# SAP Digital Manufacturing Cloud for Insights

Digital system to gain real-time visibility of production performance with business context across the enterprise

## Key capabilities

- Gain insights on performance and productivity across different levels of the enterprise hierarchy (i.e. across regions, plants, work centers, resources, etc.)
- Take informed decisions by combining and utilizing data from shop floor systems, execution systems, along with contextual information from business sources (i.e. ERP)
- Use pre-delivered interactive dashboards filled with standardized key performance indicators (KPI) based on harmonized data
- Incorporate data from non-SAP sources, build customized KPI's and personalize your dashboards & reports
- Perform root cause analysis, drill -down and -up across different levels of the enterprise hierarchy

# SAP Digital Manufacturing Cloud for Execution – Process Industries

Orchestrate and control the shop floor

## Key capabilities

- Implement top-floor to shop-floor scenarios to achieve rapid return-on-investment through **out-of-the-box integration to SAP solutions**
- Utilize **intuitive user interfaces** for production operators and transform to paperless production
- **Dispatch and sequence operations** to reflect the real world in the short term
- **Execute process orders** in Order POD
- **Monitor** the entire manufacturing process to optimize resources and execution
- **Integrate seamlessly** with S/4HANA Cloud and S/4HANA on-premise

# SAP Digital Manufacturing Cloud for Execution

## Main Capabilities

- **Extend Master Recipes** integrated from S/4HANA with Work Instructions, Data Collections and Process Parameters
- **Execute batch-related Process Orders** in the Production Order Dashboard (POD)
- **Create and Value Batches** for Main-Products as well as for **Co-Products and By-Products** during Production and search and **Consume batches** based on characteristics
- **Confirm process order phases** with Yield, Scrap and Activities integrated with S/4HANA
- Post **goods movements** for goods issues and receipts seamlessly integrated with S/4HANA
- **Record inspection results** integrated with S/4HANA QM
- **Integrate with the Shop Floor** in a **bi-directional** way using Equipment Connectivity (Production Process Designer) and Plant Connectivity (PCo)
- Enable **Post-Production Reporting**
- **Customize** your application with the POD Designer
- Print customized **Labels**
- **View product history report** for produced batches

## Product road map overview

[SAP Roadmap Viewer](#)

1. This is the current state of planning and may be changed by SAP at any time without notice.

# SAP Digital Manufacturing Execution - Summary

## Statement of direction for process industries

- ❑ SAP has decided to build a new Manufacturing Execution Solution for the Process Industries. The new key capabilities will be delivered as part of the SAP Digital Manufacturing Cloud (DMC) for execution
- ❑ SAP plans to offer new state of the art capabilities in the cloud to manage recipes, enriching them with execution relevant information like process parameters / setpoints, work instruction, data collection and supporting manual and automated manufacturing execution outside of S/4HANA.
- ❑ While PI-Sheets, Control Recipes, XSteps, and Process Messages are still available in S/4HANA On-Premise and S/4HANA Private Cloud Edition, there is no further development planned. These functions are part of S/4HANA On-Premise Compatibility Scope, **but will receive extended use rights until 2030 to enable a smooth migration to alternative solutions such as SAP DMC**. For details on compatibility scope, please refer to note [2269324](#) and notes referenced therein.
- ❑ Those PI-PCS interface functions (including Xsteps) relevant for integration with external systems are planned to become part of S/4HANA On-Premise as *Manufacturing Execution Connect (classic)*. See note [3035702](#) and related notes. Modern APIs and OData services are already available as alternatives for PI-PCS in S/4HANA. In addition, SAP is planning to provide “Distributed Manufacturing” functionality as part of SAP DMC.
- ❑ SAP DMC is proposed as alternative for the PI-Sheet. Portfolio items to deliver Process Industry capabilities are already shipped with SAP DMC. More details and updates are published frequently in the official [Roadmap](#) communications.
- ❑ SAP is evaluating how to support GxP requirements for its Cloud products.

