

# Global Wildland Fire Network

## Regional South East Asia Wildland Fire Network

**Rapporteur: Bambang H. Saharjo**

Regional Fire Management Resource Center – South East Asia

### **Retrospective 2019-2023**

- Key challenges and significant events
- Network activities
- Progress in Integrated Fire Management
- Institutional capacity building and policy development

**8<sup>TH</sup>**  
INTERNATIONAL  
WILDLAND FIRE  
CONFERENCE

## Regional South East Asia Wildland Fire Network

### Key challenges and significant events

1. Fires still continue to occur, either by the community or by corporations
2. The process of proving in court is sometimes disrupted by the failure of the judge to understand the problem that occurred
3. It is necessary to find a way out for the community not to burn but still be able to cultivate their land without burning

## Regional South East Asia Wildland Fire Network

### Key challenges and significant events

4. The government still needs a scientific base in producing its policies
5. It is necessary to increase capacity through both national and international cooperation in the process of controlling forest and land fires
6. Fire control is no longer just dealing with how to control it, but rather how to reduce the greenhouse gas emissions it produces

## Regional South East Asia Wildland Fire Network

### Networking activities

1. Conducting enlightenment to the public, both nationally and internationally, carried out online, for example through both national and international webinars
2. Conduct on-site training whether related to the use of satellites or direct field practice both nationally and internationally

## Regional South East Asia Wildland Fire Network

### Networking activities

3. Giving awards to those who have succeeded in controlling forest and land fires in collaboration with national and international CSOs
4. Carry out international cooperation in order to improve understanding skills related to extreme fires
5. Participate in international and national level meetings

## Regional South East Asia Wildland Fire Network

### Activities in actions

## Regional South East Asia Wildland Fire Network

### Progress in Integrated Fire Management

1. Draft of Indonesia's climate change law plan being prepared
2. Finalize the draft climate change law plan
3. Help develop permanent solutions to control forest and land fires
4. Peer-reviewed publications on calculating correct greenhouse gas emissions based on field facts – specifically for peatlands
5. Become a bridge of cooperation with the FIRE SIMULATOR provided by France in the Southeast Asian Countries for the first time

## Regional South East Asia Wildland Fire Network

### Institutional capacity building and policy development

- Increasing international, regional (ASEAN) and national cooperation in managing forest and land fires
- Increasing institutional capacity through training both internationally and regionally and nationally
- Giving awards to firefighters who are considered to have succeeded in controlling fires, both individuals and groups
- Preparation of an application that can be used by the public in order to make them more aware of the threat of smoke and particles in their area when a fire occurs

## Regional South East Asia Wildland Fire Network

Thanks for your kind attention – with greetings from South East Asia!
