

## MSI early Level 2 products

*Anja Hünenbein, Nicole Docter, Sebastian Bley, Rene Preusker and Gregor Walter*

*TROPOS / FU-Berlin*

1<sup>st</sup> ESA-JAXA EarthCARE In-Orbit Validation Workshop

14 – 17 January 2025 | VIRTUAL EVENT

# MSI level 2 products M-CM, M-COP and M-AOT

## MSI L2 products since July until now

### M-CM

the cloud mask product

**cloud\_mask**  
**cloud\_type**  
**cloud\_phase**  
**surface\_classification**

**quality status**  
**cloud\_mask\_quality\_status**  
**cloud\_type\_quality\_status**  
**cloud\_phase\_quality\_status**

Hünerbein, A. et al., 2023  
<https://doi.org/10.5194/amt-16-2821-2023>

### M-COP

the cloud optical and physical properties product

**cloud\_optical\_thickness**  
**cloud\_effective\_radius**  
**cloud\_top\_temperature**  
**cloud\_top\_pressure**  
**cloud\_top\_height**  
**cloud\_water\_path**

**cloud\_optical\_thickness\_error**  
**cloud\_effective\_radius\_error**  
**cloud\_top\_temperature\_error**  
**cloud\_water\_path\_error**  
**Quality status**

