ESA UNCLASSIFIED – For ESA Official Use Only

Aerosol and aerosol-cloud Interaction from Remote SENSing Enhancement

Objective: is to enhance the understanding of aerosol and aerosol-cloud interactions.

- . **Part of** [Atmosphere Science Cluster](#) of ESA's EO Science for Society program an element of the [ESA FutureEO programme](#), which aims at boosting Europe's excellence in EO science and its applications.

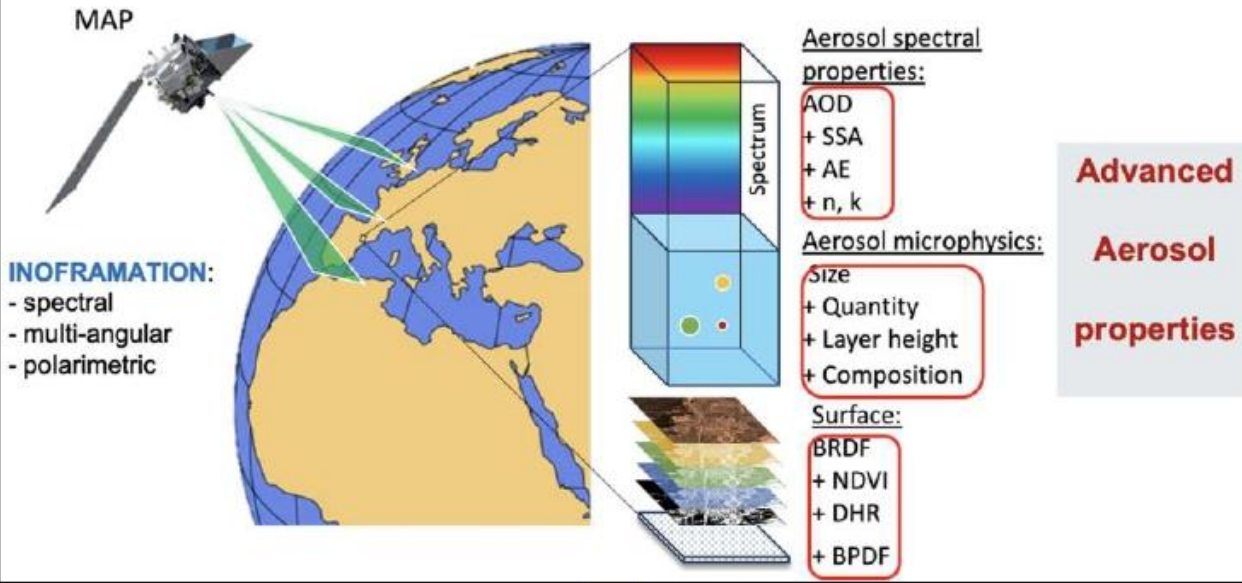

Web site: <https://www.grasp-earth.com/portfolio/airsense/>

ESA project officer: **Thorsten Fehr**

Product **MATURITY** of *advanced* satellite instruments

Multi-Angular Polarimetry

columnar aerosol properties

more detailed and more accurate than from Single/Bi-viewing Imagers

Space Lidar

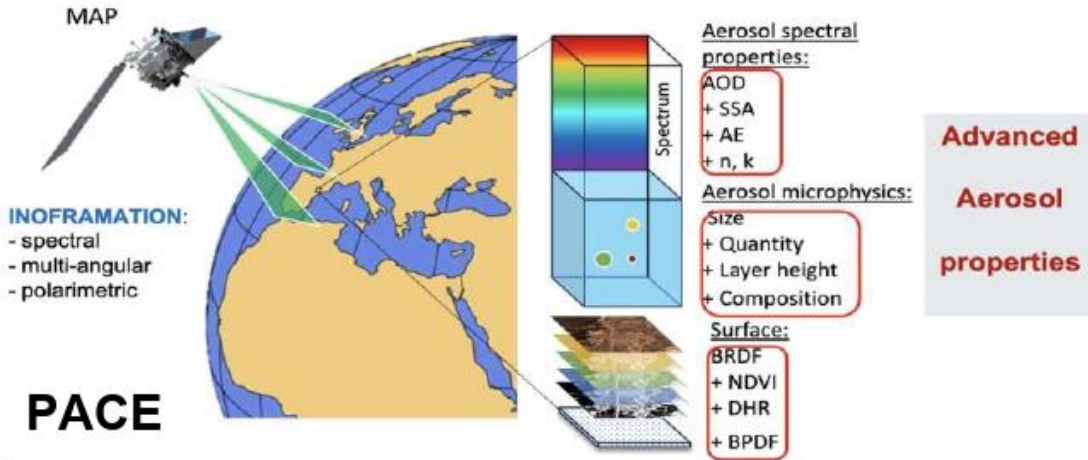

vertical aerosol properties

more detailed and more accurate than from present sensors

POLDER product analysis:

Multi-Angular Polarimetry

1. The baseline **AOD, AE, fine /coarse AOD** (ocean), **from MAP** overall have higher, accuracy than from «MODIS»;

2. Detailed properties - **AE, fine /coarse AOD (land), SSA, AAOD** are available from **MAP**;

AOD(land), AE, fine /coarse AOD (land), SSA, AAOD from MAP are of unprecedented accuracy

Space Lidar Product **MATURITY**

- vertical
- type

TASK 2300.1:
Retrieve novel POLIPHON conversion parameters for the application at 355 nm from global AERONET datasets.

