

CERES and EarthCARE BBR Intercomparison Opportunities

Alexander Jarnot, Mohan Shankar, Susan Thomas,

Janet Daniels, Norman Loeb

NASA Langley Research Center

1st ESA-JAXA EarthCARE In-Orbit Validation Workshop

14 – 17 January 2025 | VIRTUAL EVENT

Table of Contents

- FlashFlux
- CERES Instrument Details
- CERES Operations
- CERES – EarthCARE BBR Intercompare Opportunities
- CERES Special Pointing for EarthCare BBR

**This talk will focus on the CERES FM6 instrument aboard the NOAA-20 spacecraft*

CERES Instrument (FM6)

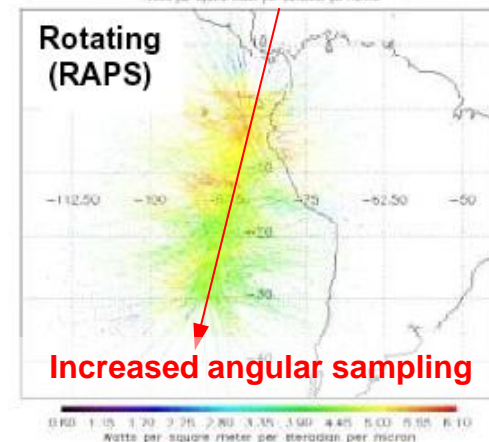

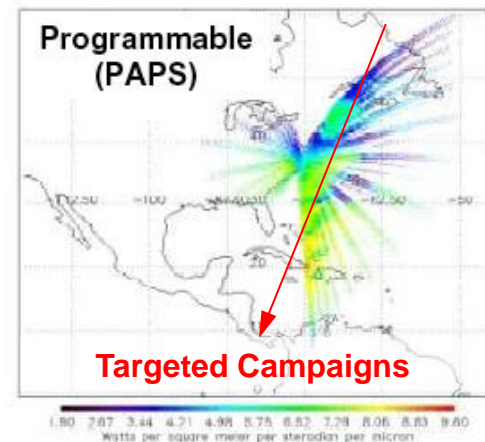

- 3-Channel Scanning Broadband Radiometer
 - Total Channel [0.3 – 200 μm]
 - Longwave Channel [5 – 35 μm]
 - Shortwave Channel [0.3 – 5 μm]
- Footprint Size: 1.3° x 2.6° hexagon
 - 24 km FOV at nadir
- 6.6s Scan Rate
 - Space Look
 - Earth Limb
 - Scan Across Earth to opposite Space Look
 - Internal Calibration
 - Repeat Back to Original Position
- 824 km orbital altitude
- 13:30 MLT equatorial crossing time

