What is European Ground Motion Service (EGMS)?

- EGMS is an essential element of the CLMS portfolio.
- It is produced using data collected by the **Sentinel-1** radar satellite mission.
- The EGMS products provide a **high-density, continental-scale** map of ground motion.
- Each measurement point has a value of ground motion velocity and a time series covering the last five years

Rovaniemi, Finland

PROGRAMME OF THE
EUROPEAN UNION

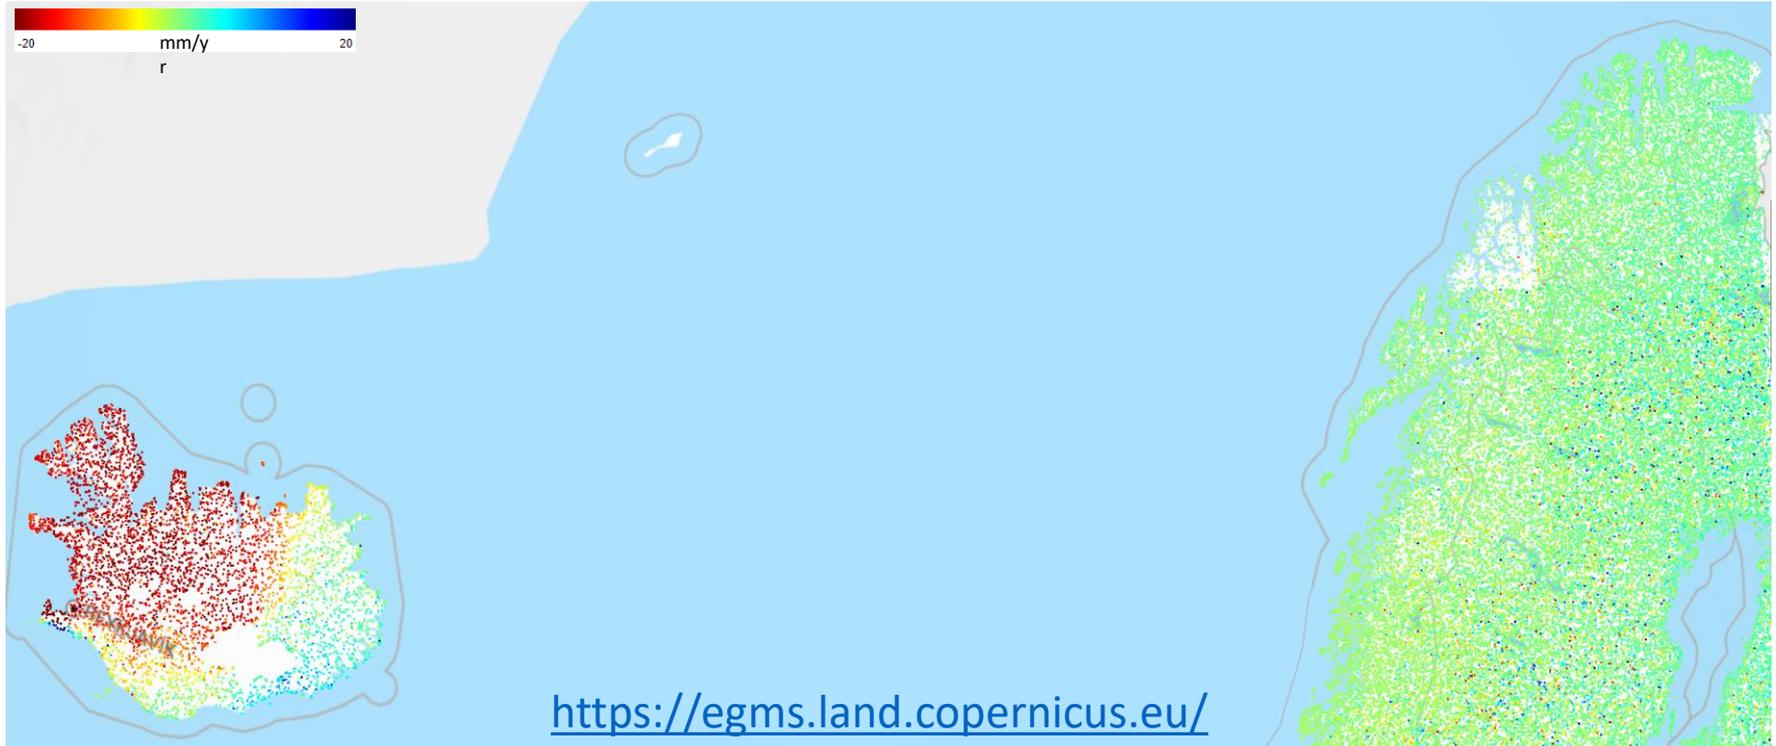

Implemented by

