

Sheffield™ rAlbumin EG ACF

EXCIPIENT GRADE rHSA

Sheffield™ rAlbumin EG ACF is an animal component free (ACF) recombinant human serum albumin suitable for use as an excipient in the liquid formulation of protein therapeutics and vaccines. It is produced in, and extracted from, yeast in accordance with cGMP regulations.

Sheffield™ rAlbumin EG ACF protects against non-specific adsorption, aggregation, and oxidation. It is used as a stabilizer when preparing lyophilized products.

Applications

- Protein therapeutics
- Vaccines

Benefits

- Stabilizes and prevents aggregation & oxidation of therapeutic proteins in liquid formulations
- Prevents non-specific binding and protein adsorption during manufacture
