

# ESA-JAXA Pre-Launch EarthCARE Science and Validation Workshop

13 – 17 November 2023 | ESA-ESRIN, Frascati (Rome), Italy

**EVID36 (A070173):** validation and evaluation of the EarthCARE aerosol products.

**AVE-ECARE:**

*Larisa Sogacheva  
Finnish Meteorological Institute*

The proposed work is aimed at the validation and evaluation of EarthCARE products with the main focus on the aerosols.

Validation of aerosol products will be performed to

- (i) identify the level of confidence
- (ii) identify (provide to users) products limitations
- (iii) advice product providers on directions for product further development

- **ATLID aerosol parameters (KNMI)**

Extinction, backscatter, and depolarisation for aerosol regions, **aerosol layer information, aerosol type**

- **ATLID aerosol layer descriptors (TROPOS)**

**Aerosol layer top/base height, optical thickness**, extinction, backscatter, depolarisation

- **MSI aerosol optical thickness (FU Berlin)**

**Aerosol optical thickness at 670 nm (land and ocean) and at 865 nm (ocean only)**

- **ATLID/MSI aerosol column descriptor (Tropos)**

**Aerosol optical thickness at 355 and 670 nm (land and ocean) and at 865 nm (ocean only), corresponding Angstrom exponents, aerosol type**

- **ATLID/CPR/MSI composite product (Environment Canada )**

Cloud water/ice content, cloud particle size, **aerosol optical depth at 355 nm, aerosol type**

# Reference products

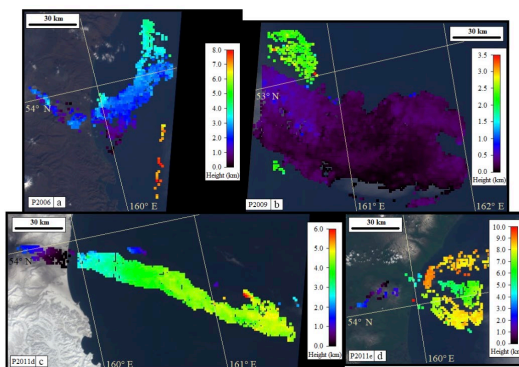

AERONET ground based observations and other similar aerosol products retrieved from satellites (e.g., MODIS for column AOD, Calipso\*, Icesat-2, MISR, Tropomi, PACE and for aerosol vertical profile (ALH)).

- \*Calipso is not in operation since 01.08.2023
- ALH from GEO satellites (Sentinel-4, GEMS, TEMPO)
- High Spectral Resolution Lidar (HSRL-2)

## GEMS ALH

[10.5194/acp-18-3903-2018](https://doi.org/10.5194/acp-18-3903-2018)

<https://aeronet.gsfc.nasa.gov/>

## For column AOD

- ESA/Copernicus LAW project (validation of Sy\_2\_AOD product) – has not been finalized
- ESA OPT\_MPC project – further development

## Data collection and matchup

- AERONET data in time window  $\pm 30$  min around satellite overpass
- satellite data in XXX km radius around AERONET stations will be collected and utilized

## Validation approaches

- Statistical analysis
- Temporal and spatial distribution
- Analysis of factors possibly influencing product quality