Hünerbein, A. et al., 2024  
<https://doi.org/10.5194/amt-17-261-2024>

### M-AOT

the aerosol optical and physical properties product

**aerosol\_optical\_thickness\_670nm**  
**aerosol\_optical\_thickness\_865nm**  
**angstrom\_parameter\_670nm\_865nm**

**aerosol\_optical\_thickness\_670nm\_error**  
**aerosol\_optical\_thickness\_865nm\_error**  
**quality status**

Docter, N. et al., 2023  
<https://doi.org/10.5194/amt-17-2507-2024>

SEVIRI

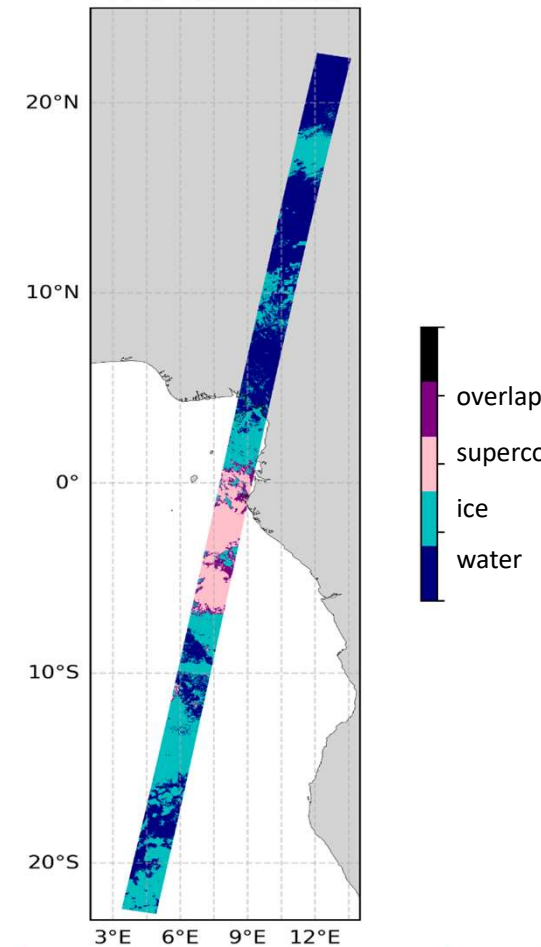

MSI

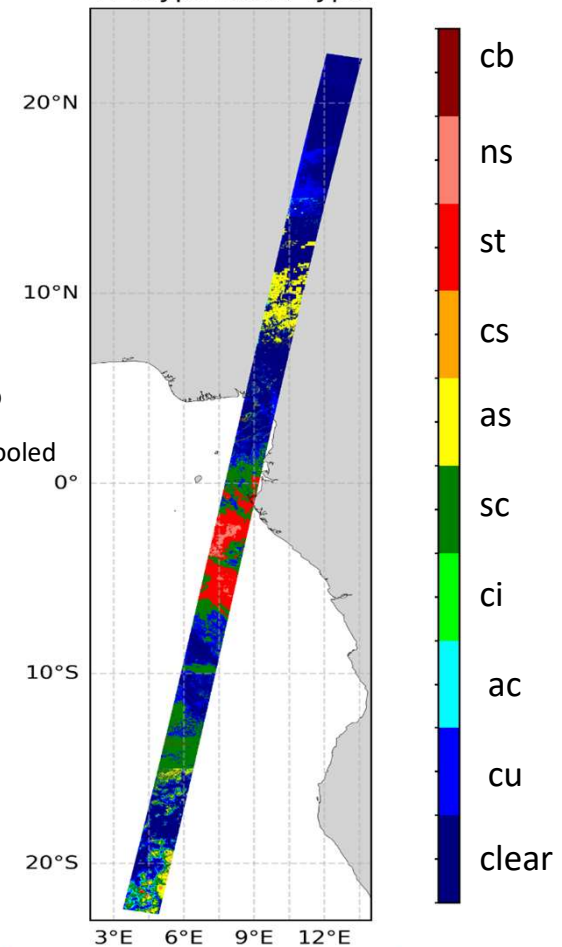

M-CM Cloud Mask

M-CP Cloud Phase

M-Ctype Cloud Type

# MSI level 2 products M-CM, M-COP and M-AOT

ECA\_EXAD\_MSI\_RGR\_1C\_20250102T132052Z\_20250102T145422Z\_03401E

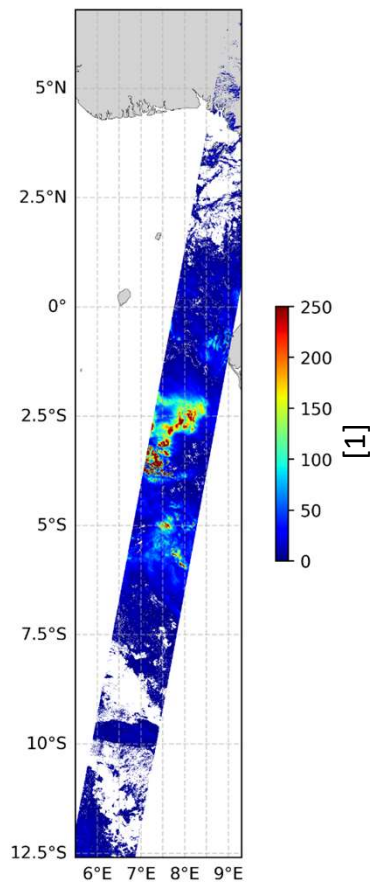

SEVIRI\_20250102T133011Z\_20250102T134243Z

2 Jan 2025, 13:25-13:29 UTC 03401E

MSI

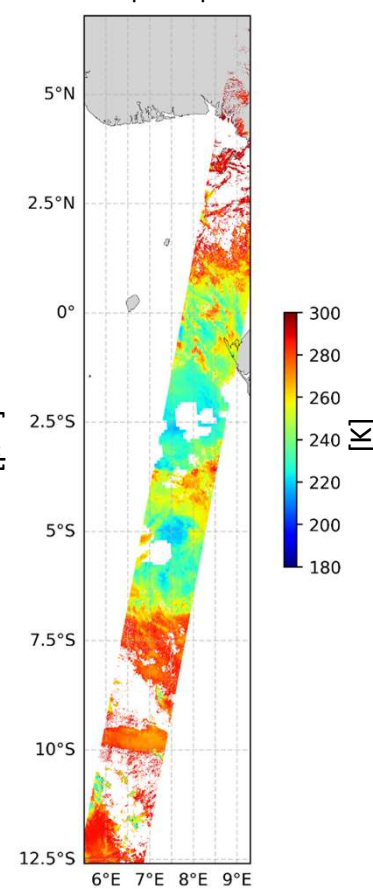

M-COT  
Cloud optical thickness

