

# ESA Mobile Raman Lidar (EMORAL) Capabilities for EarthCARE Cal/Val (EVID47)

*Afwan Hafiz, Iwona S. Stachlewska*

*L. Janicka, D.M. Szczepanik, M. Karasewicz, R. Fortuna, Z. Rykowska, P. Poczta, I. Okraska*

**University of Warsaw, Faculty of Physics, Institute of Geophysics, RS-Lab**

*with acknowledgements to Raymetrics S.A., CARS team at INOE, and SCC team at CNR-IMAA*

1<sup>st</sup> ESA-JAXA EarthCARE In-Orbit Validation Workshop  
14 – 17 January 2025 | VIRTUAL EVENT

# Introduction

## Objectives:

- EMORAL products for EarthCARE missions
- Overpass measurement can be collected:
  - as close as possible
  - in different environments

EarthCARE/EMORAL  
collocation measurements

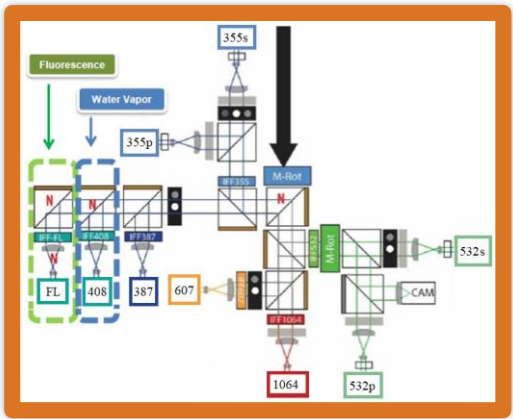

# Introduction

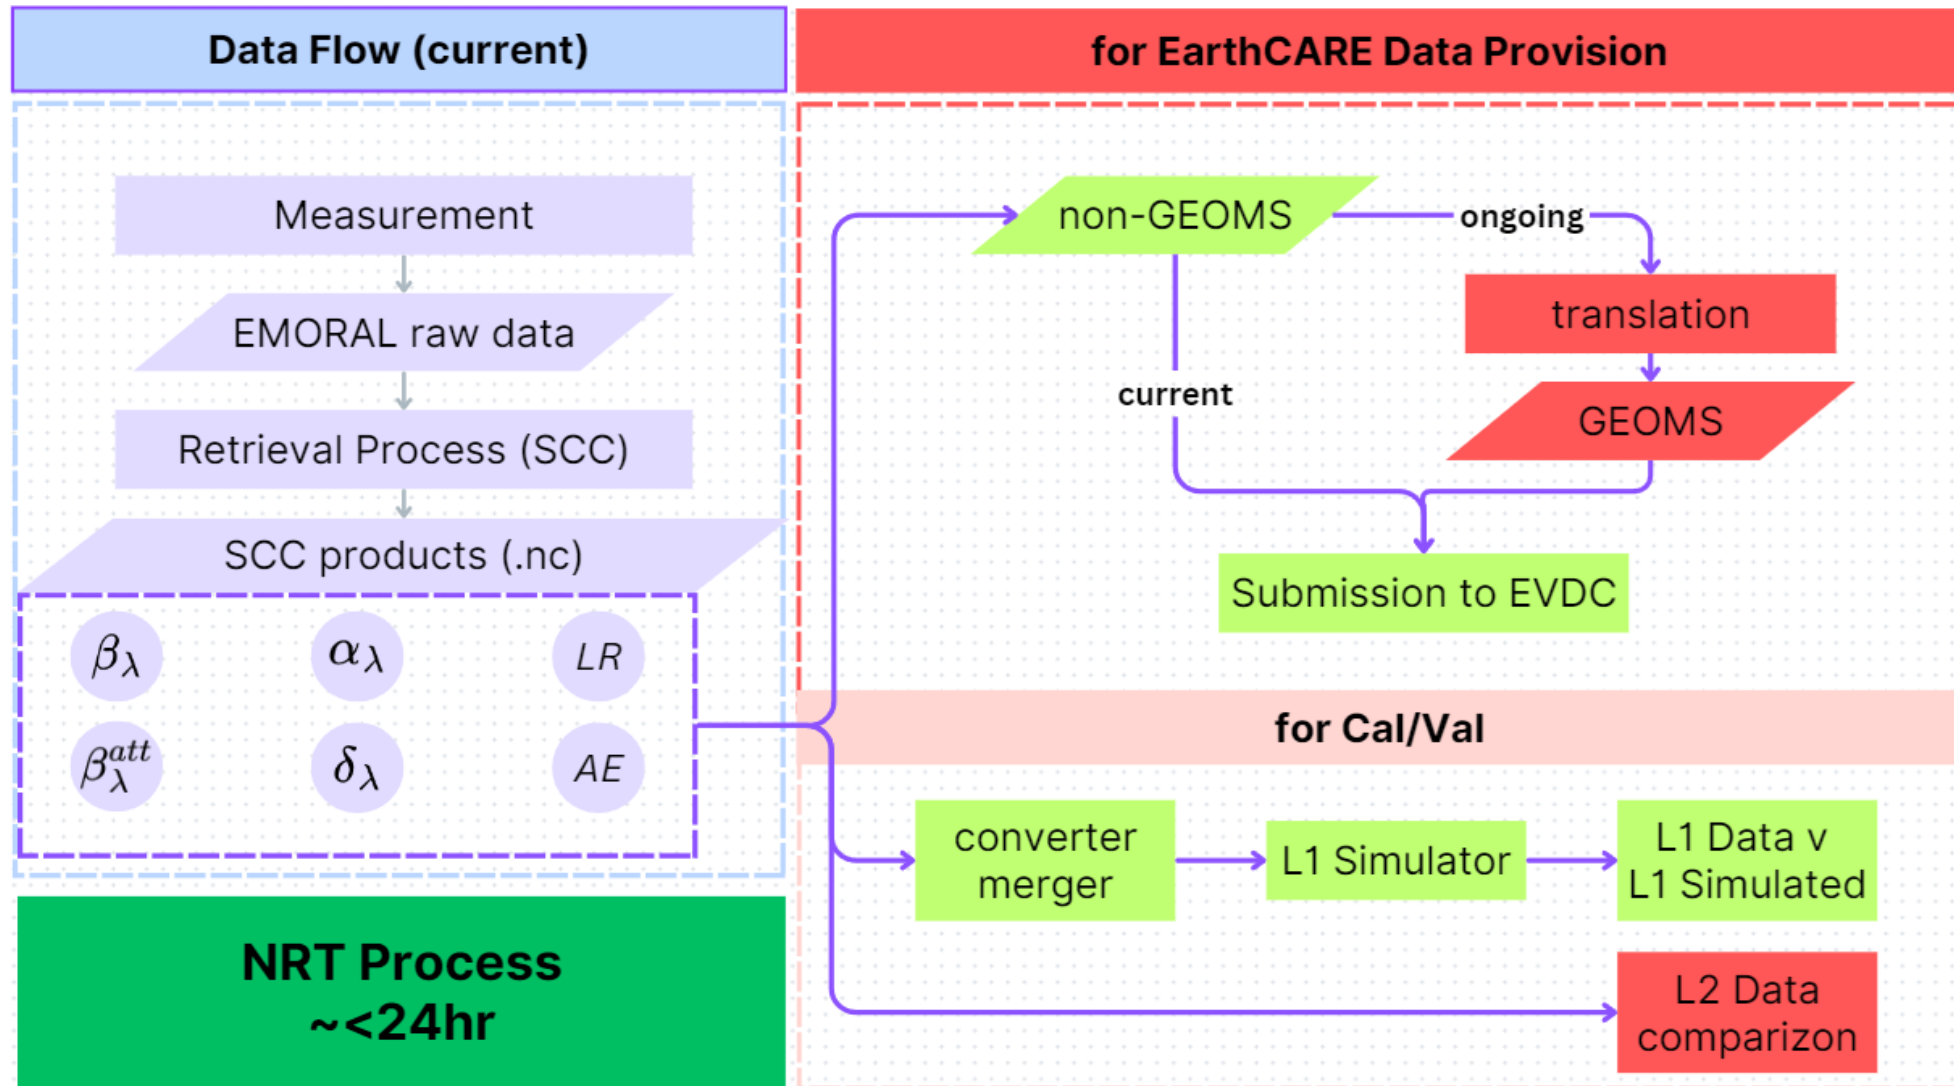

↑ 355
 ↑ 532
 ↑ 1064
 pulsed laser wavelengths

355 -p,-s	387	
532 -p,-s	408	470
1064	607	

**Detection Configuration:**  
( $3\beta$ ,  $2\alpha$ ,  $2\delta$  + WV + Flu.)

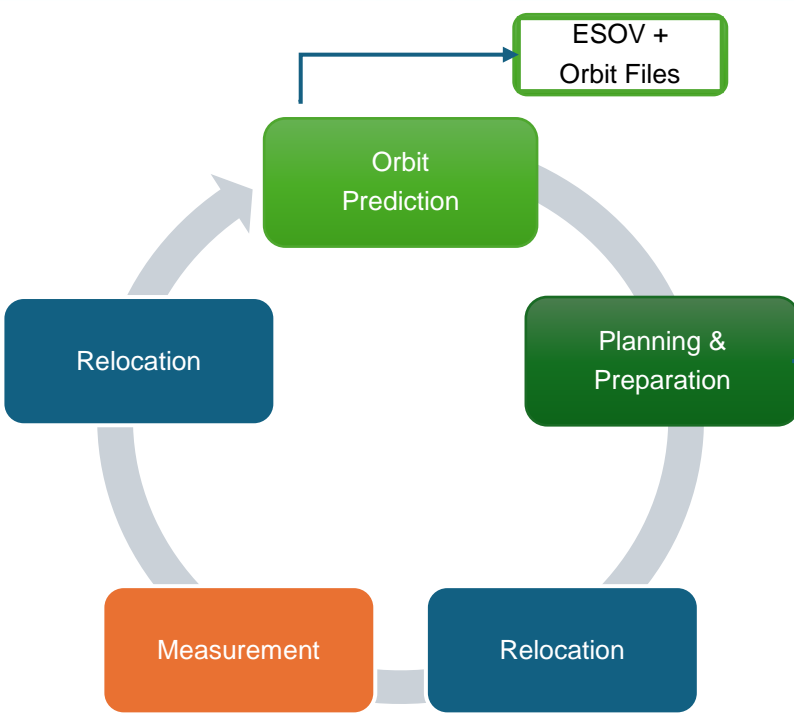

# Introduction

# Overpass Campaigns

- Several overpass campaigns during commissioning phase
- Distance between sites to predicted orbits ranging from <1km to 40km

Start Time (UTC)	End Time (UTC)	Orbit #	LON	LAT	Location
<a href="#">2024-08-25T00:17:36Z</a>	<a href="#">2024-08-25T00:17:49Z</a>	1370	17.090144	51.104589	Wroclaw (mobile, nearby)
<a href="#">2024-08-28T13:27:16Z</a>	<a href="#">2024-08-28T13:27:29Z</a>	1425	17.090144	51.104589	Wroclaw (mobile, nearby)
<a href="#">2024-10-19T13:14:13Z</a>	<a href="#">2024-10-19T13:15:32Z</a>	2234	19.206600	49.745600	Tresna (mobile, nearby)
<a href="#">2024-10-23T00:12:17Z</a>	<a href="#">2024-10-23T00:13:35Z</a>	2288	16.898600	54.577200	Przewloka (mobile, nearby)

<a href="#">2024-11-19T00:00:37Z</a>	<a href="#">2024-11-19T00:02:45Z</a>	2708	20.7354	52.0113	Ojrzanow (mobile, nearby)