Testbed Tajikistan: 18-month concurrent measurements at **355** and **532** nm, highly quality controlled and cloud screened (Hofer et al., ACP, 2017; 2020a,b).

TASK 2300.2:
Determine type-dependent depolarization and lidar ratios for profile partitioning and backscatter-to-extinction conversion at 355 nm from extensive ACTRIS/PollyNET datasets.

TEAMS involved:

TROPOS

Leibniz Institute for Tropospheric Research

Ulla Wandinger, Holger Baars, etc.

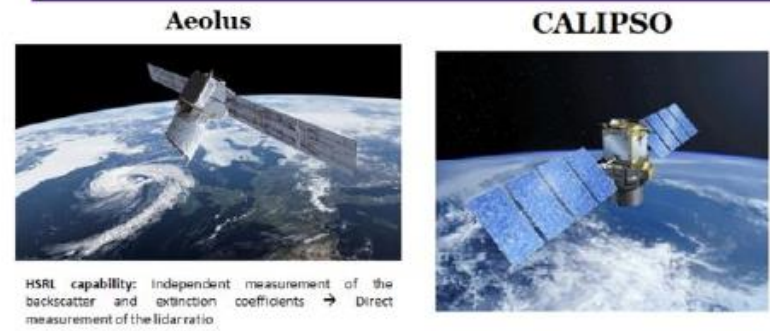

Koninklijk Nederlands Meteorologisch Instituut
Ministerie van Infrastructuur en Milieu

Gerd-Jan van Zadelhoff, Thanos Tsikerdekis, Dave Donovan, etc.

ΕΘΝΙΚΟΝ ΑΣΤΕΡΟΚΟΜΕΙΟΝ ΑΘΗΝΩΝ
NATIONAL OBSERVATORY OF ATHENS

Vassilis Amiridis, Alexandra Tsekeri, Eleni Drakaki, etc.

TASK2300.4: Extend the products in time with additional products from CALIPSO, investigate the possibility to use Aeolus products as well.

Retrieval developments

KEY ELEMENTS:

GRASP engine

Product **MATURITY** of *advanced* satellite instruments:

- Multi-angular polarimeters (MAP)''

PACE:
HAPR-2
SPEX

3MI
MAP/CO2M

- Space Lidars:

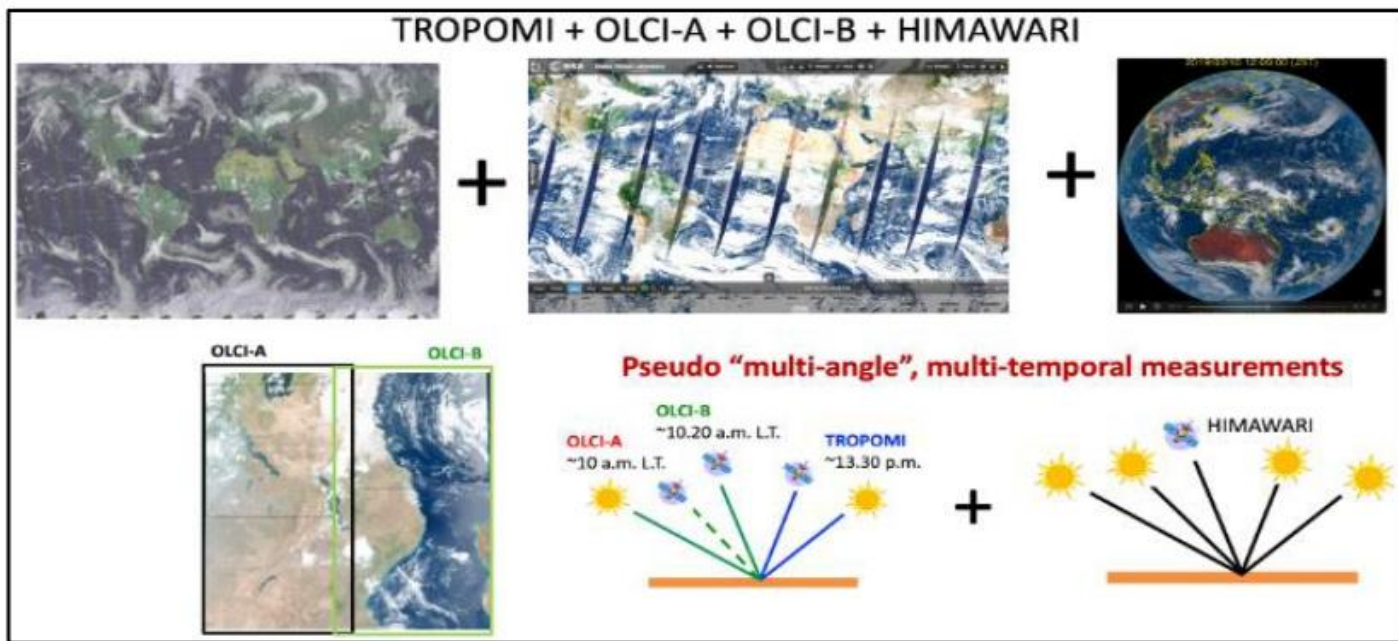

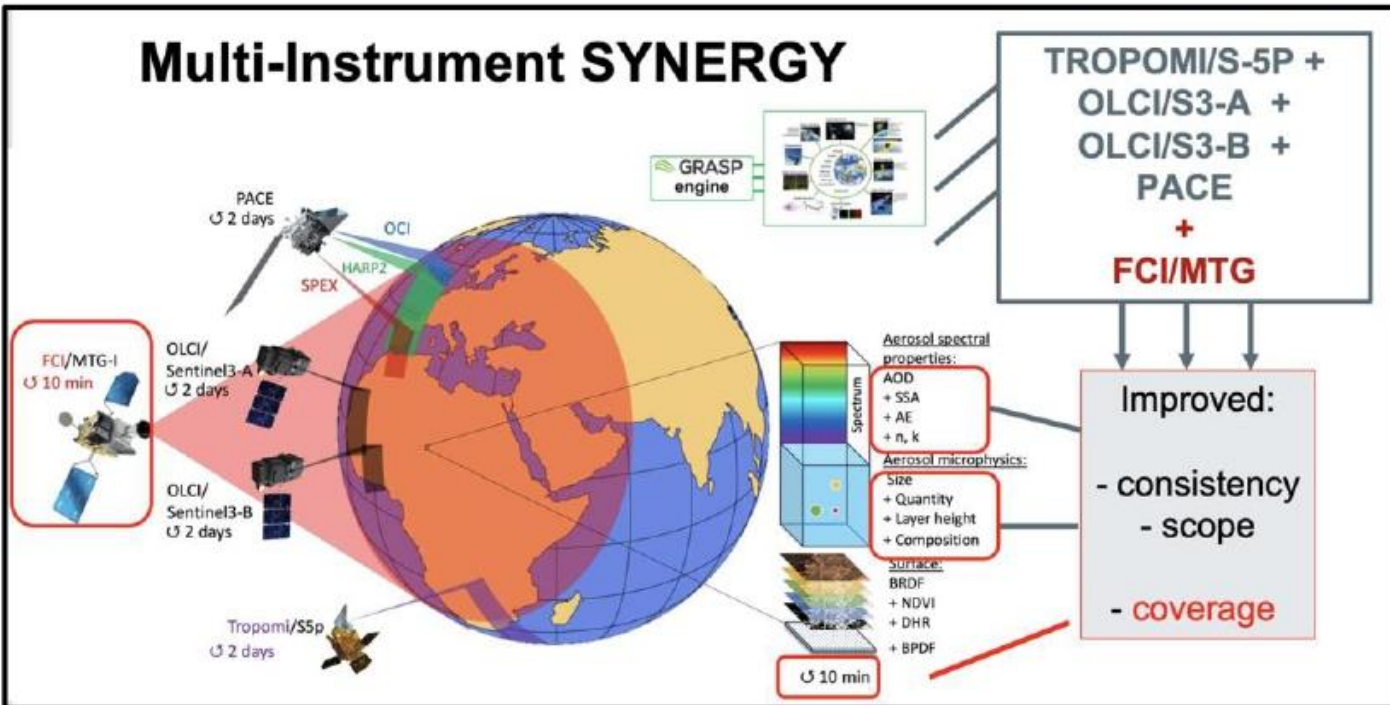

CALIPSO
AEOLUS
EarthCARE

Multi-Instrument SYNERGY of *available* satellites with different complementarities:

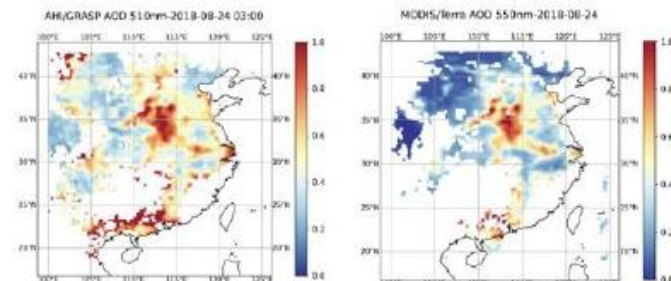

- improved global coverage;
- complementary content;
- passive GEO + LEO;
- passive conventional + advanced;
- passive + active

Validation of AIRSENSE products:

AIRSENSE products (WP2100, WP2200, WP2300) will be evaluated using suborbital observations from lidars, radars, radiometers and disdrometers from the **PollyNET & ACTRIS** aerosol and cloud remote sensing sites in:

- (i) **Cabo Verde** (atmospheric observatory operated by TROPOS),
- (ii) **Antikythera, Greece** (PANGAEA observatory operated by NOA),
- (iii) **Limassol, Cyprus** (operated by TROPOS),
- (iv) **Warsaw, Poland** (operated by UW),
- (v) **Melpitz, Germany** (supersite operated by TROPOS), and
- (vi) **Dushanbe, Tajikistan** (station operated by TROPOS).

