IOP Institute of Physics

Combining optics and ultrasound leads to many powerful techniques for probing and manipulating matter. Applications are wide ranging and include medical imaging, non-destructive testing and fundamental science ranging from the macroscale down to the nanoscale.

Optics+Ultrasound V will cover all aspects of combining light and sound and we are planning to live stream the talks which we hope will open the event up to a wider audience.

The Committee have confirmed a number of expert speakers to present at the conference, these talks will be complimented by proffered papers, poster session and networking opportunities.

We hope you can join us and look forward to welcoming you to Optics+Ultrasound V!
