ReSChape

Reshaping Supply Chains
for positive social impact

This project has received funding from the European Union's Horizon Europe research and innovation programme under grant agreement No. 101061729.

About the Project

As a result of the recent pandemic, global value chains have completely transformed. This has raised concerns over the ensuing social, economic and environmental trends and related impact on the way supply chains are organised. In this context, the **EU-funded ReSChape project** will analyse social, economic and environmental changes and disruptions, including the COVID-19 pandemic, and evaluate their impact on supply chains. New supply chain models will be proposed, aiming towards a more streamlined supply chain process to assure humans (workers, consumers and in general citizens) to be at the center of the business also thanks to new digital technologies. It will be studied how to **assure a positive social impact and innovative policy scenarios** will be developed with recommendations to support the future supply chains.

ANALYSE & EVALUATE

Analyse social, economic and environmental changes and disruptions and evaluate their impact on supply chains.

SUPPLY CHAIN MODELS

Study and propose a set of supply chain models as a way to increase EU resilience and sustainability.

POLICY SCENARIOS

Develop innovative policy scenarios with recommendations for future global value chains strategies.
