# Things changed

www.eumetsat.int

- More computing power → Wider addressable community
  - Higher urgency of climate change → Greater interest in our products
  - More missions → More observable variables and, thus, users
  - More capable infrastructure → Greater demand for Internet-based access
- And then there was the draw of possibility...

# Our organisation's been changing too

[www.eumetsat.int](http://www.eumetsat.int)

## SENTINEL-3A & -3B (98.7° incl.)

Low Earth, sun-synchronous orbit

Copernicus satellites delivering marine data services from 814km altitude

## JASON-3 (63° incl.)

Low Earth, non-synchronous orbit

Copernicus ocean surface topography mission (shared with CNES, NOAA, NASA and Copernicus)

## Sentinel-6 Michael Freilich (66° incl.)

Low Earth, non-synchronous orbit

Copernicus ocean surface topography mission (shared with NASA, NOAA, ESA and Copernicus with support from CNES)

Geostationary orbit

Meteosat Second Generation

Two-satellite system

Full disc imagery mission (15 mins)  
(Meteosat-11 (9.5° E))

Rapid scan service over Europe (5 mins)  
(Meteosat-10 (0°))

## METEOSAT-9 (45.5° E)

Geostationary orbit

Meteosat Second Generation  
providing Indian Ocean  
data coverage

## METOP-B & -C (98.7° incl.)

Low Earth, sun-synchronous orbit

EUMETSAT Polar System (EPS)/  
Initial Joint Polar System