European
Environment
Agency

EGMS covers parts of the Arctic

PROGRAMME OF THE
EUROPEAN UNION

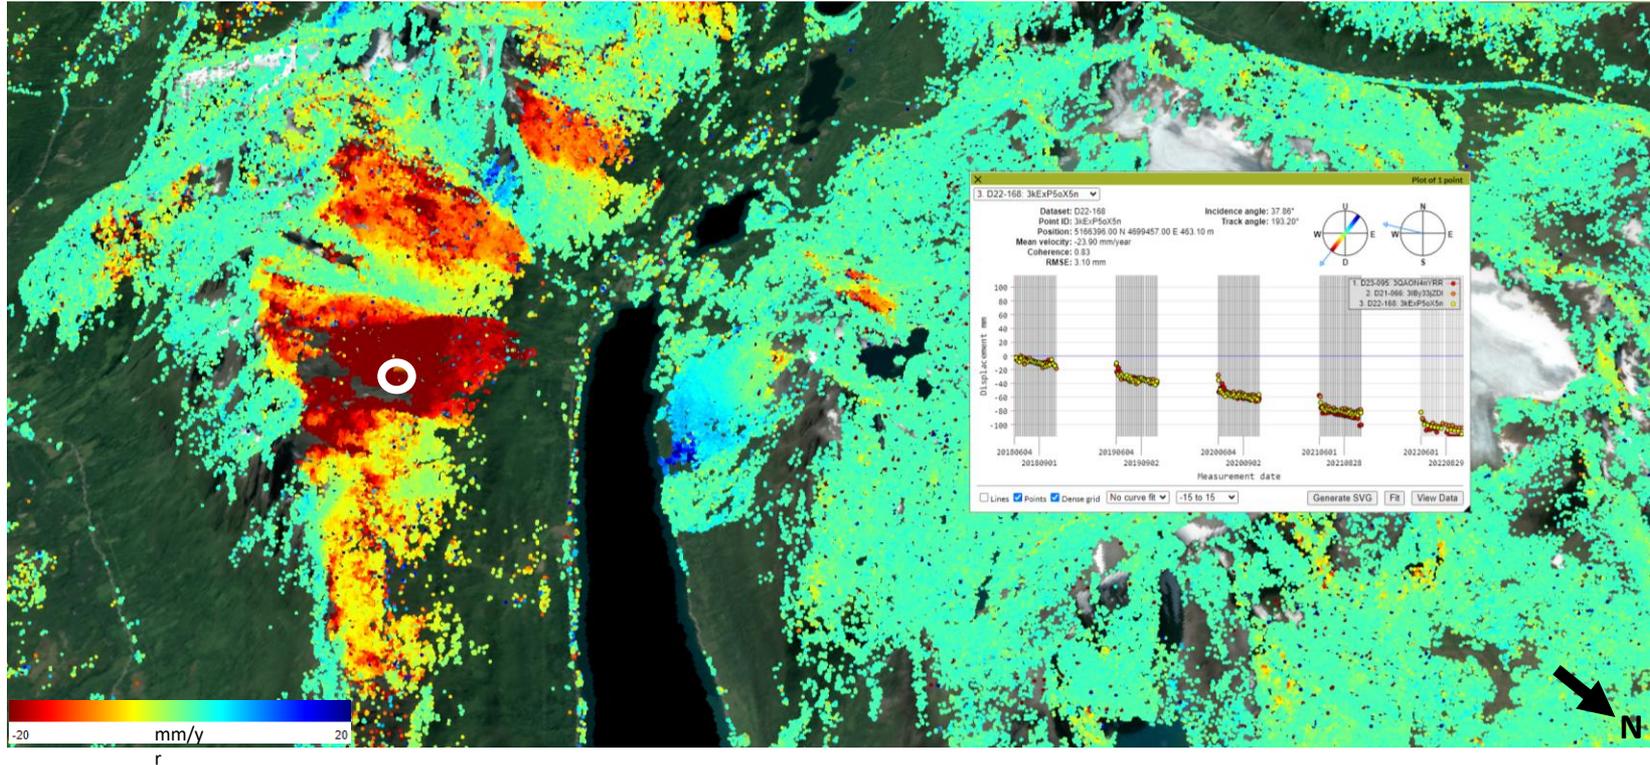

Implemented by

European
Environment
Agency

An example from Norway

Recommendation from the roadmap

“the extension of the EGMS (European Ground Motion Service) to the Arctic and Antarctica is strongly recommended”

1. Need to adopt a “hot-spot” approach
2. Ad-hoc technical specifications
3. Collect new user requirements

Land Monitoring

Thank you!