M-REFF  
Cloud effective Radius

M-CTT  
Cloud Top Temperature

M-CWP  
Cloud Water Path

# M-AOT - MSI aerosol optical thickness

2 Jan 2025, 13:25-13:29 UTC 03401E

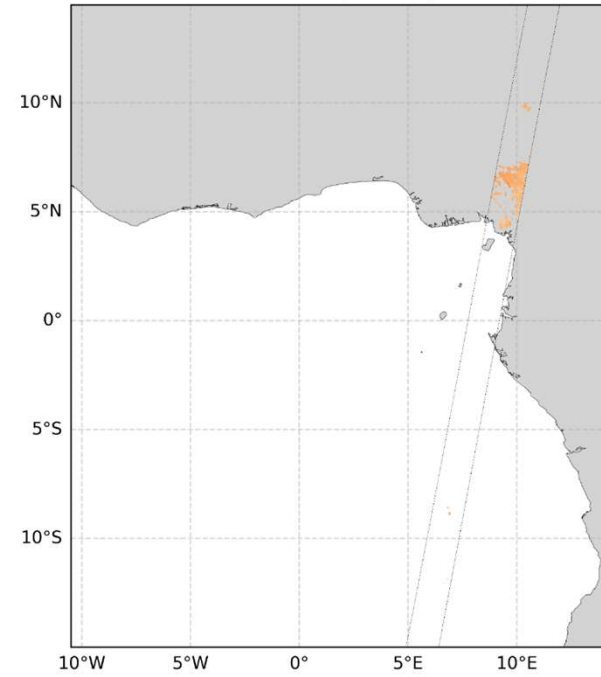

MODIS RGB and MSI false color

M-CM

M-AOT (670nm)

# M-AOT - MSI aerosol optical thickness

AOT (670 nm)

AOT (865 nm)

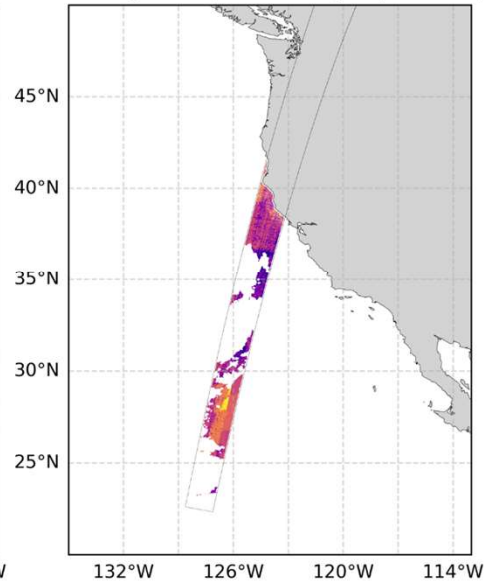

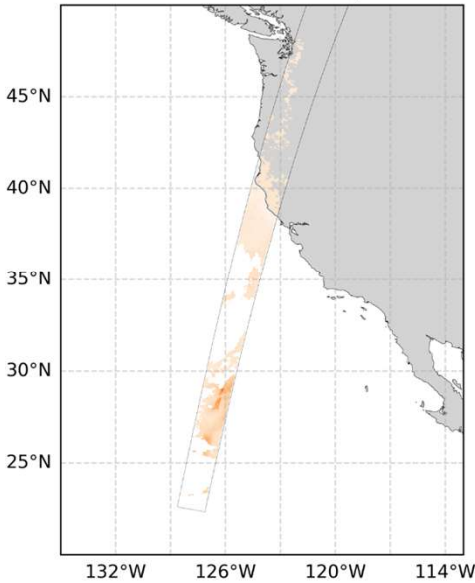

Ångström

MODIS RGB and MSI false color

MSI AOT (670 nm)

MSI AOT (865 nm)

MSI Ångström parameter (670, 865 nm)

California wildfire

# Pitfalls

For the solar channels:

**diffuser related “solar irradiance” variations in the across-track dimension are leading to a not negligible effect on cloud and aerosol products since the solar irradiance is used for the calculation of spectral TOA reflectances:**

$$\rho_{\lambda} = \frac{L_{\lambda} \cdot \pi}{I_{\lambda,c} \cdot \cos(\theta_{sol})}$$