## Meteosat-12 (0°)

Geostationary orbit

Meteosat Third Generation imaging mission,  
operational since 4 December 2024

## MTG-S1 (3.4° W)

Geostationary orbit

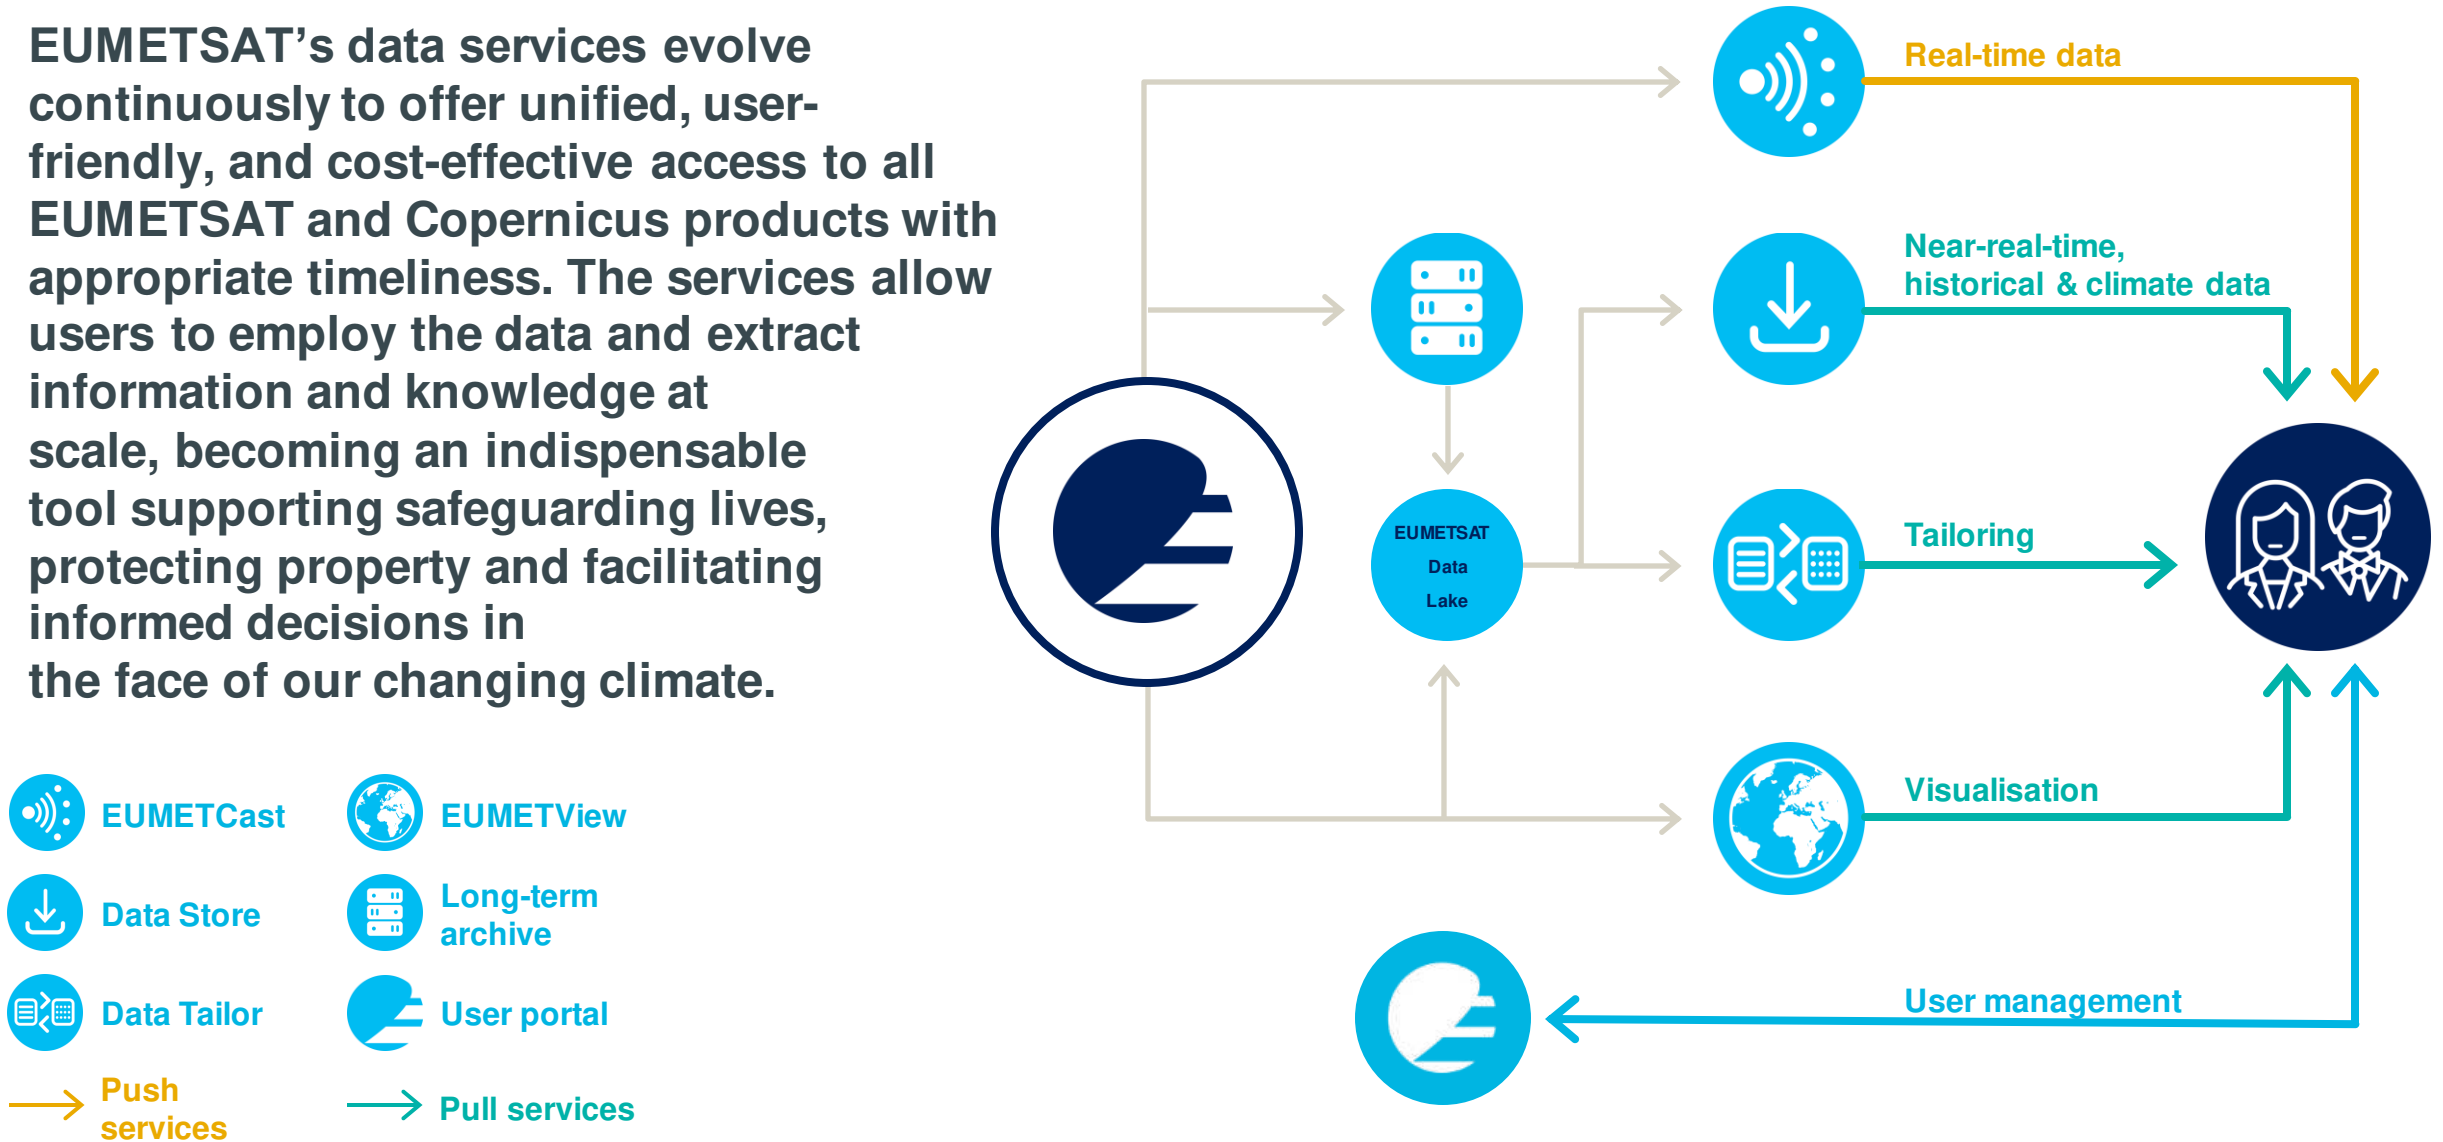

Meteosat Third Generation sounding  
mission, launched on 1 July 2025

## METOP-SGA1 (98.7° incl.)

Low Earth, sun-synchronous orbit

EUMETSAT Polar System Second  
Generation (EPS-SG) / Joint Polar System

EUMETSAT's data services evolve continuously to offer unified, user-friendly, and cost-effective access to all EUMETSAT and Copernicus products with appropriate timeliness. The services allow users to employ the data and extract information and knowledge at scale, becoming an indispensable tool supporting safeguarding lives, protecting property and facilitating informed decisions in the face of our changing climate.

Welcome to the EUMETSAT User Portal

## New European Weather Cloud Community Hub launched

A new European Weather Cloud (EWC) Community Hub has been launched by EUMETSAT and ECMWF. The hub is a centralised platform where EWC users can discover, evaluate, select, and deploy items and services tailored to the European Meteorological Community and running in the EWC.

