

WELCOME MESSAGE

It is a true honor to welcome you to the Cardiovascular Disease in Women Conference, a pioneering event in the region, held from **11th to 12th April 2025** at the **Dusit Thani, Dubai**.

Cardiovascular disease (CVD) continues to be the **leading cause of death among women globally**. Yet, the reality remains **that many women are not properly diagnosed or treated**, due to outdated perceptions and limited awareness—both within clinical settings and among the public.

One in every three women loses her life to heart disease or stroke each year. The good news? Up to **80% of these events can be prevented** through greater awareness, early intervention, and lifestyle modifications.

That's why the **Emirates Cardiac Society** has taken the lead in launching this vital initiative—to raise awareness, promote women-focused research, and improve cardiovascular care for women across the region.

This two-day conference offers a **robust scientific program** designed to tackle the most pressing issues in the field, including:

- The unique presentation and progression of CVD in women
- Advances in diagnosis, management, and prevention
- Strategies for early detection and risk reduction
- Insights into cardio-obstetrics and women's heart health across the lifespan
- Evidence-based approaches for treating arrhythmias, CAD, and heart failure in women

We are proud to host this event and bring together experts, clinicians, and changemakers who are passionate about shaping a healthier future for women. We look forward to a conference that will **be rich in knowledge, collaboration, and purpose**

With warmest regards,
Dr. Juwairia Al Ali
President, Emirates Cardiac Society