**EarthCARE/EMORAL collocation measurements**

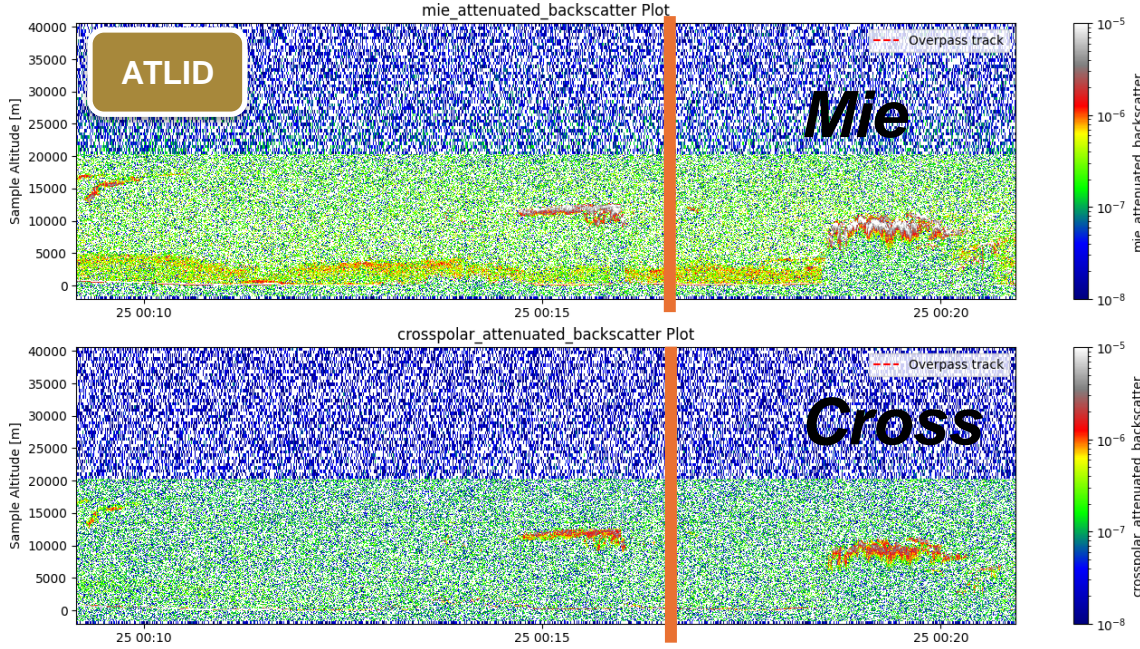

# Cal/Val Efforts: Case 1

- SARA Atmo-Access TNA with EarthCARE overpasses in Wrocław, West-Southern Poland
- Several days of measurements
  - Rare 3 Overpasses: 19/8 bad weather, 25/8 nighttime, 28/8 daytime
  - ++ Information on the atm. conditions

Wrocław\_AUG\_2024\_TNA\_SARA - Quicklook of 15km RCS - 0355\_p\_ph  
20/08/2024 12:41:56 - 28/08/2024 20:02:50