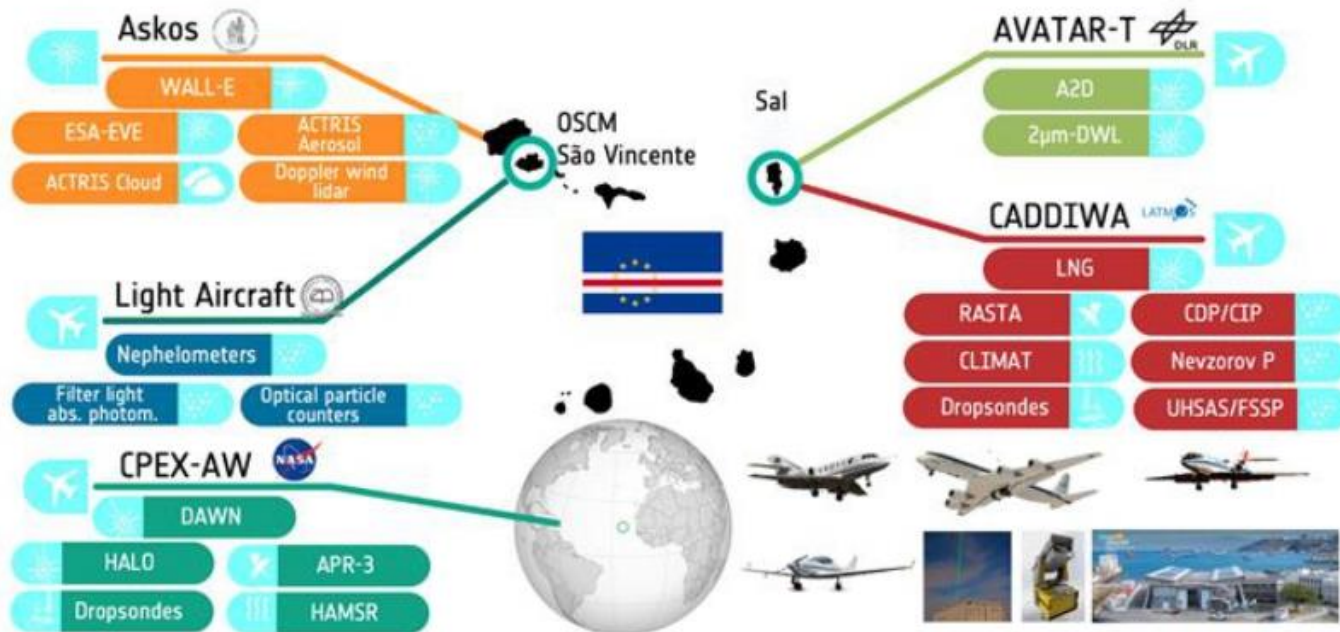

- Past datasets during **Aeolus** and **CALIPSO** overpasses will be used along with new datasets to perform thorough validation studies for the passive and active remote sensing retrievals and long-term datasets of AIRSENSE.
- Datasets from the operation of the **eVe (CV)** and **EMORAL** mobile lidar systems of **ESA**.

Fully operated stations during **EarthCARE** overpasses

Aeolus Cal/Val Tropical Atlantic Campaign (JATAC) and collaborated NASA CPEX campaigns (2021–2022)

ASKOS Science Objectives:

- **Aeolus Validation using** an unprecedented amount of quality assured datasets
- **Support to future ESA missions: EarthCARE**
- Science (e.g., dust effect on cloud formation, radiation, deposition)

In situ measurements
onboard UAVs

OPCs measurements (0.1 – 80 µm)
GPAC Impactor sampling (up to 100 µm)
Collected samples for chemical analysis