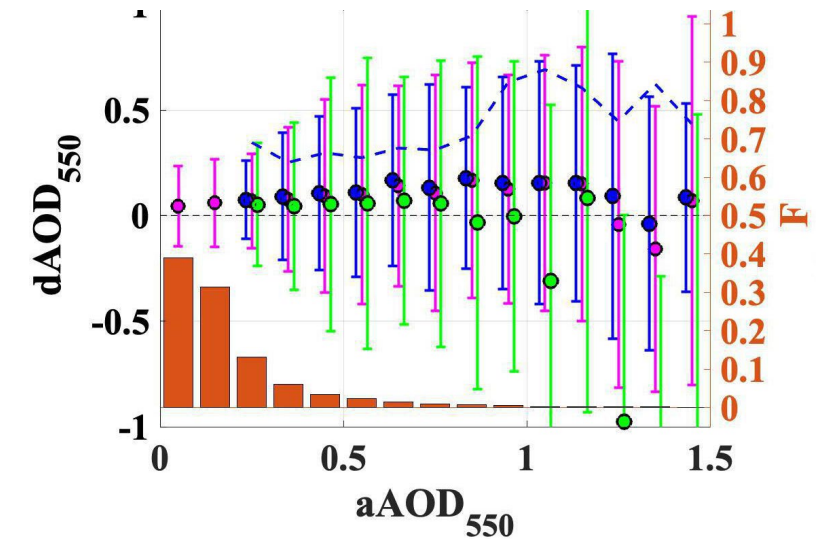

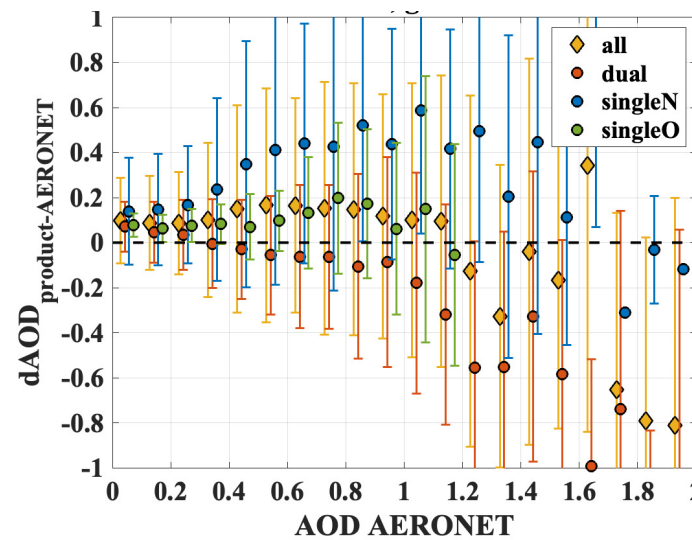

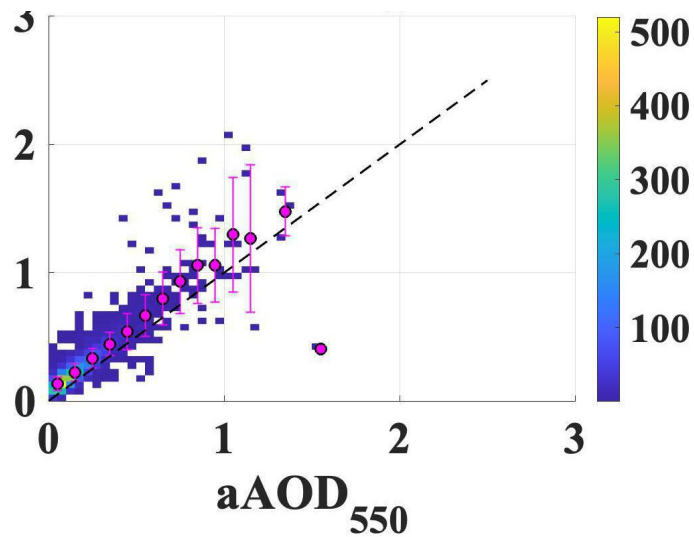

## Important to know

- Instrument specifications
- Retrieval approaches/assumptions

# Examples for visualization of validation results (1)

## Statistical analysis

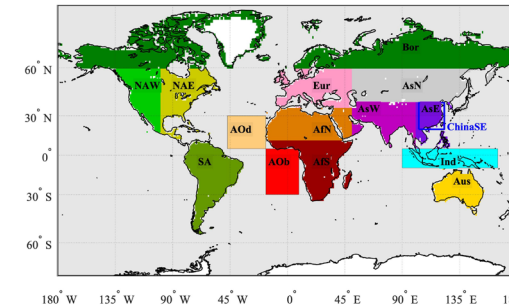

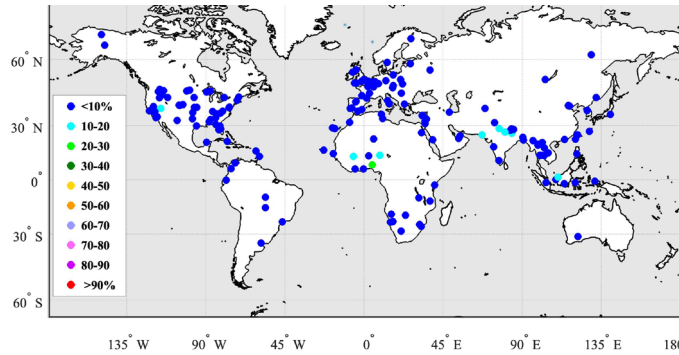

Sogacheva et al., 2022  
<https://doi.org/10.5194/amt-15-5289-2022>

