SAP DSC Portfolio | Connected Solutions for Resilient Business

SAP Digital Manufacturing

PRODUCTIVITY AT SCALE

Operational Efficiency and Resiliency

with seamless integration into the entire supply chain

Shop Floor Automation

through machine integration & shop floor process modeling

Connected Frontline Worker

with intuitive worker guidance and artificial intelligence

Process Efficiency & Quality Control

supported by artificial intelligence, QM integration and issue resolution

Analytics

for real-time insights and sustainability

Traceability & Compliance

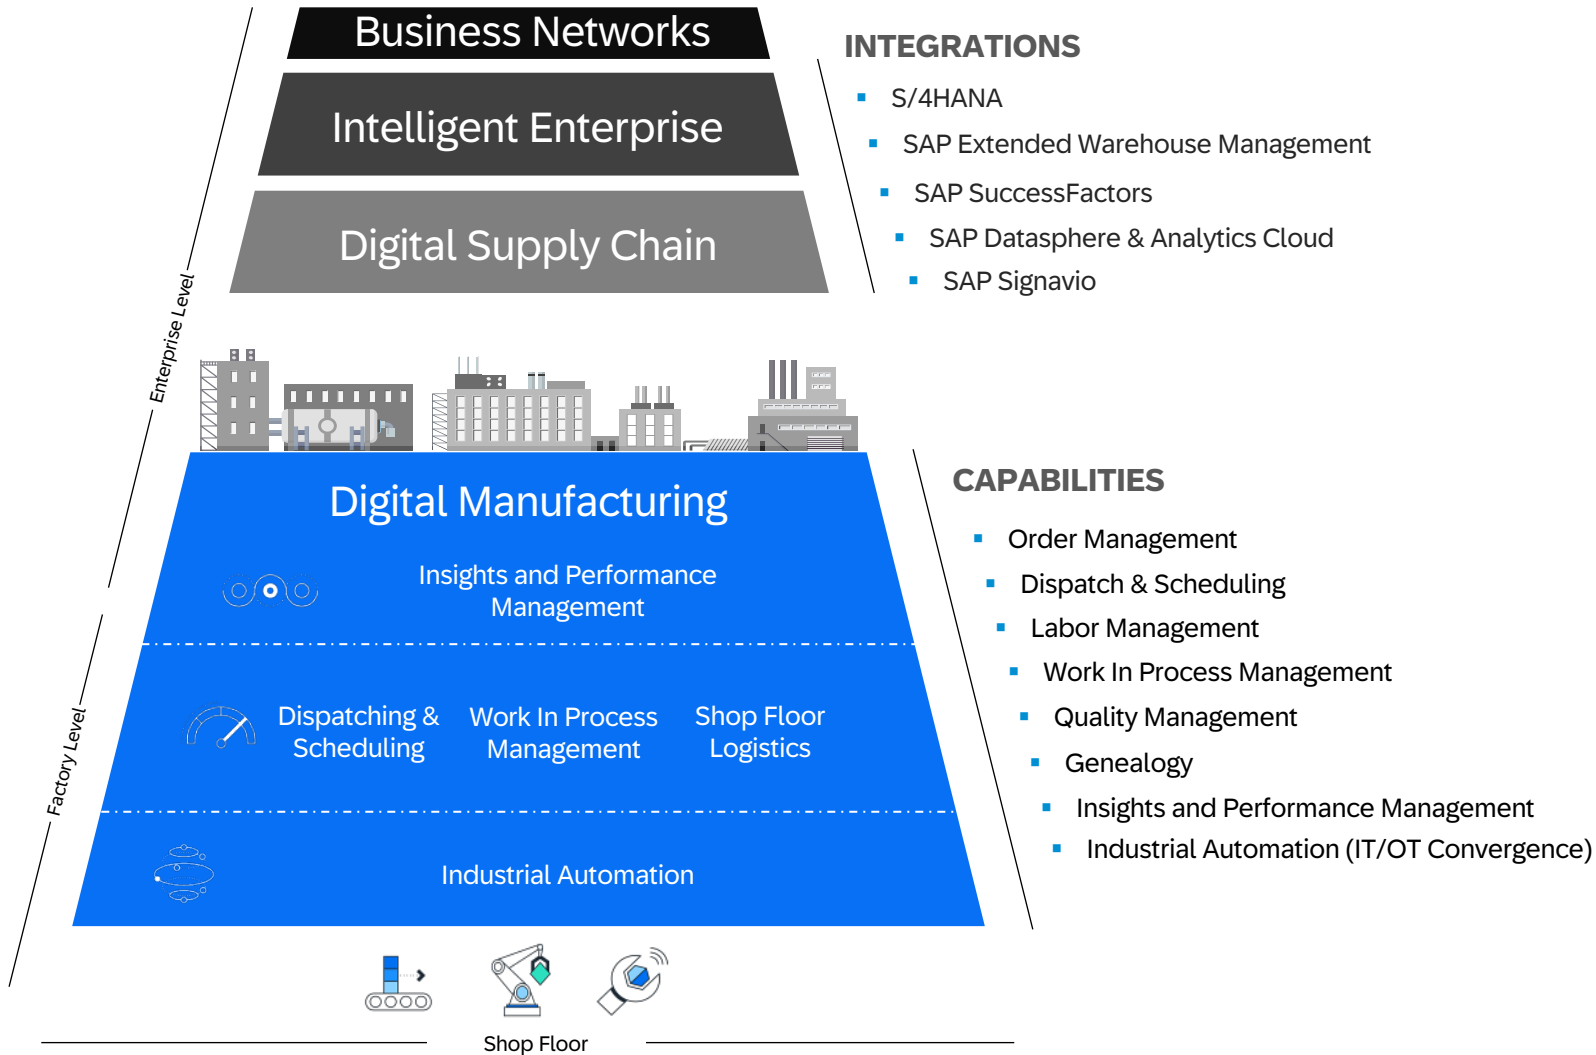

supported by paperless production

Scalability & Agility

through standardized processes and integrated systems

SAP Digital Manufacturing

BUSINESS BENEFITS

Increased Productivity

Streamline and automate manufacturing processes, reducing paper and manual effort and increasing overall productivity

Enhanced Visibility & GMP

Realtime data and insights into the manufacturing performance, track progress, full traceability to make informed decisions and support regulatory requirements

Improved Quality Control

AI-based analysis of manufacturing processes, enabling enhanced product quality, reduced waste, and streamlined operations.

Flexibility and Scalability

Enabling businesses to easily adapt and grow their manufacturing operations in line with changing business needs and market conditions

Selected Digital Manufacturing Successes

Carl Zeiss

Enables the Connected Smart Factory

Customer Profile

Industry: Industrial machinery and components, optics and optoelectronics

Company: ZEISS is an internationally leading technology enterprise operating in the fields of optics and optoelectronics.

Project: IT-DMC Implementation in the Factory in Oberkochen (Germany) by the service partner Syntex

Business Driver

- Innovative strategic Manufacturing Execution System across all Zeiss Business Units supporting the Connected Smart Factory initiative at Zeiss
- Secure and fulfil challenges of the regulated environment
- Scalable application to respond to increasing market demand
- Ensure quick reaction to market and assure quality standards and admission conformity
- Empower the shop floor to run flexible, resilient and competitive manufacturing operations
- Comply to enhanced sustainability strategy and enable production insights with key performance indicators
- Document full production data including machine data acquisition

Solutions:

- SAP Digital Manufacturing Cloud for Execution
- SAP Digital Manufacturing Cloud for Insights

The vision is to live the 'digital mindset' - acting as a fully integrated digitized company.

Siemens Energy

Realizes the goal of the harmonized MES