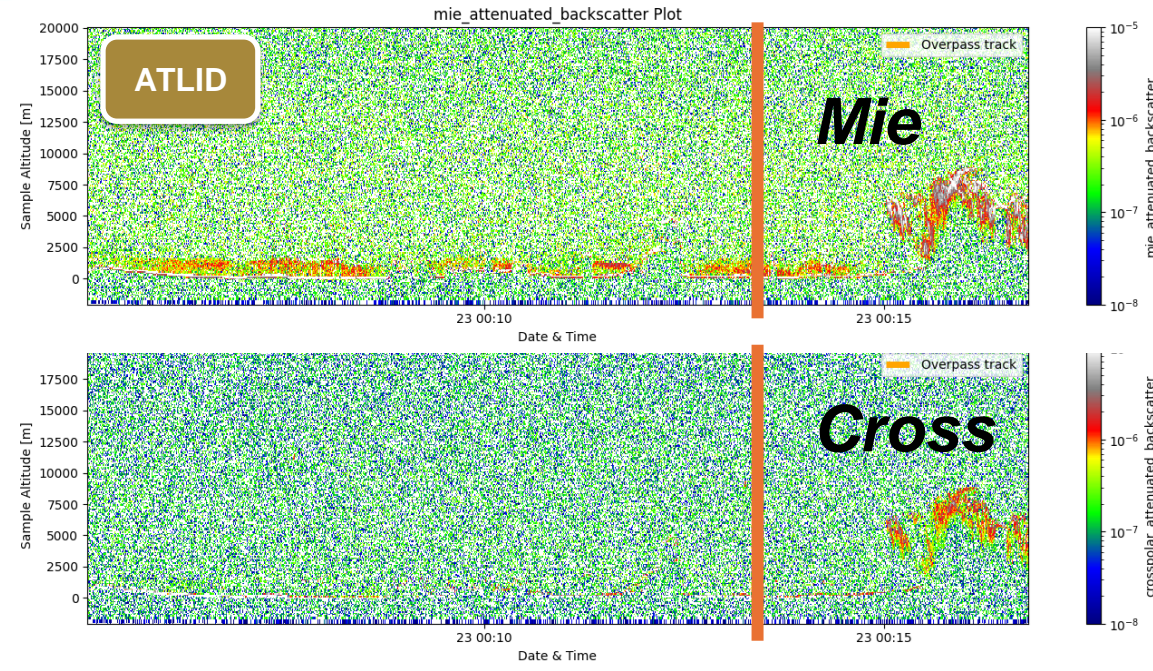

**Case 1:**  
- Distance is bigger with real orbit  
~20km → ~35km

# Cal/Val Efforts: Case 2

- Dedicated Overpass Campaign in Przewłoka, North Poland
- 2 Overpasses close in time:
  - 23/10 nighttime (fog very close to surface)
  - 24/10 daytime

**Case 1:**  
 - Distance is closer with real orbit  
 ~1km → ~0.3km

# Cal/Val Efforts: Case 3

- Dedicated Overpass Campaign in Wzdół, Southern Poland
- 1 Overpass close in time:
  - 19/11 nighttime, strong aerosol load close to the surface