The European Weather Cloud (EWC) was set up by EUMETSAT and ECMWF as a cloud-based collaboration platform for meteorological application development and operations in Europe. The European Weather Cloud is dedicated to support the National Hydro-meteorological Services of the Member States of both ECMWF and EUMETSAT in fulfilling their official duties and related R&D activities.

### Active Fire Monitoring (CAP) - MTG - 0 degree

[GEO](#)

The Active Fire Monitoring product indicates the presence of fire within a pixel. The key input to the algorithm is the FCI channel IR-3.8, which is very sensitive to hot spots caused by fire.

### All Sky Radiance (BUFR) - MTG - 0 degree

[GEO](#)

The All-Sky Radiance (ASR) product is a segmented product that provides FCI Level 1C data statistics within processing segments referred to as Field-of-Regard (FoR). The statistics are computed on the L1C radiances (for all FCI channels), brightness temperatures (for the eight IR channels) and reflectances (for the eight visible and near-infrared channels) and include the mean value, standard deviation, minimum and maximum value...

- Think in microservices – build a portfolio with loose coupling, not a monolith
- Build for cloud first
  - Automated deployment pipelines
  - Automated testing
  - Reproducible deployments
  - APIs first
- Keep the playing field level for all users so that we can embrace a diverse community rather than try to bring them to our walled garden

