

Editor-in-Chief: Frank Witlox

European Transport Research Review

An Open Access Journal

European Transport Research Review (ETRR) is a peer-reviewed open access journal publishing original high-quality scholarly research and developments in areas related to transportation science, technologies, policy and practice. Established in 2008 by the European Conference of Transport Research Institutes (ECTRI), the Journal provides researchers and practitioners around the world with an authoritative forum for the dissemination and critical discussion of new ideas and methodologies that originate in, or are of special interest to, the European transport research community. The journal is unique in its field, as it covers all modes of transport and addresses both the engineering and the social science perspective, offering a truly multidisciplinary platform for researchers, practitioners, engineers and policymakers. ETRR is aimed at a readership including researchers, practitioners in the design and operation of transportation systems, and policymakers at the international, national, regional and local levels.

ETRR covers the following main areas of interest: Mobility and travel behavior
Transportation safety and security
Transportation economics
Transportation planning and policy
Human factors in transportation
Traffic and demand management
Intelligent Transportation Systems (ITS)
Freight transport and logistics
Air and waterway transport
Transportation impacts of emerging vehicle technologies
Environmental issues in transportation and climate change
Equity, social and health issues related to transport

Examples of particular topics of interest are: urban logistics, intermodal transport systems, transitions towards sustainable transport, accessibility and equity analysis, technologies for improving network and vehicle efficiency, advances in integrated transport systems and intermodal transportation, traffic safety analysis, traffic flow theory and modeling, IT technologies for transport data collection and analysis, strategies for vehicle-to-vehicle communications and the transport impacts and indirect impacts of