**Case 3:**

- Same distance (prediction v real) **~11km → ~11km**

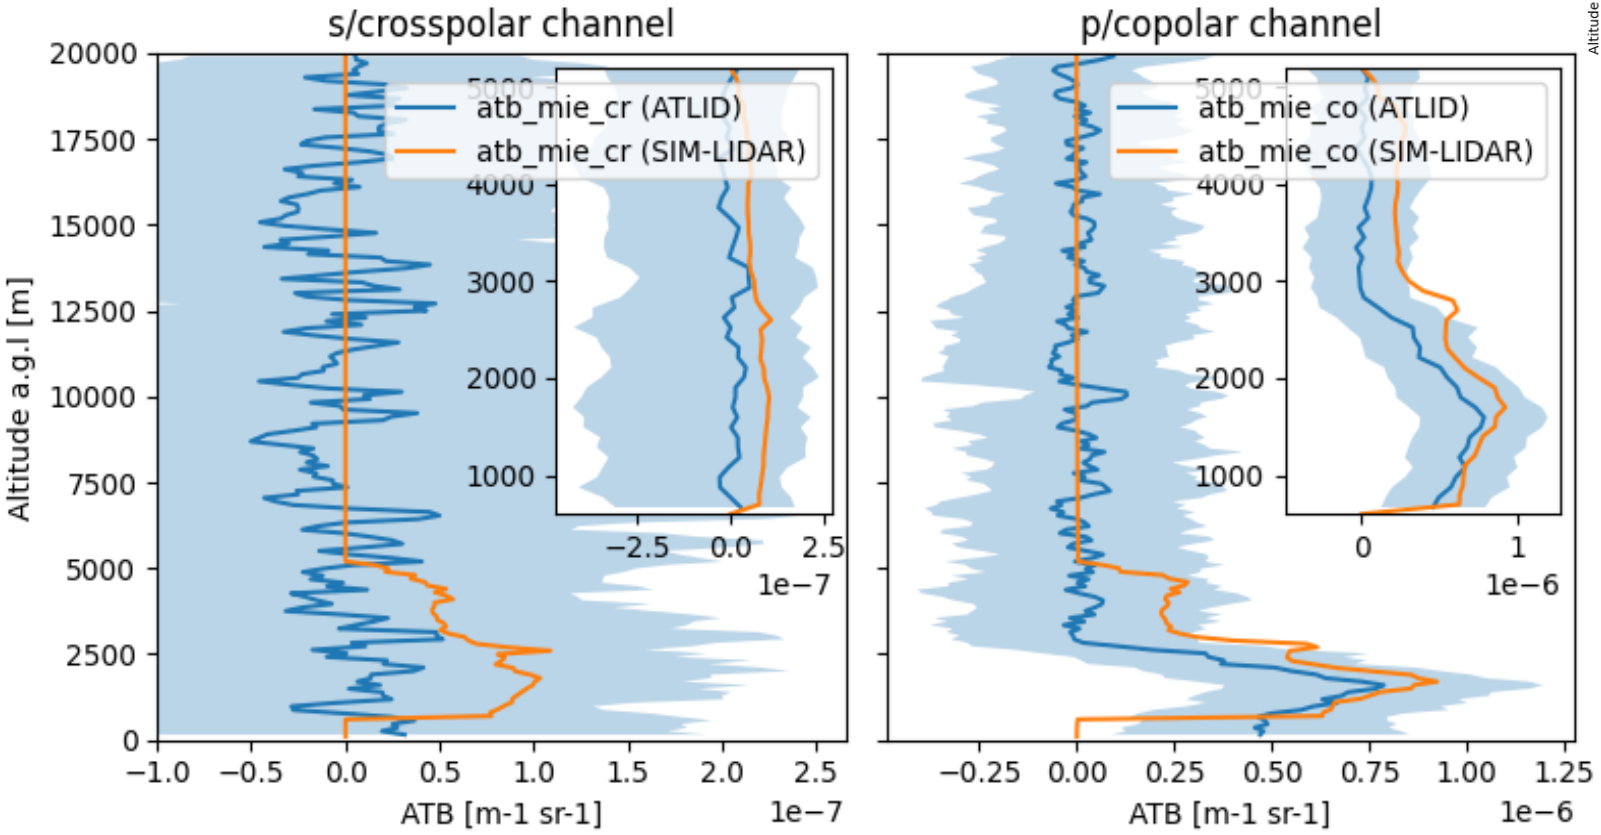

# EMORAL v ATLID L1 Comparison

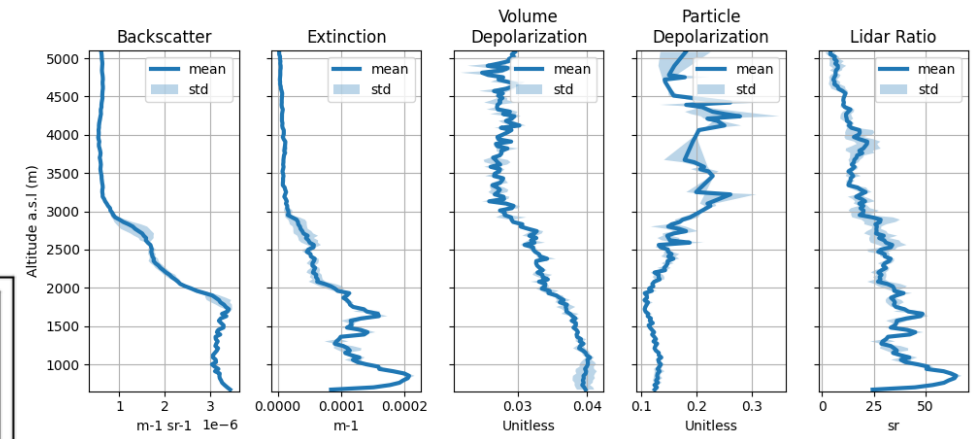

**L1-tool: only nighttime tested**

L1 Data Comparison of ATLID v simulated ATLID (LIDAR)  
 Wroclaw: 2024-08-25 00:16:38.815769984  
 34907.16 m from the ground site to orbit