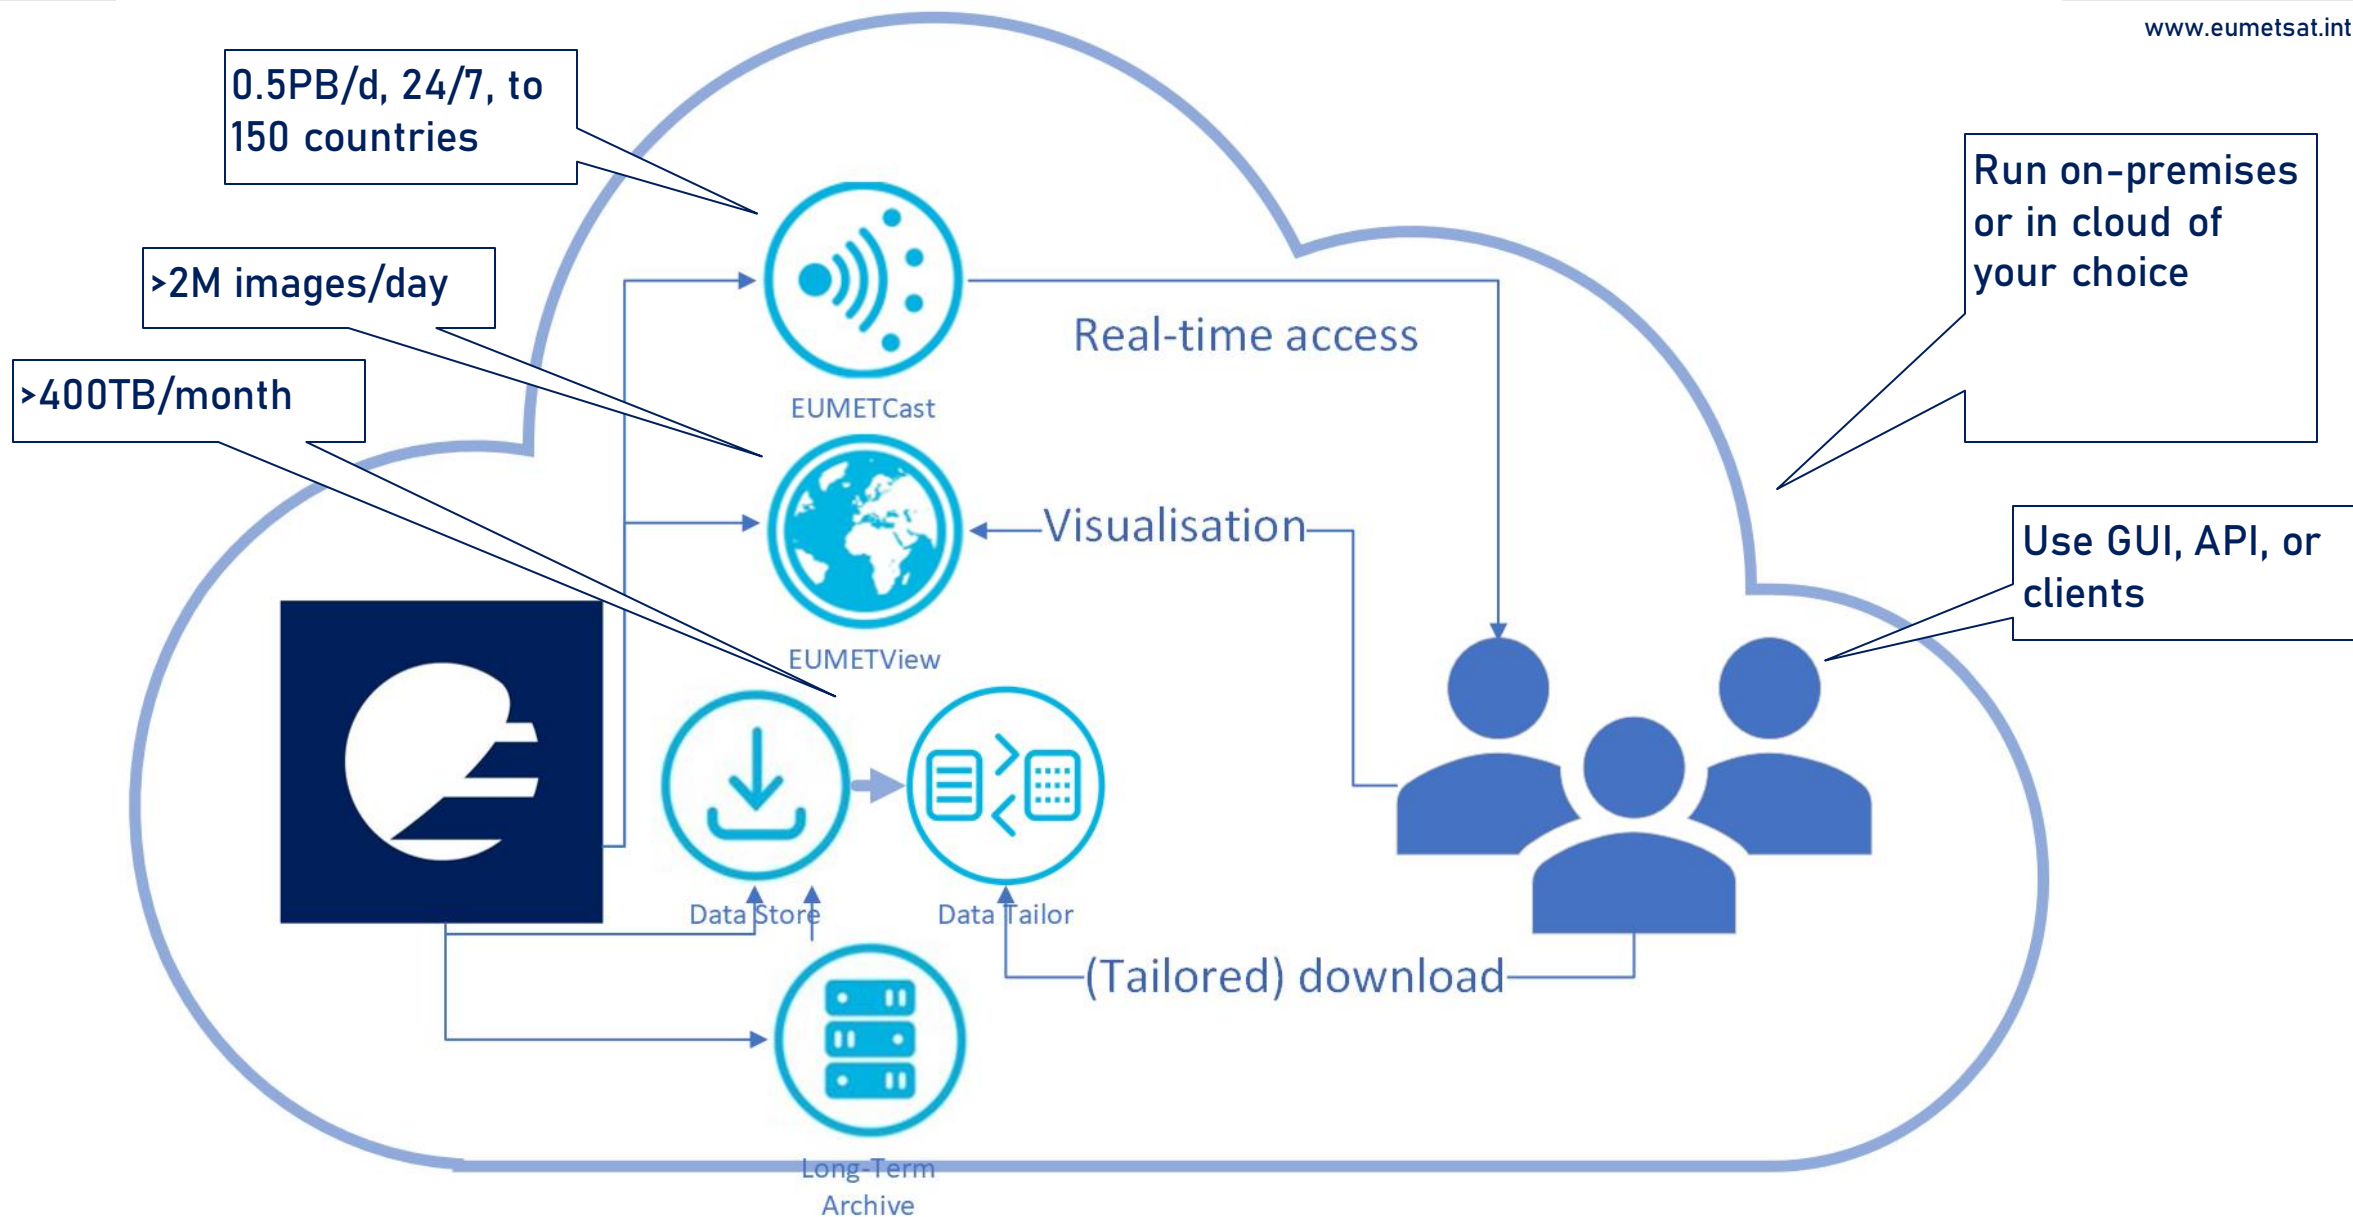

# So what does the portfolio actually DO?

www.eumetsat.int

# Evolution of WMO data exchange

www.eumetsat.int

**1963** World Weather Watch

**1970s** Global Telecommunication System (GTS)

**2007** WMO Information System (WIS)

**2019** WMO Reform (Earth System Approach)

**2021** WMO Unified Data Policy (Core, Recommended)

## **Resolution 34 (EC-76)**

Implementation plan update of the WMO  
Information System 2.0

[[WMO-No. 1314](#), pg. 1147]

## **Resolution 25 (Cg-19)**

Technical Regulations of the WMO Information  
System 2.0

[[WMO-No. 1326](#), pg. 209]

## WIS 2.0

*... collaborative system of systems using Web-architecture and open standards to provide simple, timely and seamless sharing of trusted data and information ...*

