Subject: Application for Membership of the ESPN Council

Dear Colleagues,

I am honored to submit my application for membership of the ESPN Council. I am a pediatric nephrologist based in Strasbourg, where I serve as co-head of a multidisciplinary pediatric department and pediatric dialysis unit. My primary research interests include dialysis, chronic kidney disease-mineral and bone disorder (CKD-MBD), and ANCA vasculitis.

At the national level, I am actively involved in the French Society of Pediatric Nephrology and aspire to join its board in the coming years. Additionally, I am engaged with the national pediatric university college and serve as a board member of the scientific committee of the French Vasculitis Study Group. I also coordinate the French National University Peritoneal Dialysis Postgraduate Course.

Internationally, I am a member of both the ESPN and IPNA societies. I am currently involved in the ESPN CKD-MBD and CKD-Dialysis Working Groups. Furthermore, I am a member of the EuroPD Future Leadership Project and participate in the European Pediatric Dialysis Working Group.

I am part of a research team at the Institute of Chemistry and Processes for Energy, Environment and Health (ICPEES) in Strasbourg, where we are developing innovative methodologies for synthesizing materials. Our current focus is on creating phosphate-chelating nanoparticles for clinical peritoneal dialysis applications.

Joining the ESPN Council would be a great honour and a unique opportunity to collaborate closely with esteemed colleagues from across Europe. I would bring my extensive experience in pediatric nephrology in France and am eager to contribute to the development of European projects as part of a dynamic team. Additionally, I aim to provide a clinical and translational research perspective.

I hope that these points will support my candidacy in the upcoming vote and I would be pleased to provide any additional information that you may require.

Thank you for your consideration.

Yours faithfully,
Ariane Zaloszcyc, MD, PhD