# Examples for visualization of validation results (2)

## Temporal and spatial distribution

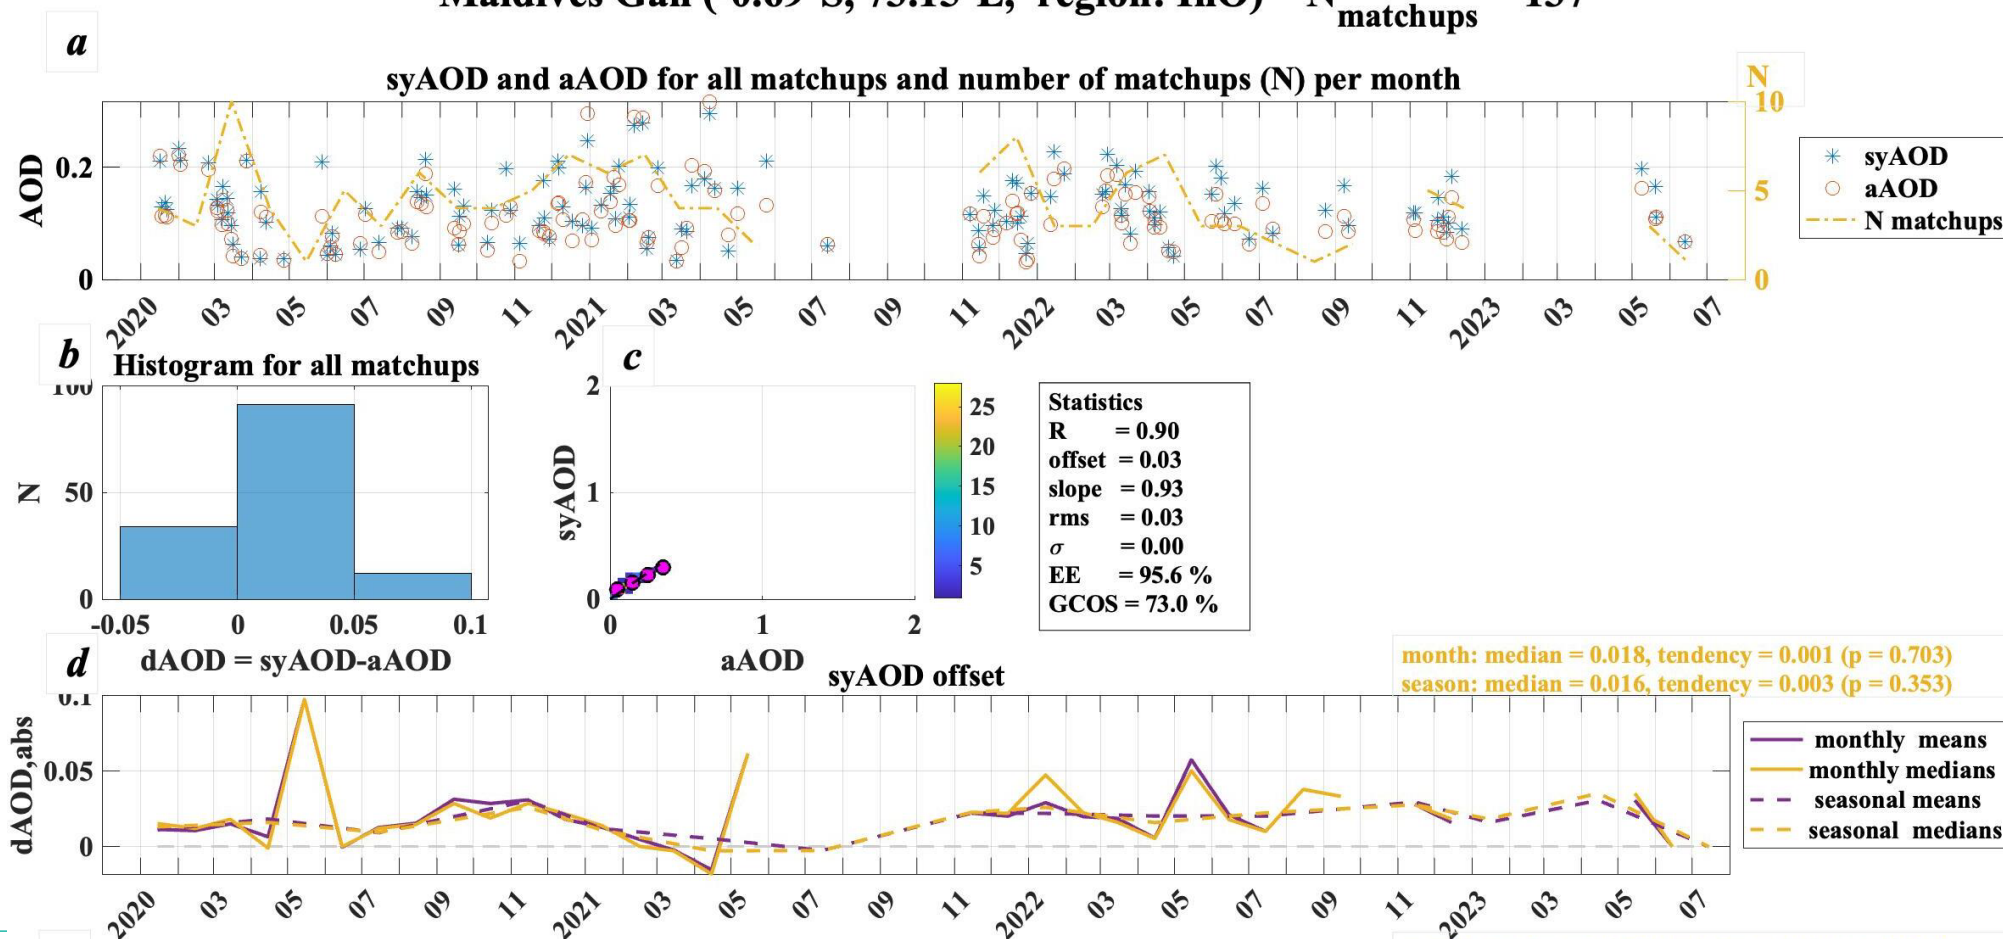

Sogacheva et al., 2022  
<https://doi.org/10.5194/amt-15-5289-2022>

# Examples for visualization of validation results (3)

## Per station analysis

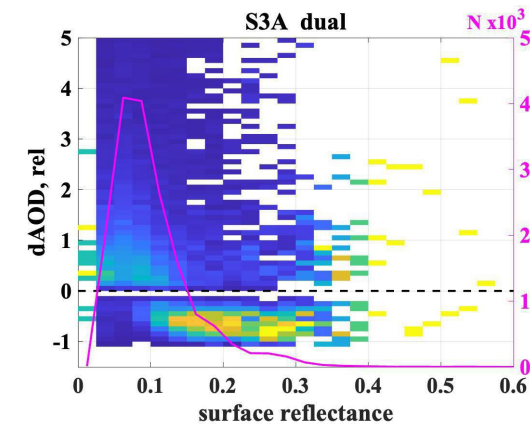

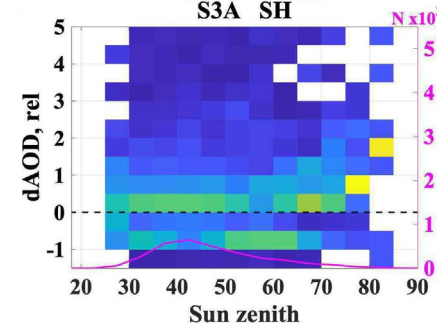

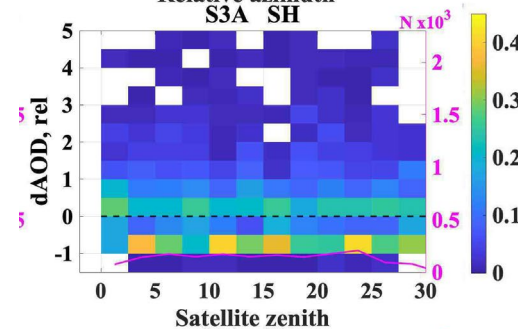

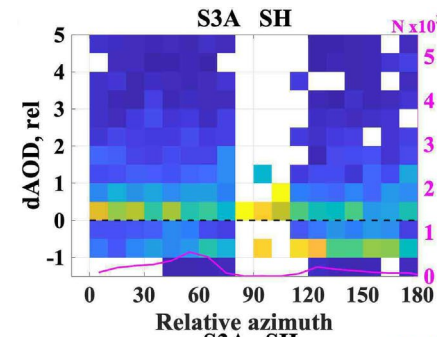