$I_{\lambda,c}$  spectral solar irradiance for each band and MSI across-track pixel

$L_{\lambda}$  spectral radiance (pixel values for band 1 to 4) on MSI along- and across-track grid

$\theta_{sol}$  solar zenith angle

Example highlights influence of changed VIS spectral solar irradiance change specifically for M-AOT

# Pitfalls

For the solar channels:

diffuser related “solar irradiance” variations in the cross-track dimension are leading to a not negligible effect on cloud and aerosol products since the solar irradiance is used for the calculation of spectral TOA reflectances:

$$\rho_{\lambda} = \frac{L_{\lambda} \cdot \pi}{I_{\lambda,c} \cdot \cos(\theta_{sol})}$$

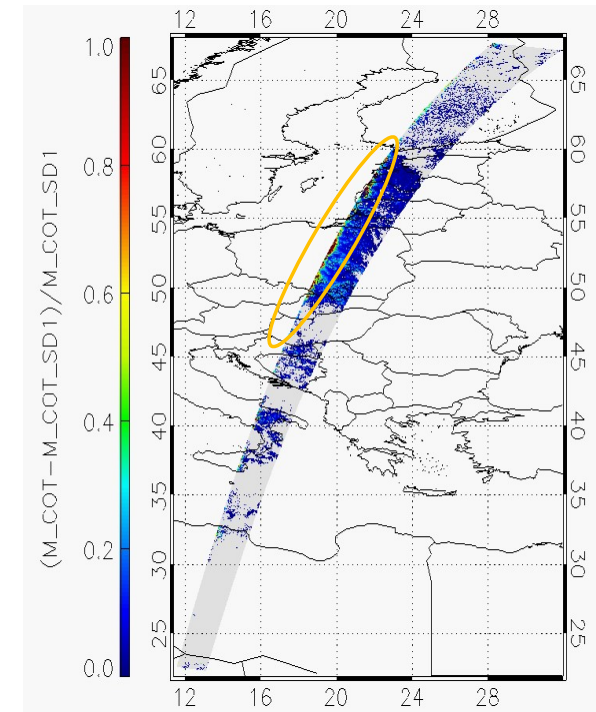

$I_{\lambda,c}$  spectral solar irradiance for each band and MSI across-track pixel

$L_{\lambda}$  spectral radiance (pixel values for band 1 to 4) on MSI along- and across-track grid

$\theta_{sol}$  solar zenith angle

- the spectral solar irradiance will be updated and corrected in the life time of MSI
- update is on the way

Example highlights influence of changed VIS spectral solar irradiance change specifically for M-COT relative differences M-COT