ACTRIS Aerosol & Cloud remote sensing facilities

eVe lidar

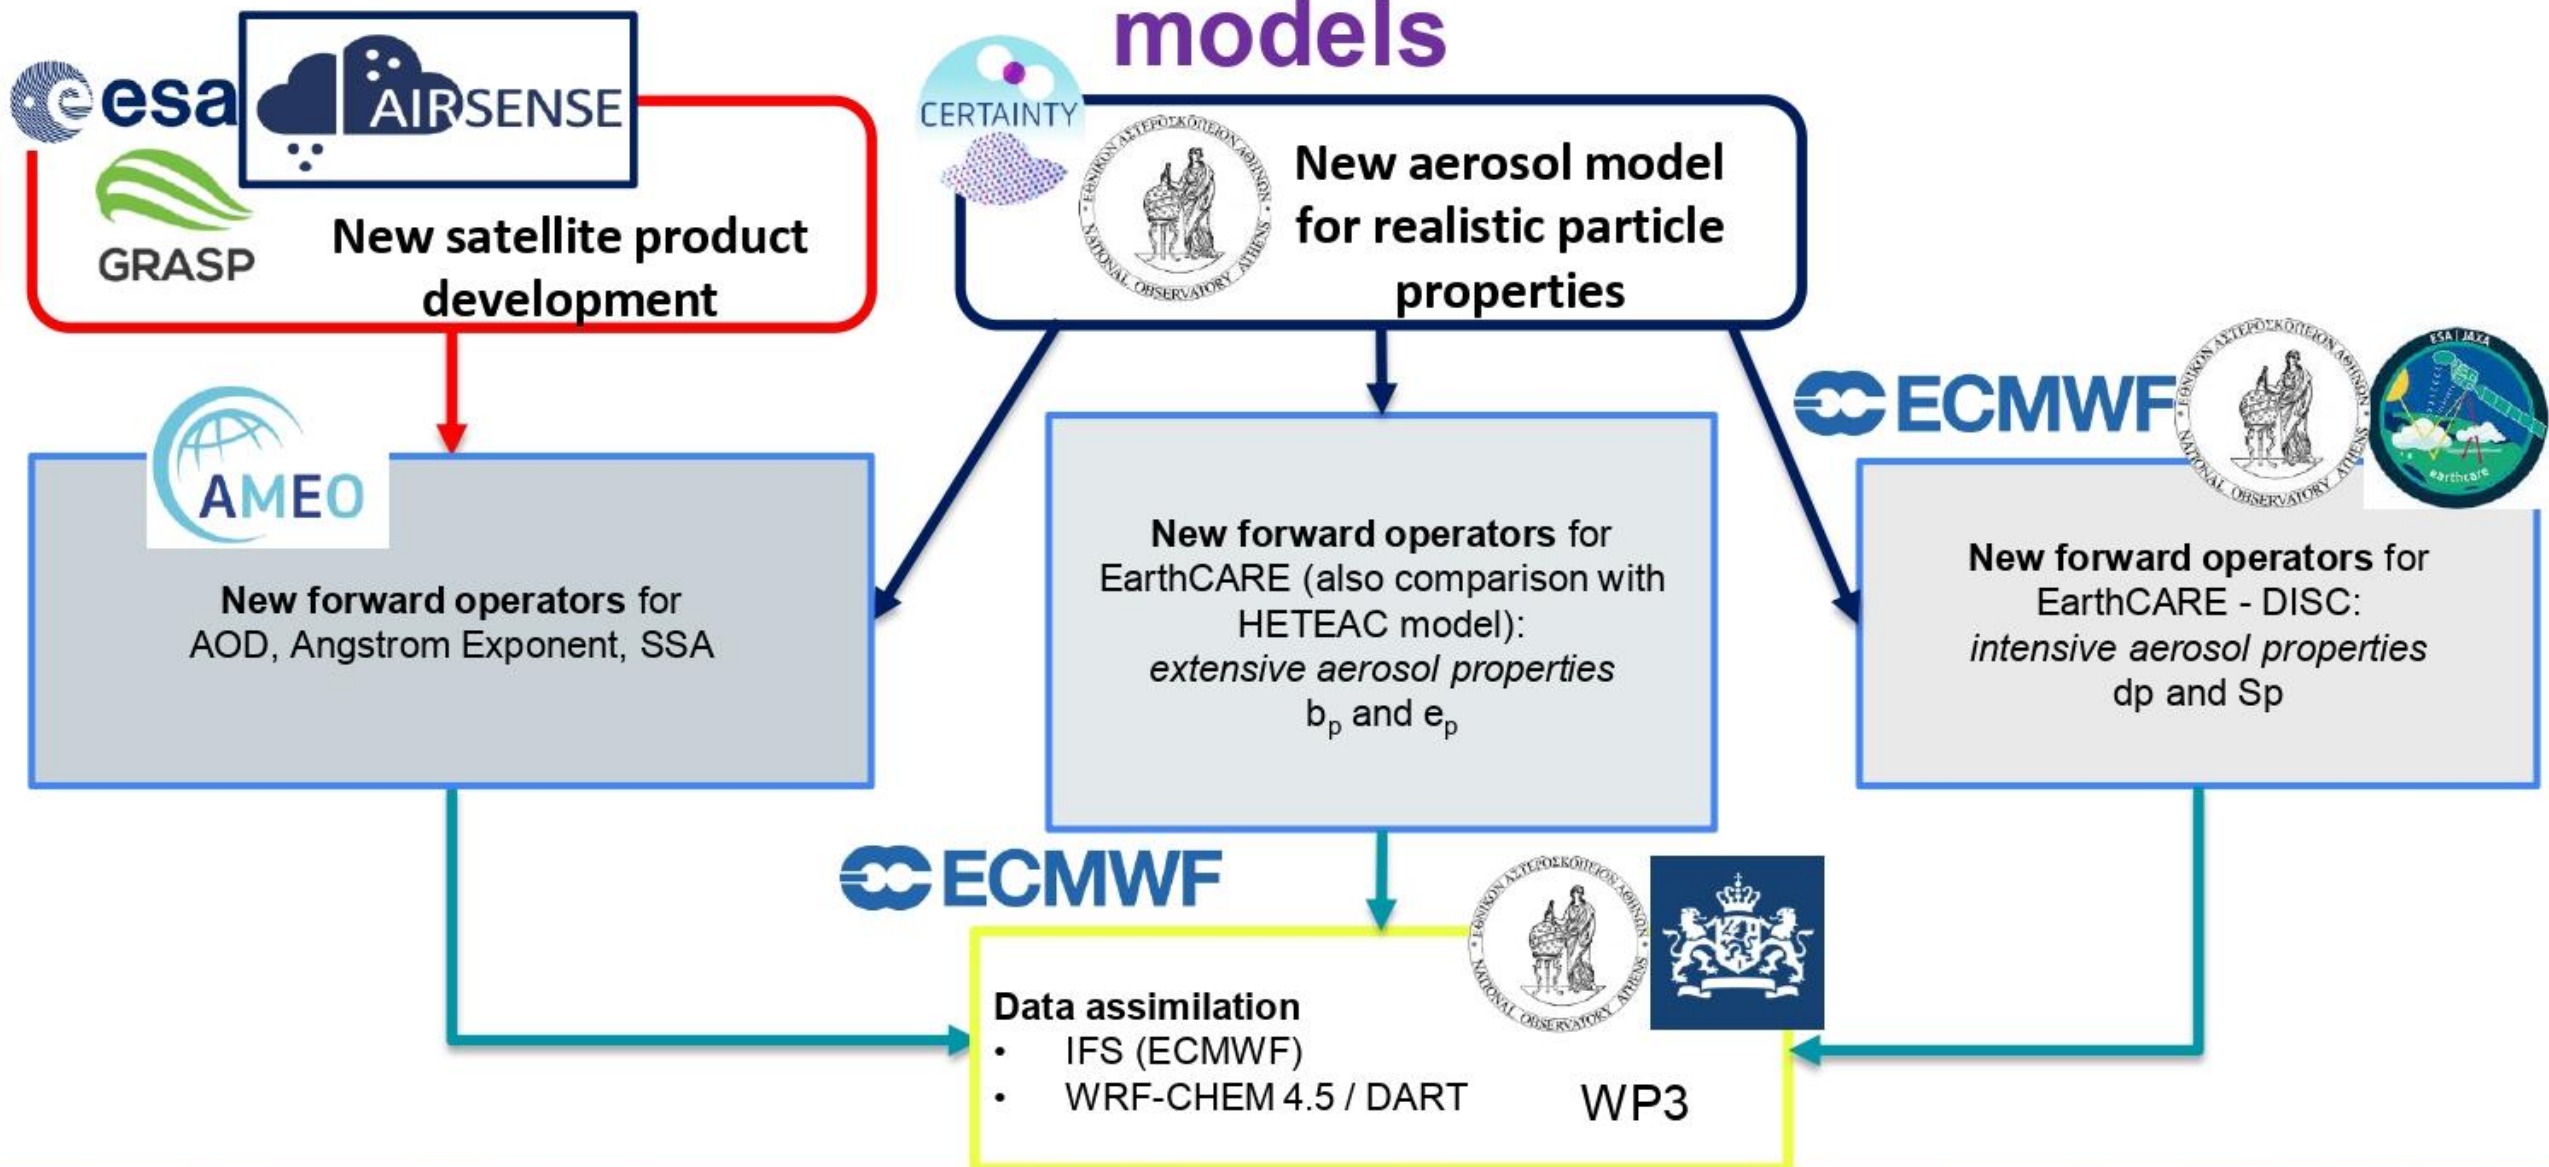

Radiation

(ii) EarthCARE Cal/Val experiments in the framework of the German Initiative for the Validation of EarthCARE (GIVE) including Tropical Atlantic in 2024

Assimilation of satellite products in numerical models