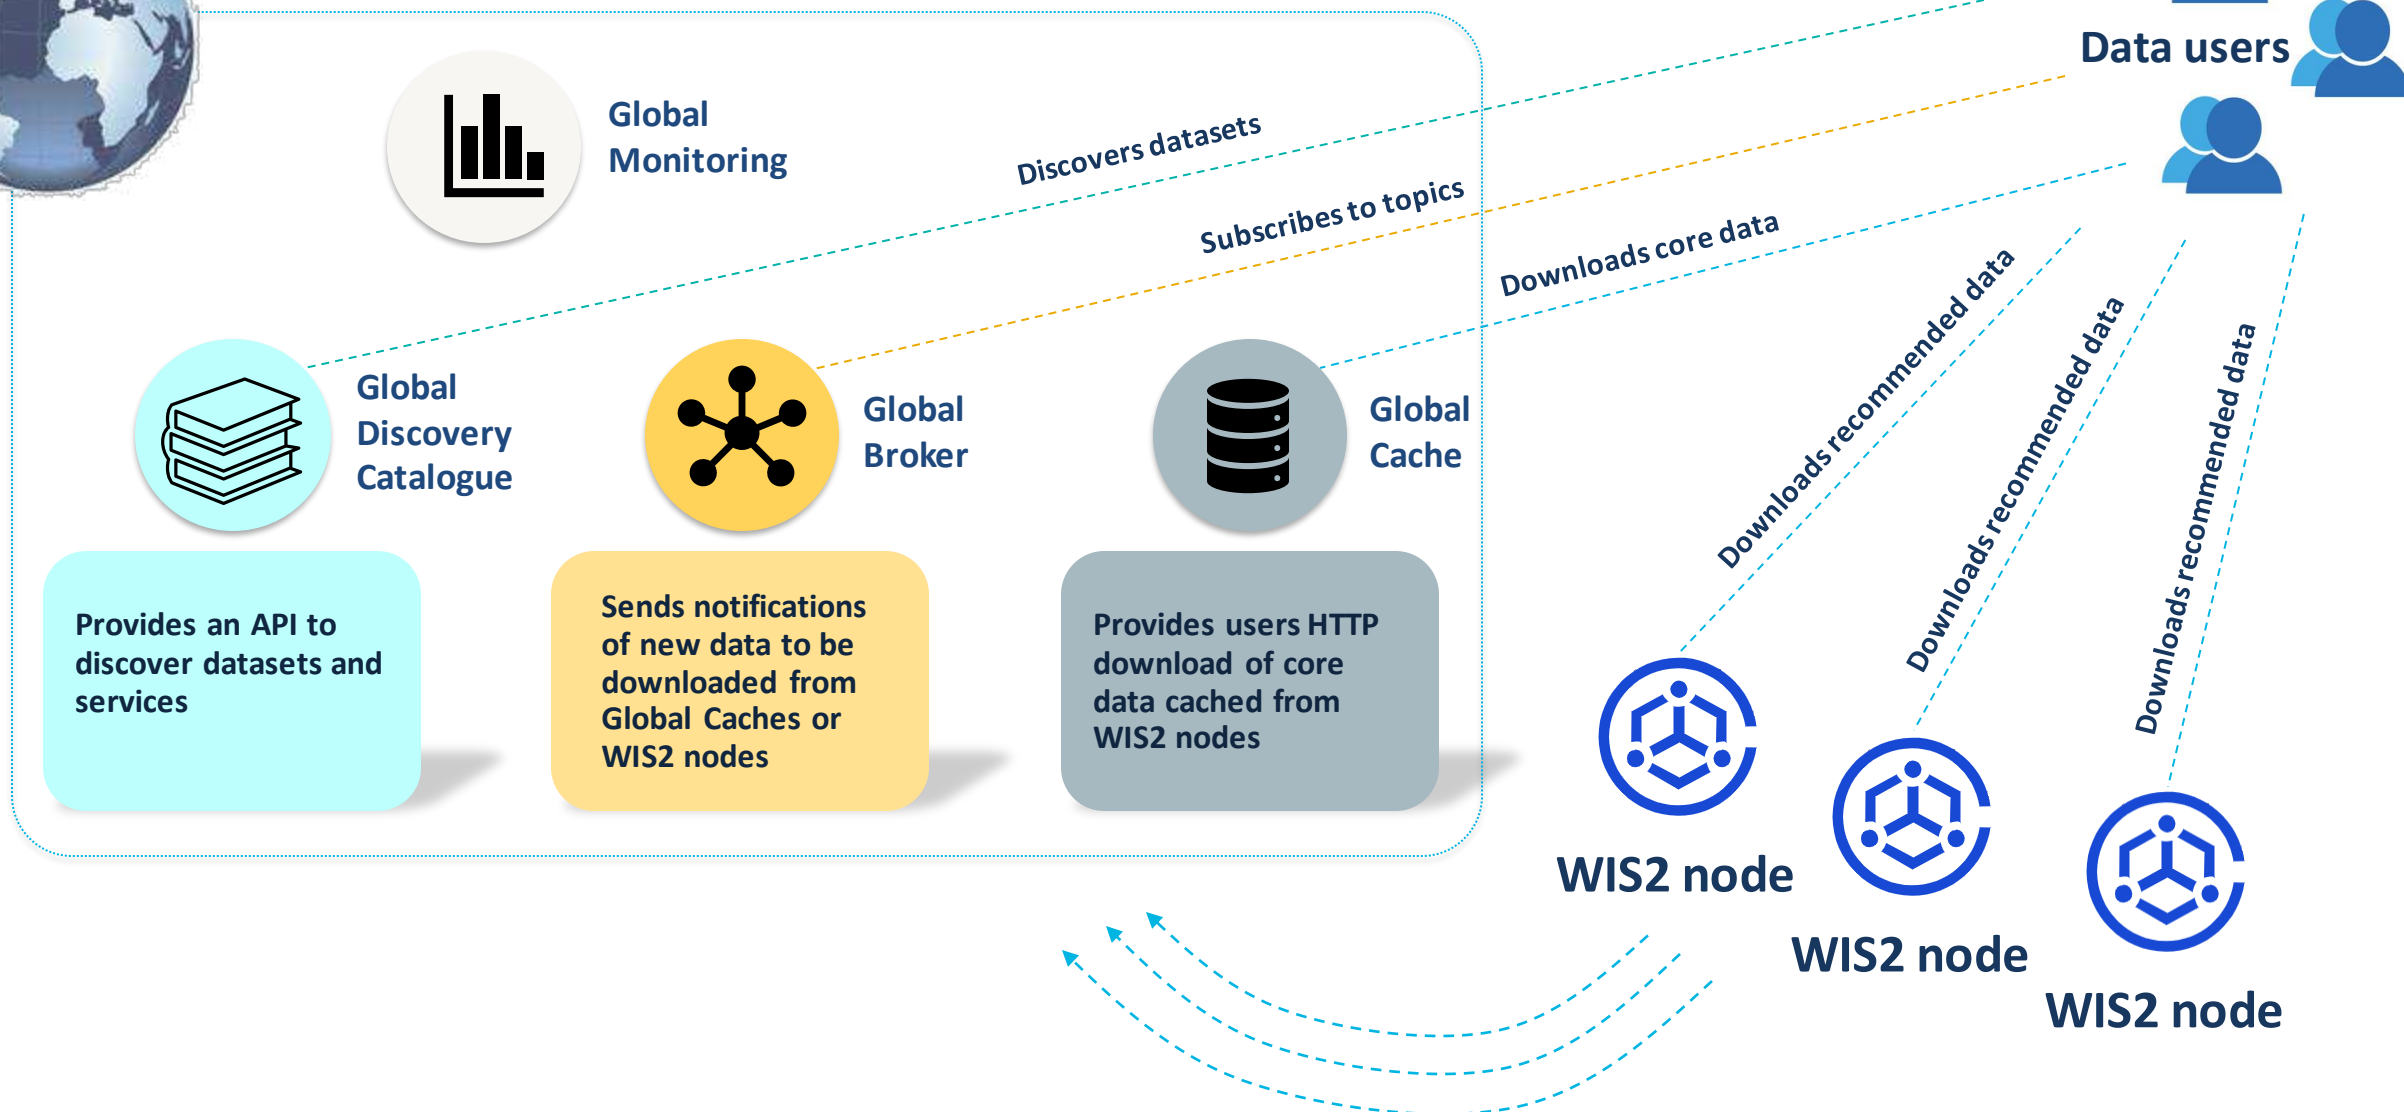

- Open Standards (OGC, W3C, IETF, ...)
- Free and Open Source tooling
- Data sharing through Web and real-time notifications with publication/subscription (pub/sub) protocols
- Cloud ready (turn-key solutions)
- Web services and APIs (Application Programming Interface)