Customer Profile

Industry: Discrete Manufacturing

Company: Siemens Energy operates globally along nearly the entire energy value chain. Its products include gas turbines, steam turbines, generators, transformers and compressors.

Project: MES/ERP for GasPower, Generation, Transmission and Industrial Applications

Business Driver

- Unified MES for the international production landscape
- Visibility over the entire value flow paperless production processes and improvements of relevant manufacturing KPI's
- Efficient management and monitoring of production work
- Manufacturing information accessible in real time for comprehensive analysis and continuous improvement actions
- Bi-directional connection of OPC UA machine types and in connection with the partner product FORCAM FORCE EDGE also connection of further machine types

Solutions:

- SAP Digital Manufacturing Cloud for Execution
- SAP Digital Manufacturing Cloud for Insights

The goal is to implement one MES across 100+ plants classified into 5 plant clusters. It is about innovation and end-to-end integration covering multiple production scenarios.

Vibracoustic – Industry 4.0 Now

Historic Digital Manufacturing Operations with Global Scope

Customer Profile

Industry: Automotive

Company: Vibracoustic SE (subsidiary of Freudenberg Group) | <https://www.vibracoustic.com/>

Project: Implementation and roll out a global manufacturing operations solution to harmonize processes across all production plants

Business Driver

- Global Testing
 - Optimization of all test trials processes (i.e. structure control)
 - Change production orders, validated and secured in DM, in global and document first execution
 - File is now called to be placed, ongoing
- Global Prototype
 - Collection of prototype manufacturing processes
 - 3D Team used as collaborative and workflow tool to trigger and trigger production orders, supported by 3D Tower Type and ECC and SPC-APL
 - File is now called to be placed, ongoing
- Serial Production
 - Build of customer product from 2023 to 2025 production sites
 - File now used instead of paper from 2023 to 2025 production sites

Solutions:

- SAP ECC (S/4HANA) transition projected over the next 5 years
- SAP Digital Manufacturing Cloud for Execution
- SAP Cloud Platform Enterprise Agreement

Enhancing Productivity and Capacity with SAP Digital Manufacturing at a high-performance computing manufacturer

Eviden, Big Data & Security (BDS)

CHALLENGE:

- Current BDS Angers factory is not able to support the growth forecasted by BDS; production capacity 42 over the next 5 years
- Business challenges include doubling the current productivity capacity with only 30% more staff, 30% maintenance costs, 50% stock mobility, etc.