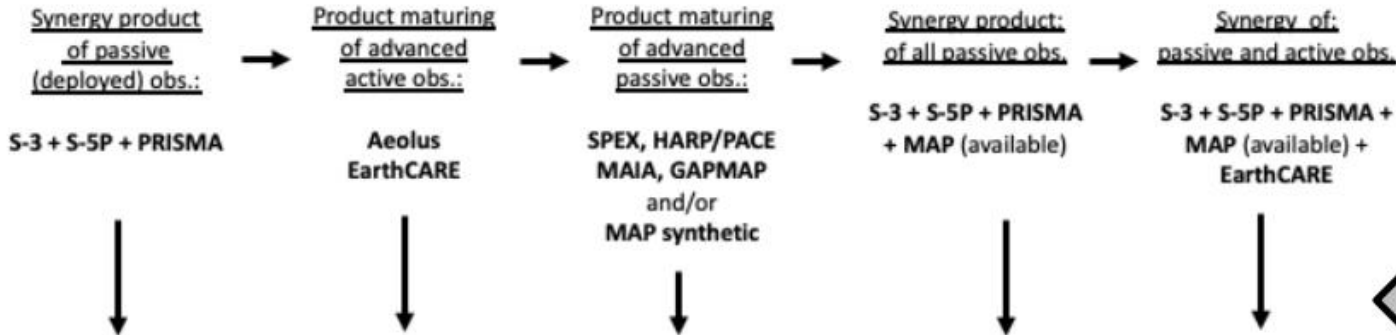

Horizon Europe Coordinated activities

Aerosol and aerosol-cloud Interaction from Remote SENSing Enhancement

Novel products from multi-instrument synergy:

- Improved scope: aerosol and cloud type, vertical variability, stratospheric aerosol, etc.
- Improved coverage and time x space resolution.