# M-COP vs SEVIRI

ECA\_EXAD\_MSI\_RGR\_1C\_20250102T132052Z\_20250102T145422Z\_03401E  
SEVIRI\_20250102T133011Z\_20250102T134243Z

2 Jan 2025, 13:25-13:29 UTC 03401E

MSI

# M-CM vs MODIS

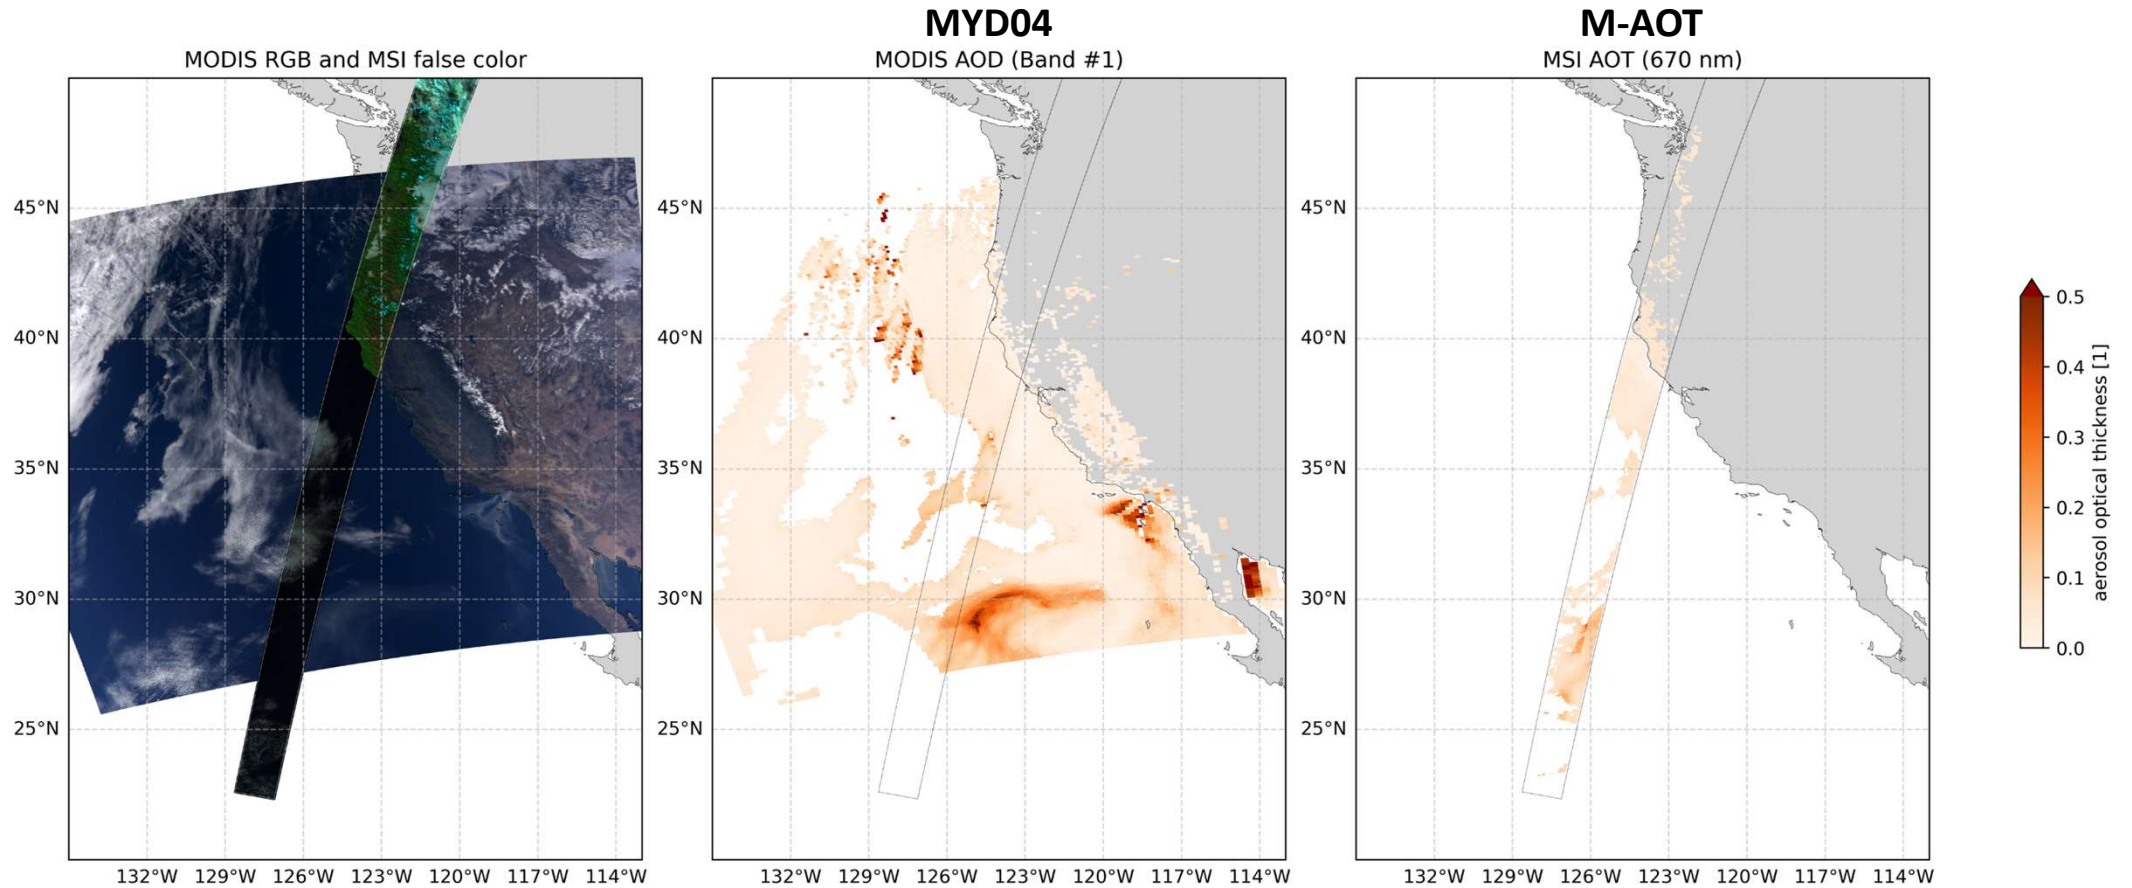

Geostationary SEVIRI/ polar orbiting MODIS (Aqua 30min differences)

## Cloud mask

01/01/2025 frame 03390E

# M-AOT vs MYD04\_L2

09/01/2025 frame 03516D

# MSI L2 validation needs

Usage of all types of reference data, e.g.,

- ground-based measurements (AERONET, ACTRIS, etc.)
- satellite-based (e.g., MTG-FCI, Sentinel-2 MSI, MODIS, VIIRS, etc.)
- airborne-based

