

Marion is a senior fellow at EDCTP focusing on mixed-methods research using digital health interventions. She obtained her PhD at the University of Amsterdam on research focusing on adherence to treatment among people living with HIV. Through the panacea consortium, she started working at the Kilimanjaro Clinical Research Institute in Moshi, Tanzania, where she has built a strong team of researchers and research assistants. In 2016 she was awarded a career development fellowship from EDCTP for a clinical trial investigating the effect of an internet enable medication dispenser with reminder cues and tailored feedback on adherence to treatment. She successfully completed the fellowship in 2020 when she has been awarded a senior fellowship plus from EDCTP focusing on studies using digital adherence tools for breastfeeding women, children and adolescents. Within that current fellowship, she supervises two PhD students, one in Tanzania and one in Rwanda, and two MSc students in Tanzania. Marion is also leading the KCRI team in the EA-PoC study including another PhD student. Furthermore, she has been involved in studies in digital adherence tools for TB patients and digital health tools for family planning and contraceptive use in Tanzania. Marion has a strong motivation for mentorship and supervision in order to create a pool of well-trained researchers in Tanzania.
