

Animal health and welfare in aquaculture: novel approaches for disease management

IGNITION

European Association
of
Fish Pathologists

EAFP Conference Aberdeen (UK)

11.09.2023
16:00 - 18:00 GMT

DISCOVER

How the COVID-19 pandemic helped boosting research on genetic vaccines in aquaculture

What aptamers are and how they can be used in fish disease diagnosis

How can probiotic bacteria complemented with phages be used efficiently in hatcheries

How the natural bioactive compounds of halophytes modulate the health of aquatic animals

How can health biomarkers be used as non-invasive disease prediction tools

How can molecular welfare biomarkers and disease phenotypes be correlated to further develop breeding programmes