Start Time: 20240824T235905Z, End Time: 20240825T005945Z

**L1-tool Input:**

- 1h profile (during overpass)
- Filtered to 5100 m
- More filters criteria for future comparison

**ATLID Data:**

- Distance ~34.9km
- Average 18 profiles
- 35.1 km radius from ground-based site

**Comparison:**

- Similar trend for co-polar
- Difficulties for cross-polar channel
- ATLID values lower for both channels

# EMORAL v ATLID L1 Comparison

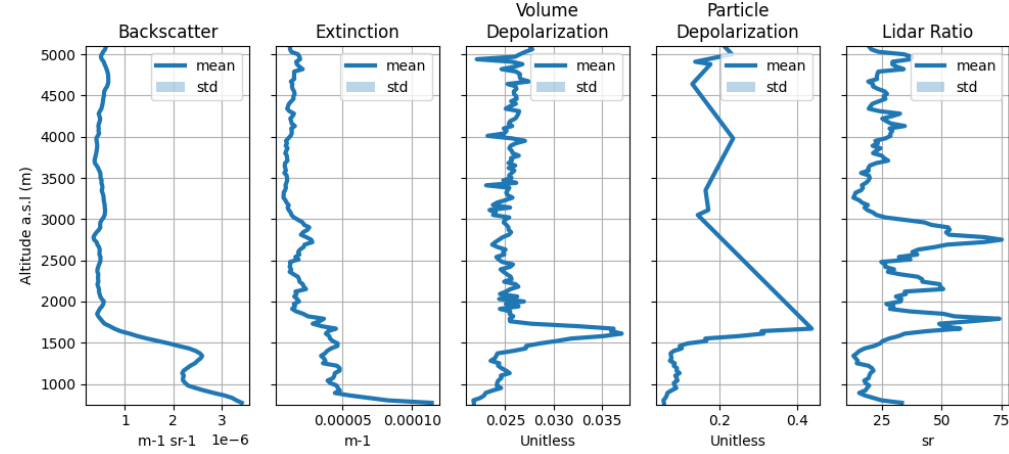

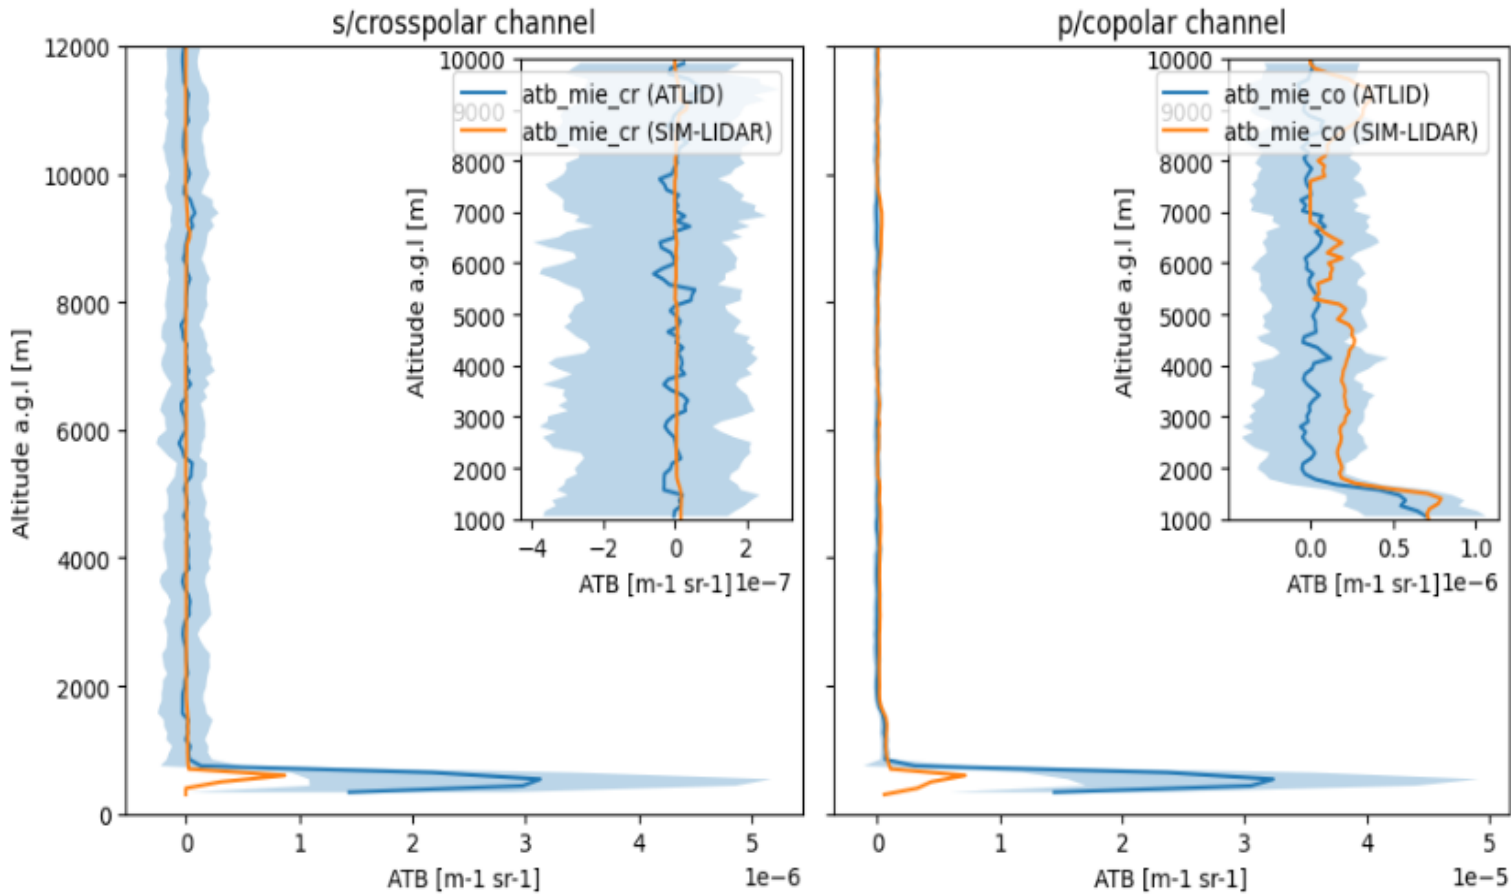

**L1-tool: only nighttime tested**

**Optimizing SCC retrieval needed**

L1 Data Comparison of ATLID v simulated ATLID (LIDAR)  
 Przewłoka 2024-10-23 00:13:24.307325184  
 271.97 m from the ground site to orbit

Start Time: 20241022T235958Z, End Time: 20241022T235958Z

**L1-tool Input:**

- 1h profile (during overpass)
- Layer (cloud/fog) close to surface

**ATLID Data:**

- Closest point ~271 m
- Average of 14 profiles
- 2 km radius from ground-based site

**Comparison:**

- Similar trend for co-polar at low altitude (spike), ATLID with lower values
- Difficulties for cross-polar channel

## Challenges for Campaigns & Data provision

- Differences between predicted and real orbit
- Changing weather conditions
- SCC setup for different locations
- Delays in data provision due to lack of internet at highly remote locations

## Challenges for L1 Data Comparison

- Optimizing inputs for L1-tool
  - o Optimized retrieval
  - o More filters criteria for inputs
- Manual download the data was prone to mistakes
- Only night-time measurement presented here
  - o Daytime needs additional calculator

## Lessons learned:

- Perfect collocation is difficult
- Changing orbit affected some observations (expected to be less in the future)
- (Almost) all measured data uploaded to EVDC within or close to 1 day from observations
- Extra time of measurement is needed for ensuring quality of data and their proper interpretation
- Workflow for serving cal/val is established

## Future Work:

- Compare entire overpass dataset with ATLID
- Recalculate optical products based on the newest recommended settings (ATLAS assessment)
- Better select dataset (time-slots)
- Make more comparisons with updated/other L1 and L2 products
- Automize download of data
