

Marit Øilo, DDS, PhD, spesialist in prostodontics is currently a professor of Biomaterials at The Medical Faculty, University of Bergen, Norway. Her research has focused on high strength ceramics for dental restorations with emphasis on the discrepancy between in vitro and in vivo findings. She has published several papers on fractography of larger compilations of clinically retrieved restorations as well as laboratory trials where the aim were to recreate clinical fracture modes in order to understand the stress mechanisms behind early failures.