SOLUTION:

- A market study was conducted, after which the SAP Digital Manufacturing for execution was identified as the best response for BDS given its needs and all IT landscape (SAP S/4HANA)
- Global Supply Chain template enhancement for BDS with possible cloud for any other plant with production/battery activities especially the SAP end-to-end Supply Chain development
- Development of sprint plan (8 sprints) and dedicated work packages

OUTCOME:

- The Project went live in 8 Months on SAP S/4HANA with minimum business downtime
- SAP DMC (SAP Digital Manufacturing Cloud) for Execution
- SAP Fleet based & Embedded SAP Analytics Reporting
- SAP EPD (Enterprise Product Development) Integration

47% Providing expertise for all industries in more than 17 countries

30% Current SAP operational efficiency with direct access to Product & Inventory Related Information

2X Improved data accessibility for faster decision making with SAP Data Hub, Embedded Analytics

Bosch Rexroth

Optimizes production execution and performance

Customer Profile

Industry: Discrete Manufacturing

Company: Bosch Rexroth AG is a part of Robert Bosch Group and is a global assembly-leader, solving safety and control challenges around the world

Project: SAP DMC implementation in Lohr, Germany, and later global roll-out

Business Driver

- Unified MES for the global production sites
- Efficient management and monitoring of production work
- Realtime shop floor connectivity to production systems
- Embedding of highly customized and complex business processes into DMC
- Interaction with legacy MES for end-to-end traceability
- Adaptation of new MES for existing production line, eight workstations, incl. worker guidance for manual assembly, automated test stations, label printing, RFID reader, screwdrivers

Solutions:

- SAP Digital Manufacturing Cloud for Execution
- SAP Digital Manufacturing Cloud for Insights

To set up their manufacturing sites for the future, Bosch Rexroth is replacing its legacy MES with SAP DMC as a state-of-the-art MES solution.

REWE Group – Glockenbrot Bäckerei

Connected and Integrated Bakery Processes

Customer Profile

Industry: Consumer Industries, food production

Company: Glockenbrot Bäckerei is the largest label from second largest food retailer REWE Group with about 3,300 stores in Germany

Project: Implementation of DMC in the business in Frankfurt and Biehlbrunn with a production of 450 tons per day

Business Driver

- Process automation and EZE integration with SAP S/4HANA
- One MES platform across all REWE manufacturing plants
- Manufacturing Execution and Overall Equipment Effectiveness in one solution for the shop floor of the bakery
- Responsive and repetitive design (e.g., POO Designer)
- Scalable intuitive solution, start simple and enhance the solution step by step according to requirements
- The Go-Live for Glockenbrot Bäckerei is planned for October 2023
- First wave in the REWE Group are the bakeries, the second wave targets the meat processing of Brandenburg, which is largest private label supplier in the meat and sausage product range

Solutions:

- SAP Digital Manufacturing Cloud for Execution
- SAP Digital Manufacturing Cloud for Insights

Vision: Harmonized and optimized business processes, supported by an integrated system landscape, make our day-to-day work easier. This allows to work in an interconnected way and to make key decisions to set new production standards together.

Jowat

Creating seamless operations with SAP Digital Manufacturing

Before: Challenges and Opportunities

- Aimed to get a right grip on signing raw materials costs
- Relied on manual, paper based processes to track inventory and raw material consumption
- Used multiple systems to track inventory and production workflow, leading to conflicting sources of information

Why SAP?

- Integrates seamlessly with Jowat's existing SAP S/4HANA, SAP Extended Warehouse Management, and SAP Business Technology Platform
- Ensures Jowat can take advantage of the latest features thanks to the quarterly refresh cycle
- Guidance and expertise provided by consultants from SAP Services and Support

After: Value-Driven Results

- Eliminates manual, paper based processes, helping to reduce errors and improving productivity
- Provides leaders with up-to-the-second insight on inventory, helping to drive smarter purchasing decisions
- Saves workers time on the factory floor so they can focus on creating high-quality products
- Provides granular visibility of production workflow, supporting robust quality control
- Prevents delays in production, empowering Jowat to deliver goods on time to customers
- Opens the door to future innovation with artificial intelligence and Internet of Things technologies

100% Inventory accuracy

3 Hours per day a week saved by automating raw material consumption updates

100% SAP S/4HANA, SAP Extended Warehouse Management, SAP Business Technology Platform, SAP Services and Support