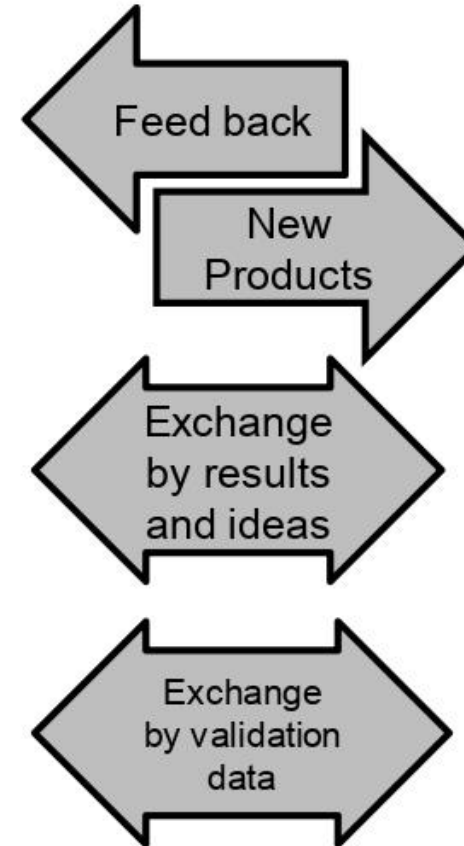

Science studies using observations:

- aerosol-cloud interactions, cloud formation, humidity growth, etc.

Science studies using models and data assimilation:

- atmospheric dynamics, water cycle

Ground based data (ACTRIS)
Field campaigns (ESA, NASA, Coordinated Activities)

Assimilation

CERTAINTY CleanCloud ACTRIS

To formulate joint scientific studies on radiative forcing?

PANORAMA

HORIZON-CL6-2024-GOVERNANCE-01-6

Multi - sensor synergies for improved weather - climate - environmental products and applications, to advance European services supporting green transition

