Hospital Materno-Infantil Teresa Herrera, A Coruña

## Background/ Objective

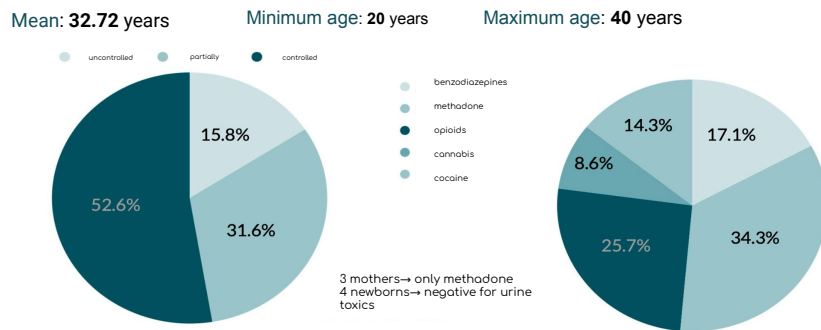

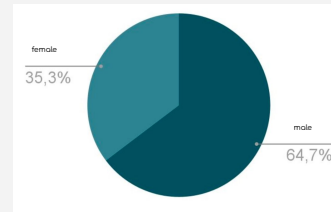

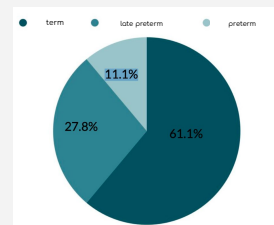

**NAS** is set of **symptoms** that appear when **interrupting intrauterine exposure to toxics**.

**Objective:** to describe the infants and maternal characteristics.

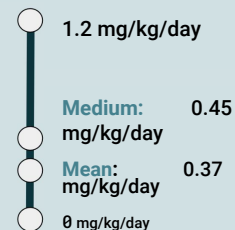

## Methods

**Retrospective descriptive** study between **2016-2021** → 18 neonates total

## Results

Maximum morphine dosage (mg/kg/day)

## Conclusion

it is important to make a good anamnesis for an early detection to establish the necessary therapeutic measures