# WIS2 Components: Global Services

imetsat.int

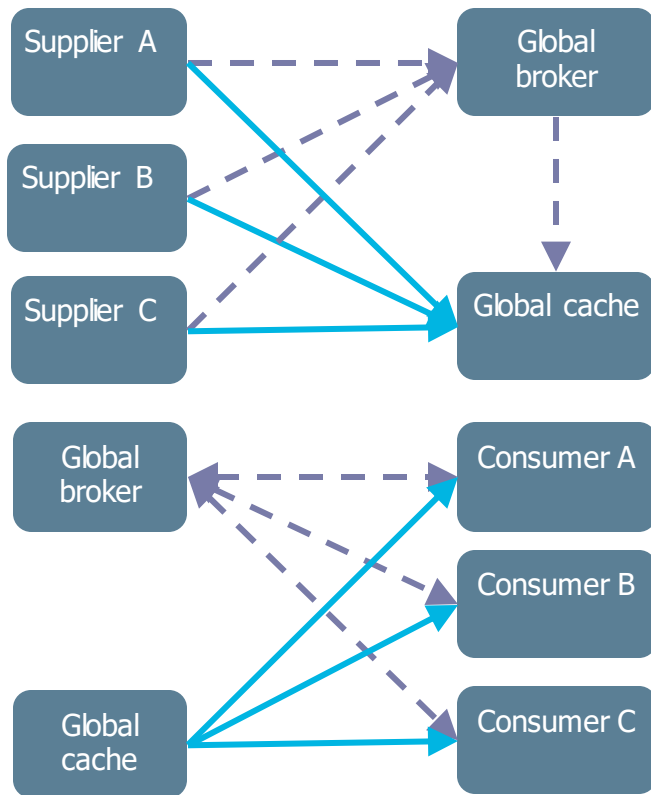

## Global Services

**Simple architecture:** Illustrated here for core (essential) data, much of which will be available from the global caches. Other core data will be provided directly by the supplier (see next slide)

## Suppliers' perspective:

- Suppliers inform global broker of data availability
- Global broker informs global cache of data availability
- Global cache collects and caches the data from the suppliers

## Consumers' perspective:

- Consumers request notification of data availability from global broker
- Global broker informs consumers of data availability
- Consumers collect data from the global cache

# Getting more data to those who need it, faster

www.eumetsat.int

Our data services provide quick and easy access to all of EUMETSAT's satellite data. And now, users can work directly with this data through new cloud platforms.

## PARTNER DATA SERVICES

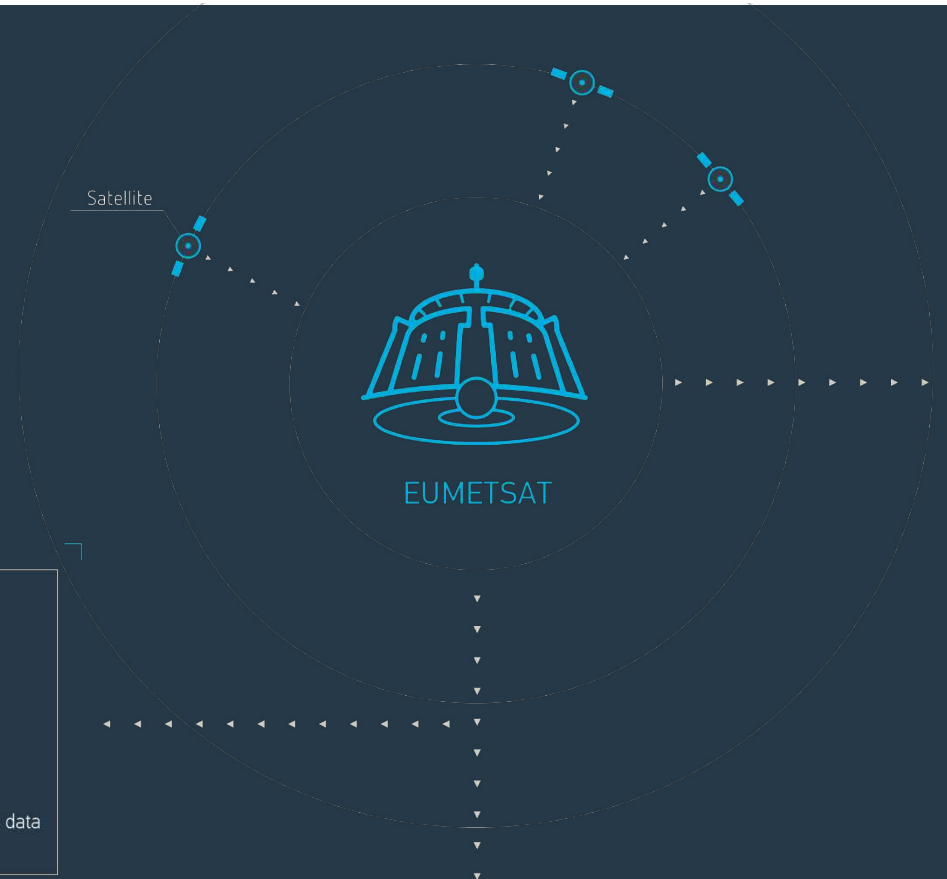

### European Weather Cloud With the ECMWF

Providing satellite data and cloud-based processing for national weather services in their member states.

### WEKEO With the ECMWF, Mercator Ocean International and EEA

Providing online access to Copernicus data and cloud-based processing.

## EUMETSAT Data Centre

Preserving an archive of more than four decades of satellite data for climate monitoring.

In 2025, there will be roughly 3,500% more data available to users than 10 years ago.

## EUMETSAT DATA SERVICES

### Data Store

The front-end access point for satellite data.

### Data Tailor

A service where users can process and transform satellite data.

### EUMETView

A service for users to visualise satellite data from the data store with the option to download.

### EUMETCast

Providing satellite data directly via satellite and terrestrial networks.