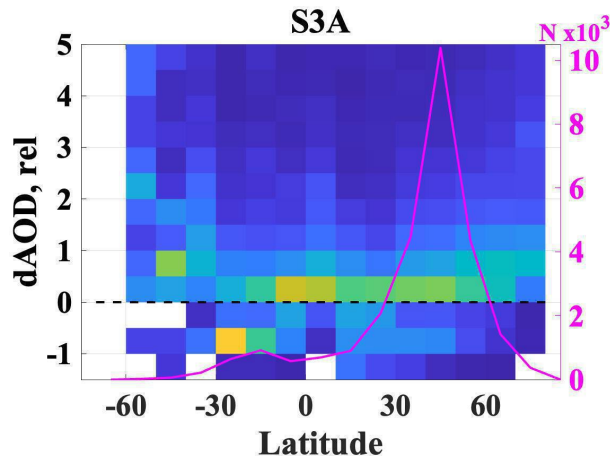

Maldives Gan ( $-0.69^{\circ}$  S,  $73.15^{\circ}$  E, region: InO)  $N_{\text{matchups}} = 137$

# Examples for visualization of validation results (4)

Impact of, e.g.,  
geometry/  
aerosol types/  
surface reflectance

Sogacheva et al., 2022  
<https://doi.org/10.5194/amt-15-5289-2022>

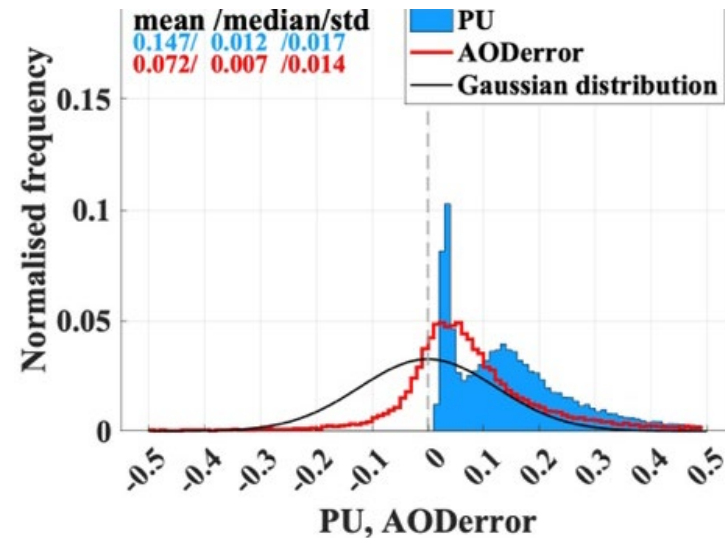

# Examples for visualization of validation results (5)

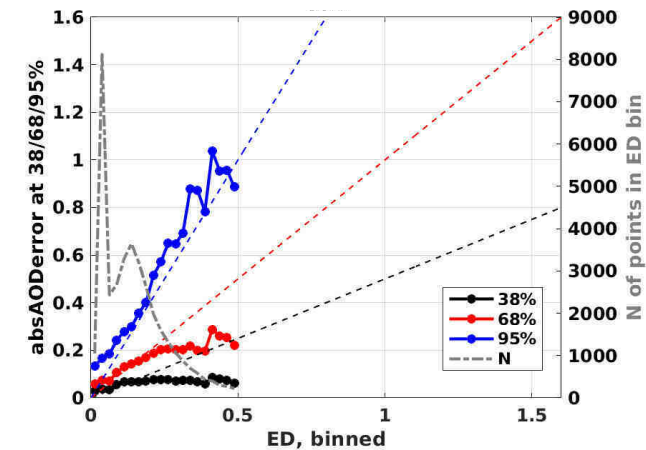

## Validation of AOD uncertainties

$\chi^2$  test

Prognostic uncertainties  
AOD error  
Gaussian distribution

Potential of  
Expected Discrepancy

Sogacheva et al., 2022  
<https://doi.org/10.5194/amt-15-5289-2022>

- Column aerosol validation approaches have to be adapted for EarthCARE
- Consider lessons learnt from the validation / evaluation of Calipso products
  - Explore funding opportunities

## Thank you for your attention