Accelerating the Global Transition to Renewable Energies

SMA Solar Technology AG

CHALLENGE:

- The in-house developed manufacturing execution system (MES) landscape has evolved over the last 40 years. In return, future development of solar production have become limited due to complex interfaces, low performance, and expiring maintenance intervals of solutions installed on-site
- The aging system posed a major challenge to the competitive delivery of the latest solar technology innovations in a new SMA Oligast Factory. Risks included production downtime resulting in frustrated employees, high logistic costs, unsatisfactory inventory management, and a lack of process transparency

SOLUTION:

- SMA initiated the modernization of its operations by establishing a cloud foundation that includes SAP S/4HANA Cloud Private Edition integrated with the SAP Digital Manufacturing solution and various SAP and third-party solutions. Guided by the expertise of the Cloud Success Services team from SAP, the transition was supported by a selective data migration, strategic prioritization of process improvements, and a focus on standardization
- SMA continues to enhance its digital capabilities on the integrated platform. Plans include work for collaboration, transportation management, and logistics, and integrated business planning

OUTCOME:

- The project is already delivering impressive results, boosting supply chain productivity, reducing inventory carrying costs, and decreasing days in inventory. The initiative will also help streamline supply-chain planning costs and total logistics costs decrease. The initiative will also help streamline transportation planning, curb freight spending, and establish a collaborative partner portal. Additionally, the real-time visibility the platform provides can help improve transparency into order statuses while supporting connected devices in the yard. Overall, these outcomes signify an enhancement in operational efficiency across various facets of the organization

15% Increase in supply-chain workforce productivity

10% Improvement in overall supply-chain planning costs

10% Reduction in inventory carrying costs and stock turnover rate

Schwarz Produktion – Digital Factory

BauBridges, Nut Slices

Customer Profile

Industry: Consumer Products – Coffee Roasting

Company: Schwarz Produktion (part of Schwarz Group) | <https://www.schwarzproduktion.com/>

Project: Greenfield coffee factory 'Star Press' in Rhein (Germany)

Business Drivers

- Smart production and process order execution
- Shopfloor performance management, machine and the monitoring
- Realtime shop floor connectivity to production systems
- Digitization of quality management
- Automated Production Processes
- Paperless shopfloor and operator guidance
- Shop floor stock management in sync with SAP EWM
- Realtime integration to SAP ECC, SAP EWM
- Integrated Dynamic Asset Performance Management with Maintenance and Service processes and Parts

Solutions:

- SAP Digital Manufacturing Cloud for Execution
- SAP Intelligent Asset Management
- SAP Extended Warehouse Management

All production and asset management processes can be executed, running on SAP Industry Cloud Solutions. Schwarz is now able to significantly reduce their TCO and increase the efficiency of operations in the coffee plant contributing to the goals of their digital strategy.

Smart Press Shop – Industry 4.0

The Smart Press Plant

Customer Profile

Industry: Automotive

Company: Smart Press Shop GmbH & Co. KG (Joint Venture of Fraunhofer AG and Schuler AG) | <https://www.sps-shop.com/>

Project: Greenfield factory between Halle and Leipzig (Germany) with latest hardware and software (100% Cloud)

Business Drivers

- Smart Features
 - Paperless production
 - Fully automated setup process with press tool provisioning, allowing the competitive production of small batches
 - Press tools are digitally connected to press
 - Processes are supported digitally to the maximum
 - Continuous transparency from the raw material to the body part
- Sustainability
 - Lightweight tank (CO2 saving)
 - Integration with 100% green electricity and gas
- AI fully supported by SAP Cloud Products

Solutions:

- SAP S/4HANA Cloud Essentials
- SAP Digital Manufacturing Cloud for Execution
- SAP Cloud Platform Enterprise Agreement

"We were looking for a modern cloud solution for our IT. SAP Digital Manufacturing Cloud connected us in the end with its modern cloud architecture and modern user interface. We also appreciate that SAP Digital Manufacturing Cloud will develop quickly and expand further functions. We will benefit from this through the frequent updates and therefore always have the most up-to-date system"

Manufacturing digitalization with SAP DM

ABB Drive Products

CHALLENGE:

- In the context of operations digitalization, challenge is to find a solution that meets evolving Smart Factory requirements which will help accommodate these requirements in simpler and faster fashion
- Current complexity of the user interface for end users without integration to quality and last time cost processes, directly impacts production input. A simple method to connect and master shop floor automation systems and tools such as robots, torque tools, wave systems, and jack-to-light systems were missing, resulting in a fragmented manufacturing process. One of the key challenges has been to visualize end to end process and measure real-time KPI's

SOLUTION:

- Utilizing SAP Digital manufacturing, SAP Business Technology Platform (BTP), and Cloud connectivity technologies ABB was able to build modern intuitive user interfaces to simplify interactions for operators, implement quality control process with real time equipment integration (has scaled to shop floor to multiple global locations). SAP integration has enabled efficient communication within Manufacturing Execution System (MES) and ERP and other 3rd party systems
- Leveraging Manufacturing Insights combined with PowerBI solution, fire saving improved visibility

OUTCOME:

- The project successfully replaced the old platform with modern systems and the latest technologies, leading to improvement in production productivity and quality. This modernization not only enhanced user satisfaction by providing a more intuitive and efficient user experience but also improved factory connectivity. The advanced connectivity enables real time visibility, allowing for more dynamic and responsive production processes. These outcomes collectively marked a substantial step forward in the organization's operational efficiency, customer perceived quality, and technological advancement, setting a new standard for its manufacturing capabilities

~40% Increase in production yield to one production line (6 month after implementation)

4x Shorter onboarding and learning curve for new production workers

>70% Increase in Operator satisfaction

Global Growth Plan driven by Digital Transformation

Zero Motorcycles

CHALLENGE:

- Established processes were not able to support the growth of business. Orders were not fulfilled on-time and as a result the forecast was inaccurate and growth targets were missed
- Zero Motorcycles struggled to track production and inventory on hand did not reflect actuals. Customer satisfaction was on the decline and a fragmented technology landscape further slowed down operations and the business's ability to address customer needs

SOLUTION:

- Using SAP Best Practices and P2 to Standard approach for manufacturing, a new state-of-the-art, cloud-based solution was quickly available to meet their needs
- Efficient and highly integrated processes can be implemented using SAP S/4HANA integrated with SAP Digital Manufacturing, SAP Integrated Business Planning, SAP Ariba, and SAP PLM. This improved visibility to operational actuals, plan, inventory, inventory quality, and cost

OUTCOME:

- The simplified system landscape reduced cost of ownership of the end-to-end system and provided a single system of record. Master data is centrally maintained for all processes, avoiding redundant maintenance and ensuring consistency and integrity in processes. The landscape fully supports future growth initiatives and digital expansion of Zero Motorcycles into international markets. Harmonized processes are streamlined, and easier and quicker to connect. These benefits combined position Zero Motorcycles as a leader in their industry