Separation of validation results with respect to geophysical conditions, e.g.,

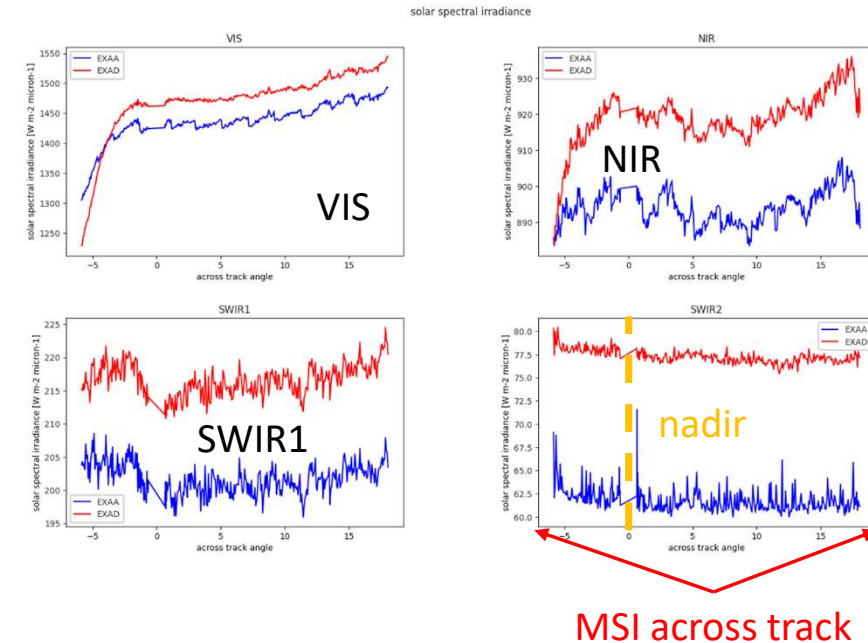

- cloudiness
- surface type (different biomes: ocean, vegetated land, desert, ice, snow, etc.)
- day-night
- (e.g., frame-based)
- etc.

Consideration of the across-track dependency wherever possible, due to effects caused by

- MSI diffuser dependency of the spectral solar irradiance
- MSI smile (Docter et al. 2024)

## EXAA vs EXAD

ECA\_EXAA\_MSI\_RGR\_1C\_20240821T163040Z\_20240821T225136Z\_01318E  
ECA\_EXAD\_MSI\_RGR\_1C\_20240821T163040Z\_20241030T123829Z\_01318E

# Thank you!