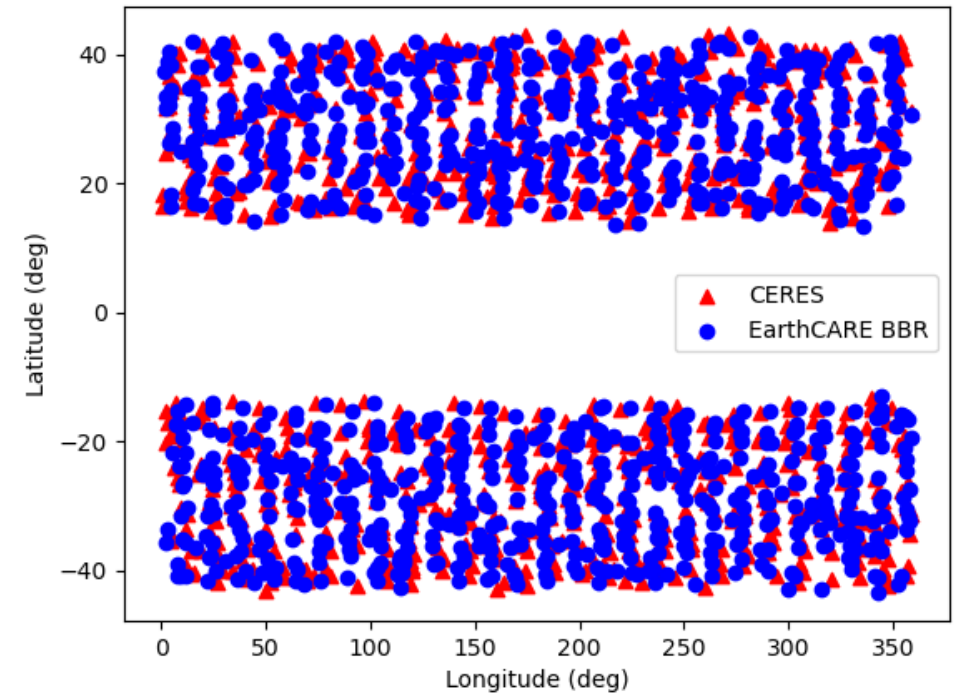

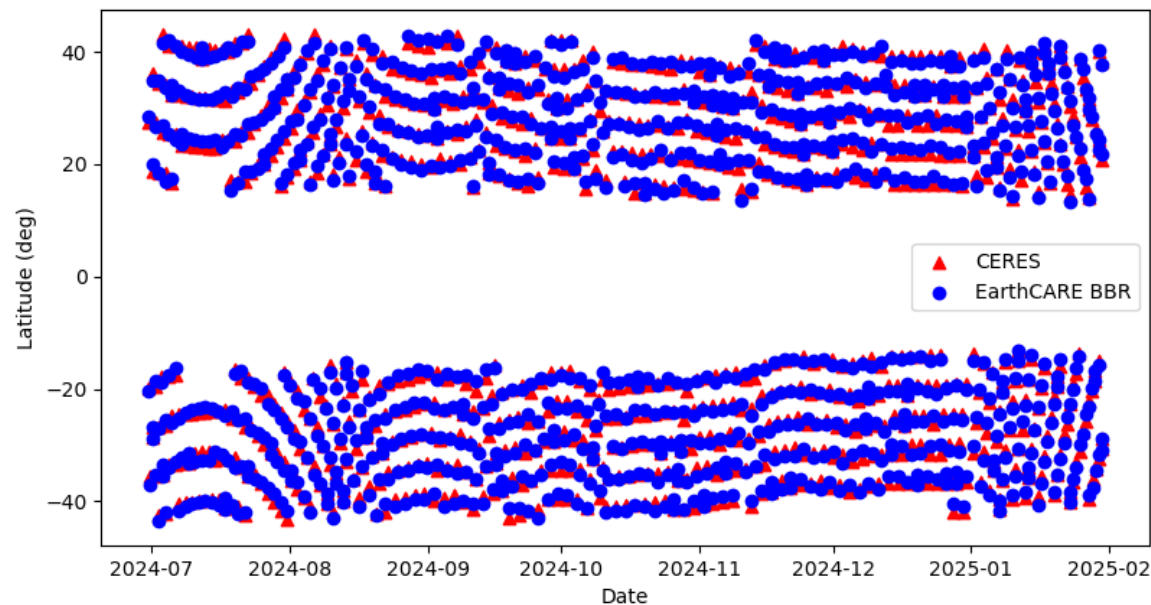

CERES Operations

- Three Scan Modes:
- Crosstrack – Elevation scan perpendicular to flight path
- Biaxial – Elevation and azimuth scan simultaneously
- Targeted – Set azimuth and elevation angles to scan targets