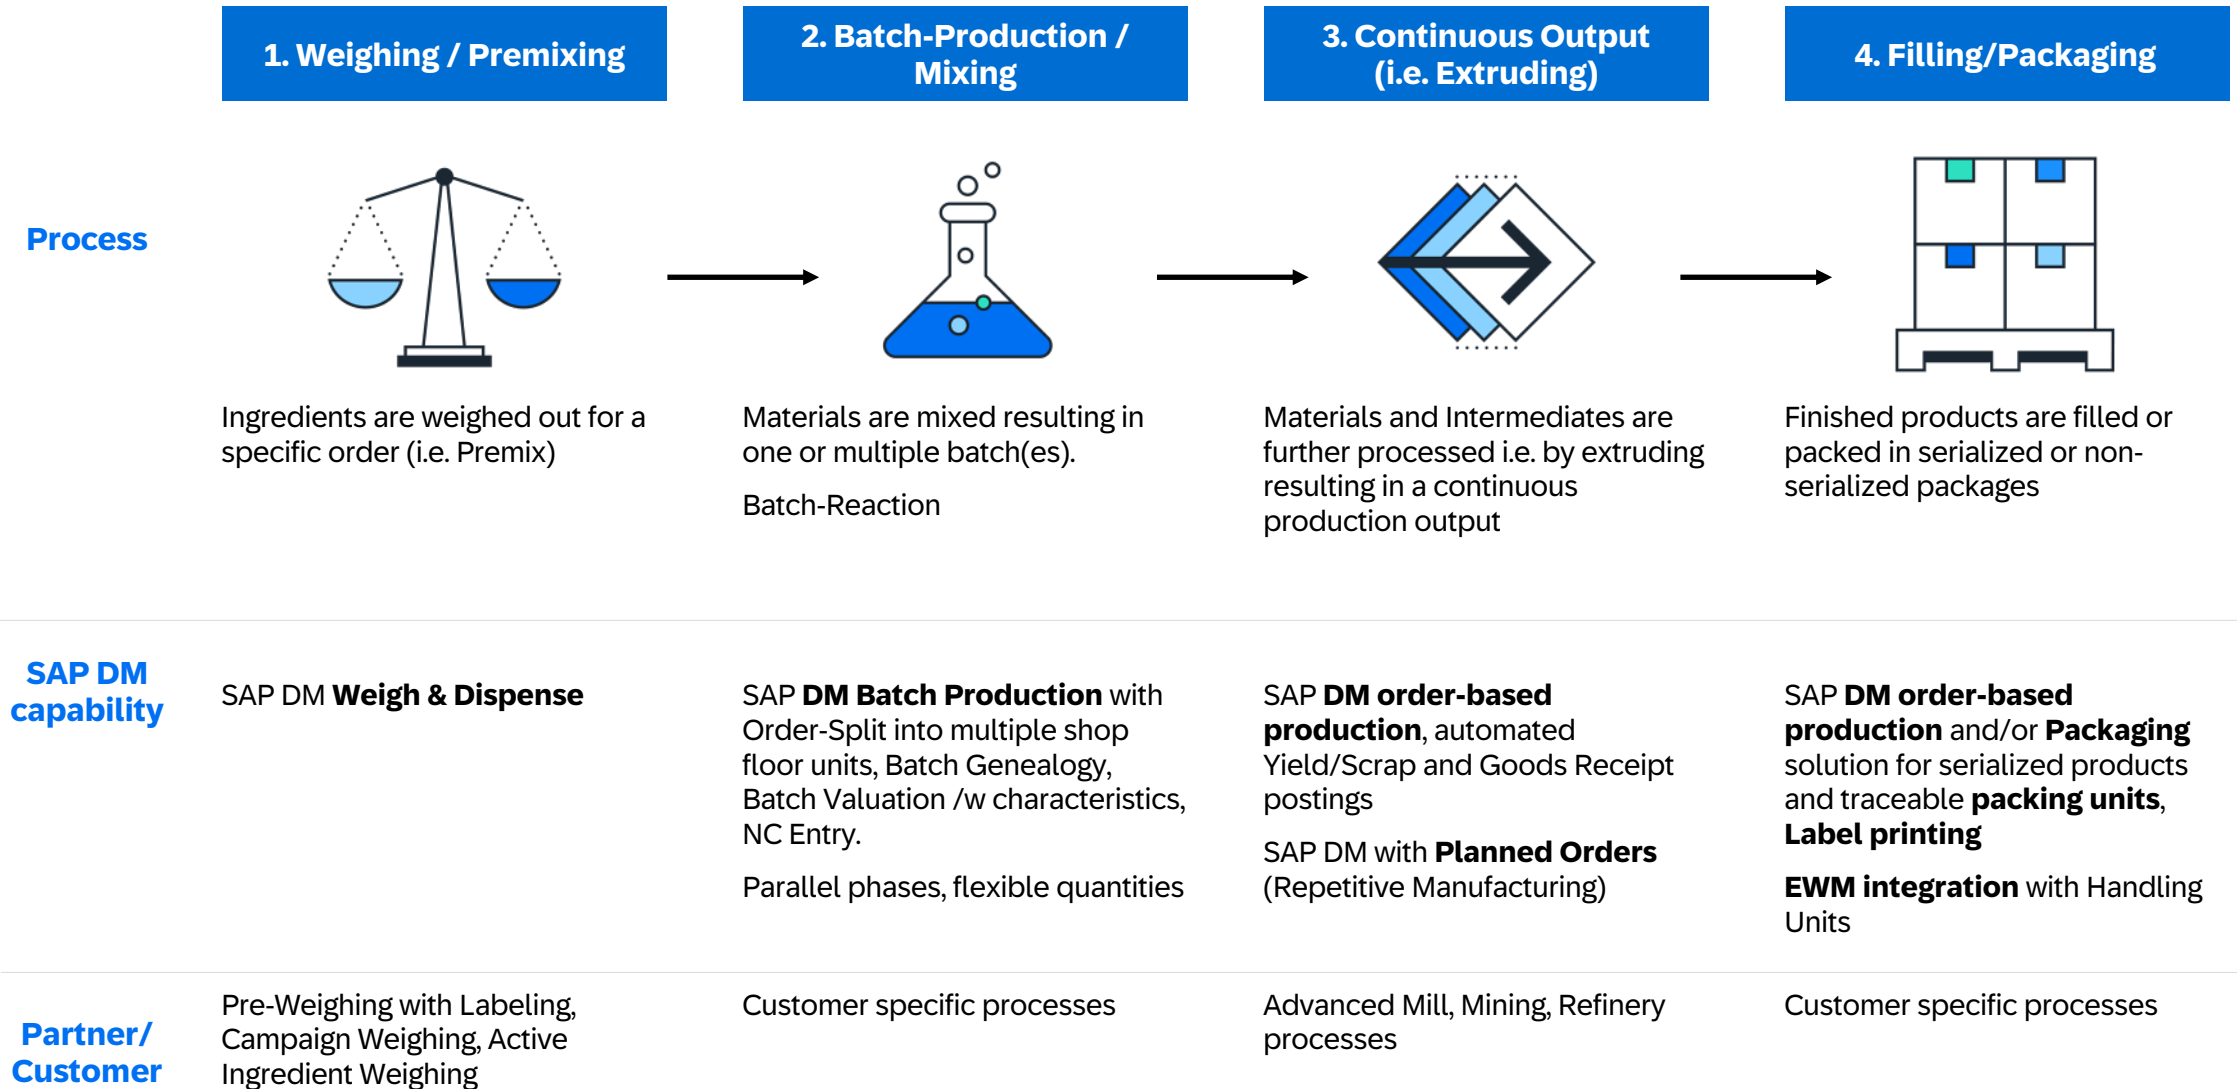

2x Faster Physical Inventory

