## Medimaps TBS iNsight™

Using Trabecular Bone Score (TBS) to enhance the capabilities of your DXA service allows you to identify up to 30% more patients at high fracture risk.

Gain a fuller picture of bone health, helping fine-tune treatment options and response with greater confidence.

Easily added to existing DXA systems with no additional scan time, radiation burden or disruption to existing workflow.

Automatic, easy-to-read reports with editable conclusions aligned to current guidelines, saving clinician time and supporting clear communication with patients and referrers.

Used for over 2,000,000 DXA procedures per annum and supported by robust evidence

### All-In-One Report

- TBS adjusted FRAX, TBS adjusted BMD T-Score
- Automatic & easy to interpret report with editable conclusions option
- Option to print and/or send to PACS (DICOM SR)