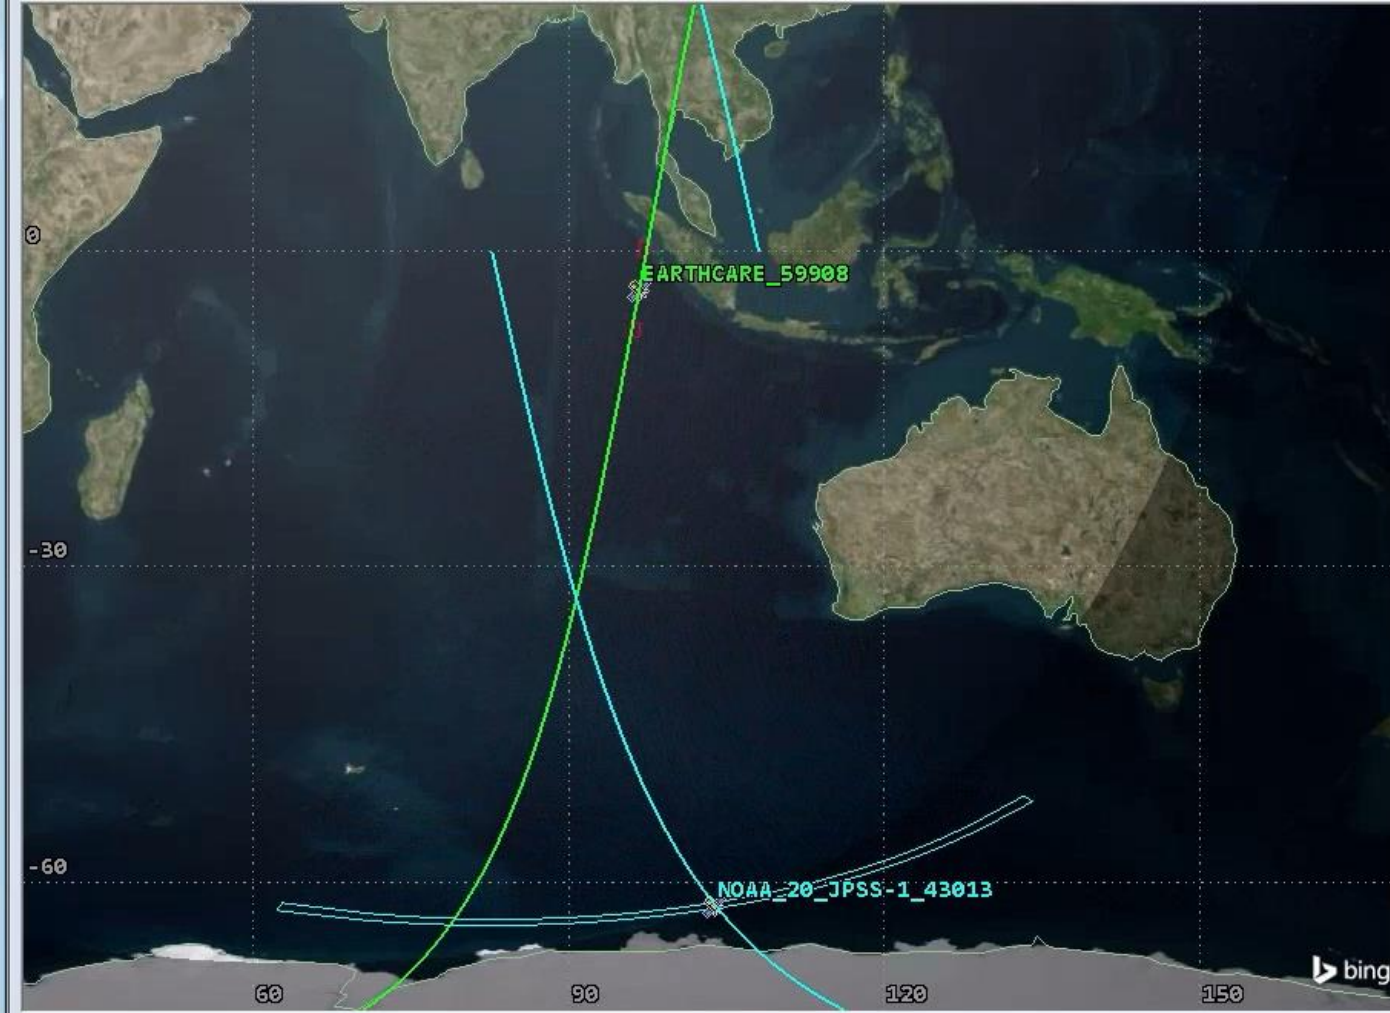

CERES/EarthCARE BBR Overlaps

- EarthCARE and CERES have frequent orbital crossings between +/- 12 – 43° latitude
- Footprint matches show excellent longitudinal coverage
- Current matching criteria:
 - $<1^\circ$ Δ Latitude
 - $<5^\circ$ Δ Longitude

CERES/EarthCARE BBR Overlaps

CERES FlashFlux Data Product

- CERES instrument calibration coefficients are updated monthly and used in the SSF product
- FlashFlux team is given radiometric gains and spectral response functions (SRFs) by instrument working group every quarter
- FlashFlux data may not be representative of the most up-to-date gains when using NOAA-20 data but will have accurate SRFs

$$I_f = \int_{\lambda=0}^{\infty} S_{\lambda} I_{\lambda} d\lambda = \frac{\text{Counts}}{G}$$

CERES Unfiltering Equation

Monthly gain coefficients
for CERES FM6 (NOAA-20)

Summary

- CERES FM6 and EarthCARE BBR have ample opportunities for crossover and intercomparison
- CERES FM6 can gimbal in azimuth to match EarthCare BBR scan angle for better footprint and angular matching
- Currently working on better matching criteria for best footprint overlap
- CERES FlashFlux product is fine to use, but SSF product will have MOST accurate data