95% On-peak to Cloud Transformation

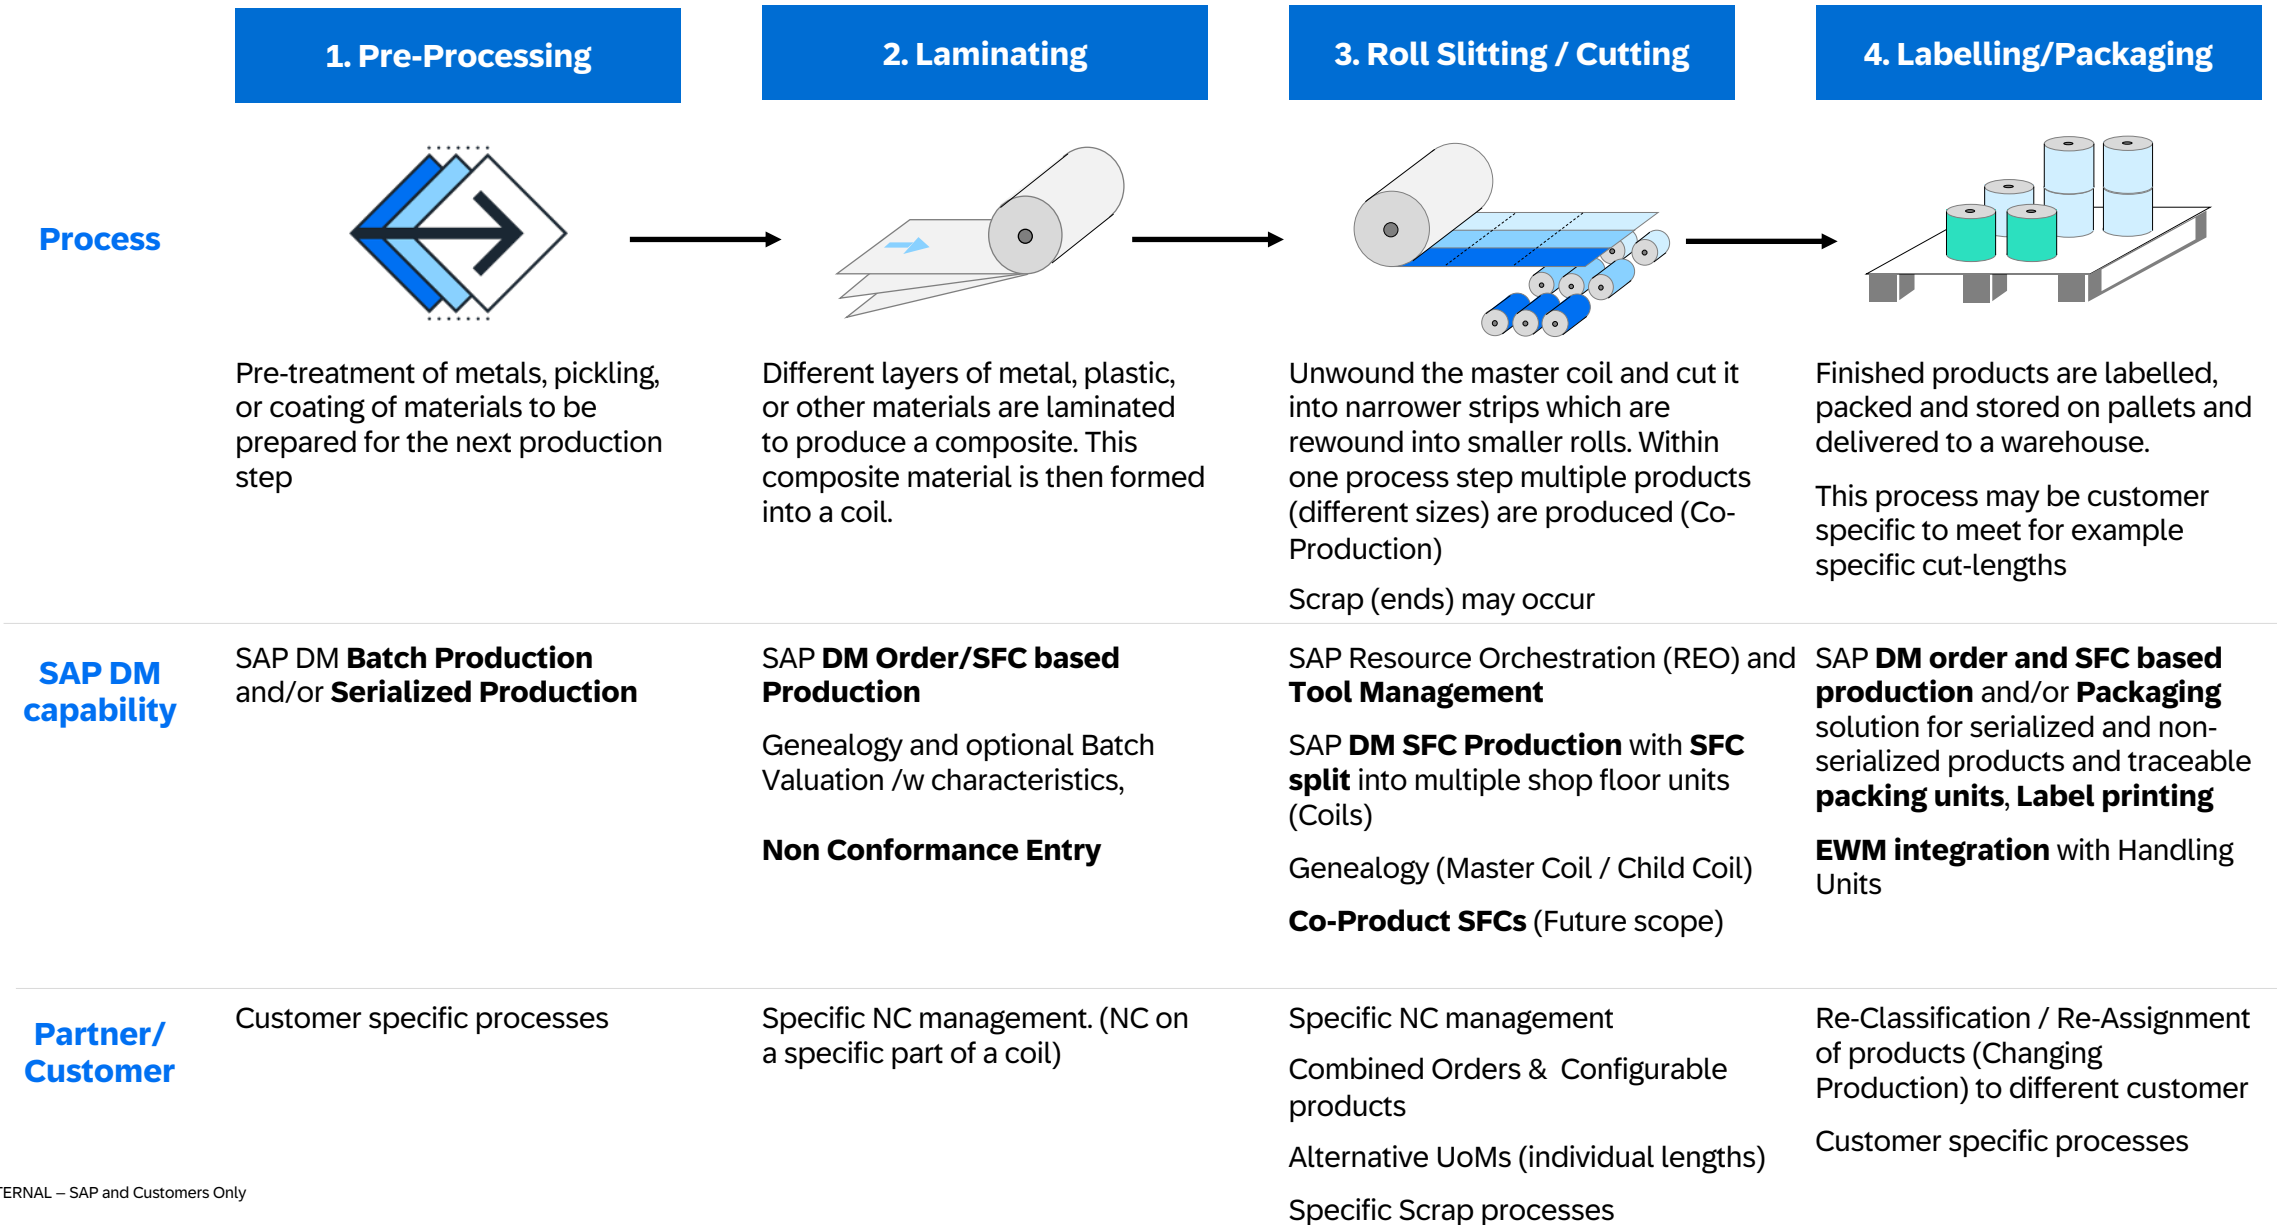

4→1 Full Consolidation from 4 to 1 System of Record