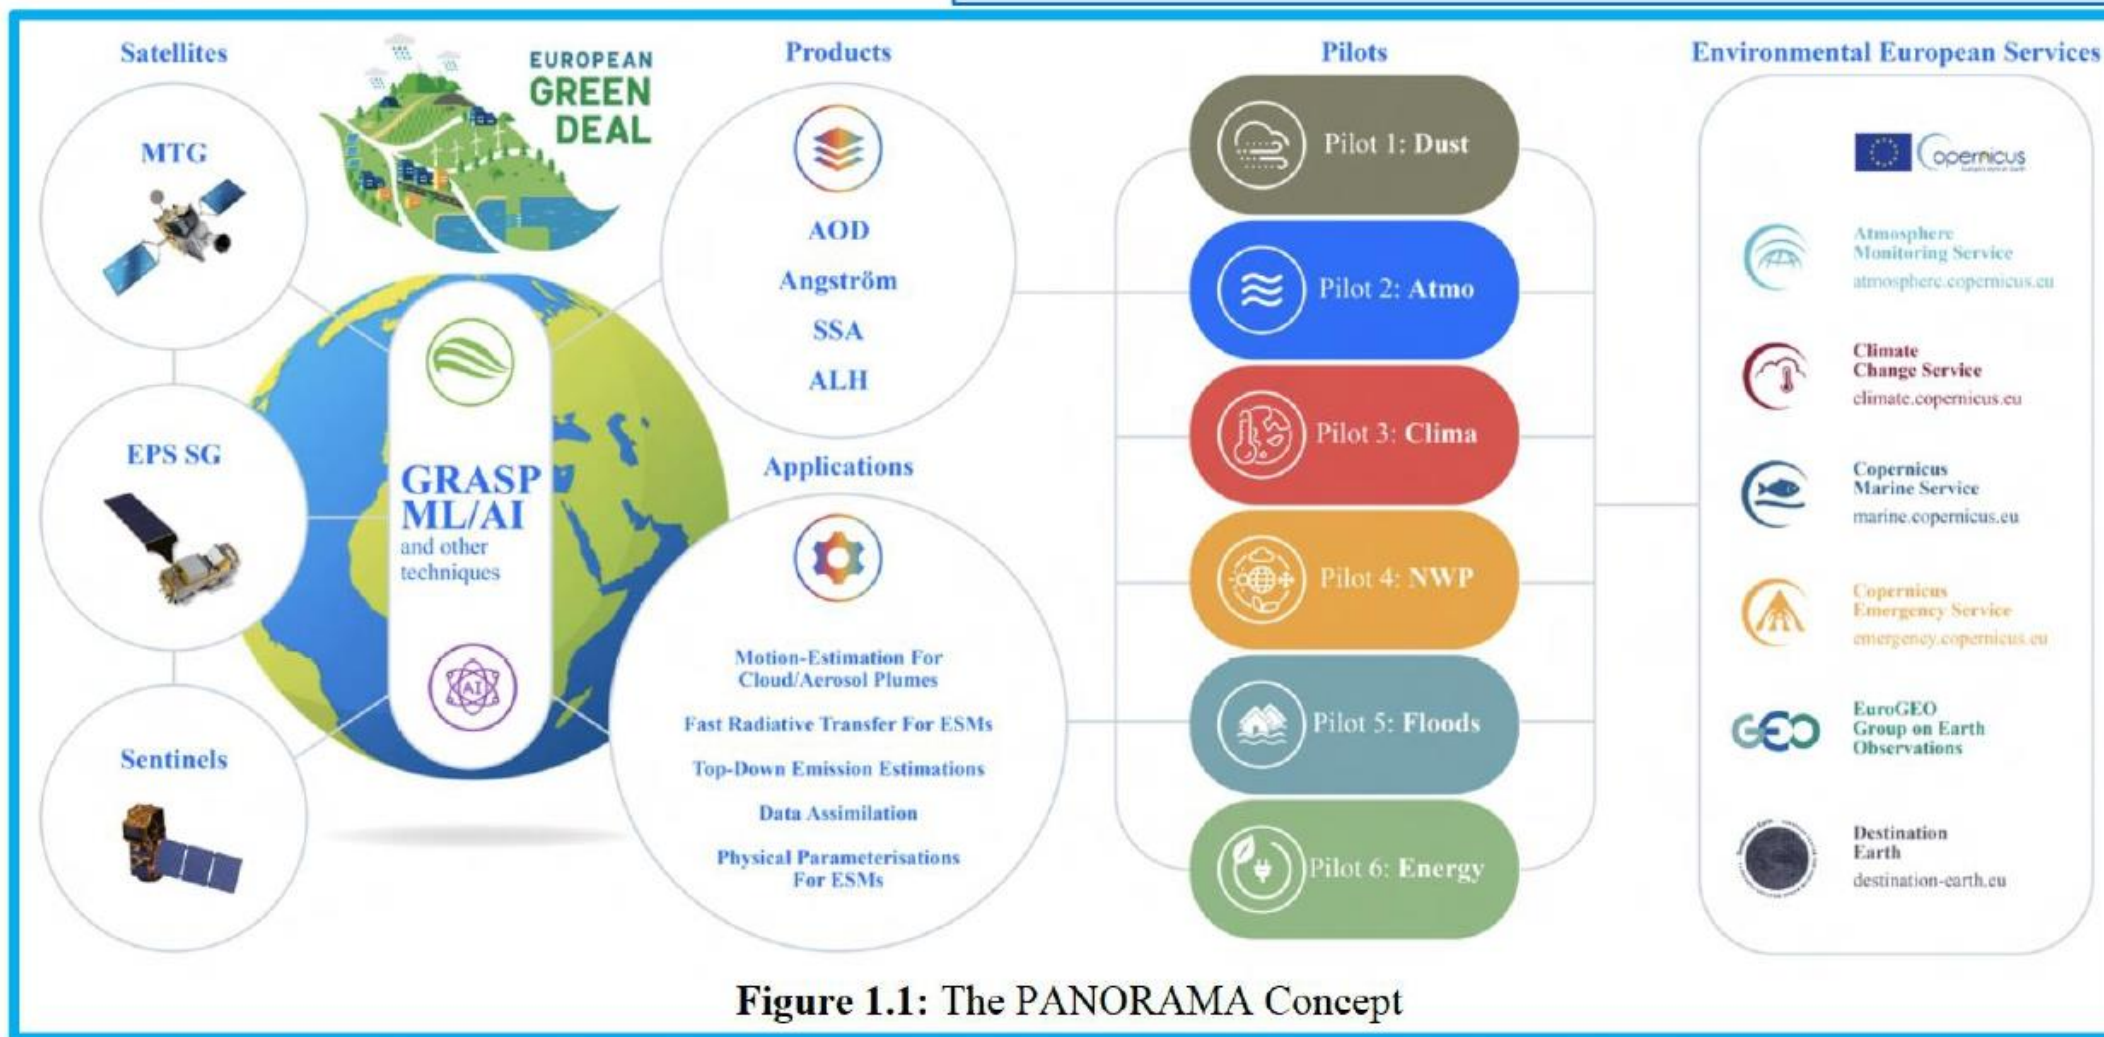

Figure 1.1: The PANORAMA Concept

Thank you!

SYREMIS/GRASP synergetic retrieval in AIRSENSE project

| Satellites | Description |
|---------------------------------------|--|
| OLCI/Sentinel-3A and OLCI/Sentinel-3B | <ul style="list-style-type: none"> - Polar-orbiting, global coverage - One observation per pixel - Moderate spatial resolution - Radiance measurements in VIS and NIR spectral range |
| TROPOMI/Sentinel-5p | <ul style="list-style-type: none"> - Polar-orbiting, global coverage, from 1 to a few observations per day - Hyperspectral measurements in UV, VIS, NIR, SWIR spectral range |

| SYREMIS Synergy | i. Multi-spectral | | | ii. Multi-angular | iii. Multi-Polarization | iv. Multi - Temporal |
|-------------------------------|-------------------|-----------|------|-----------------------|-------------------------|----------------------|
| | UV | VIS - NIR | SWIR | | | |
| S3A/OLCI + S3B/OLCI + TROPOMI | + | + | + | + Quasi multi-angular | - | + |

P1. Mineral dust deposition over the Atlantic

P2. Fire smoke and volcanic ash nowcasting in the Mediterranean region

P3. Aerosol information enhancements for climate data records in Europe

P4. Extreme weather forecasting for the severe storm Daniel

P5. Flood forecasting for the Karditsa case

P6. Solar energy forecasting in arid and dust outflow regions

Harmonisation of input datasets for first synergetic processing

Time frame: June –September: 2021, 2022

Collocated field campaigns:

1. ASKOS 2021,2022
2. A-LIFE dataset from the Eastern Mediterranean
3. Data from the eastern Mediterranean form the time frame of the ETNA eruptions used for Aeolus assimilation.

Preliminary Area:

Top-left corner: lat=55N, long 45W;

Bottom-right corner: lat=0, long 95E.