# Manufacturing Quality

Increase planning security

Reduce efforts to enhance  
out-of-spec output into spec

Increase  
customer satisfaction

Understand pattern  
behind out-of-spec

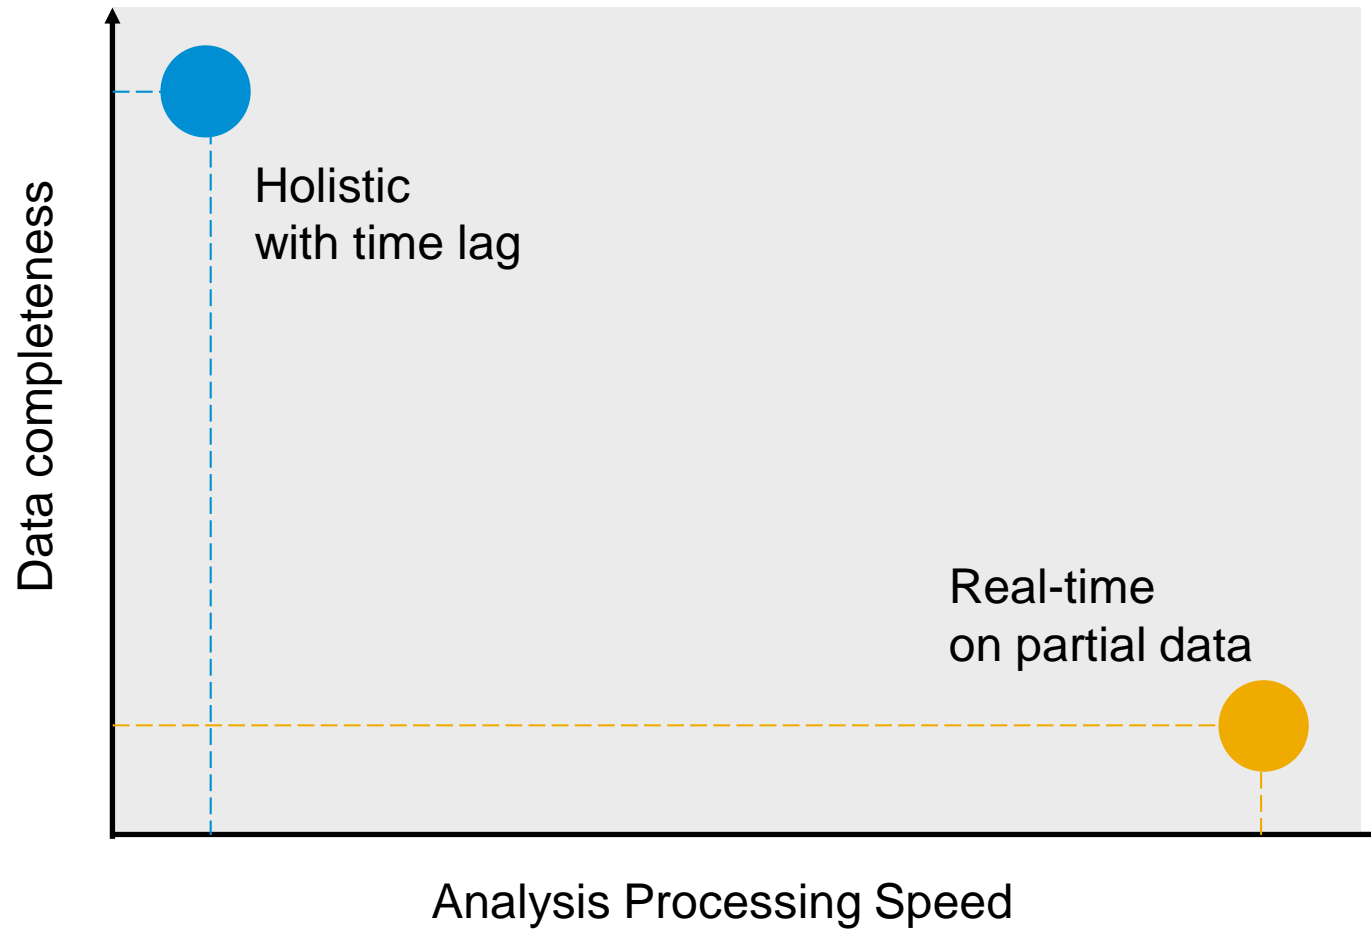

Reduce out-of-spec

Take pro-active action  
during manufacturing

Reduce wastage

Identify relevant sensors  
on the shop floor

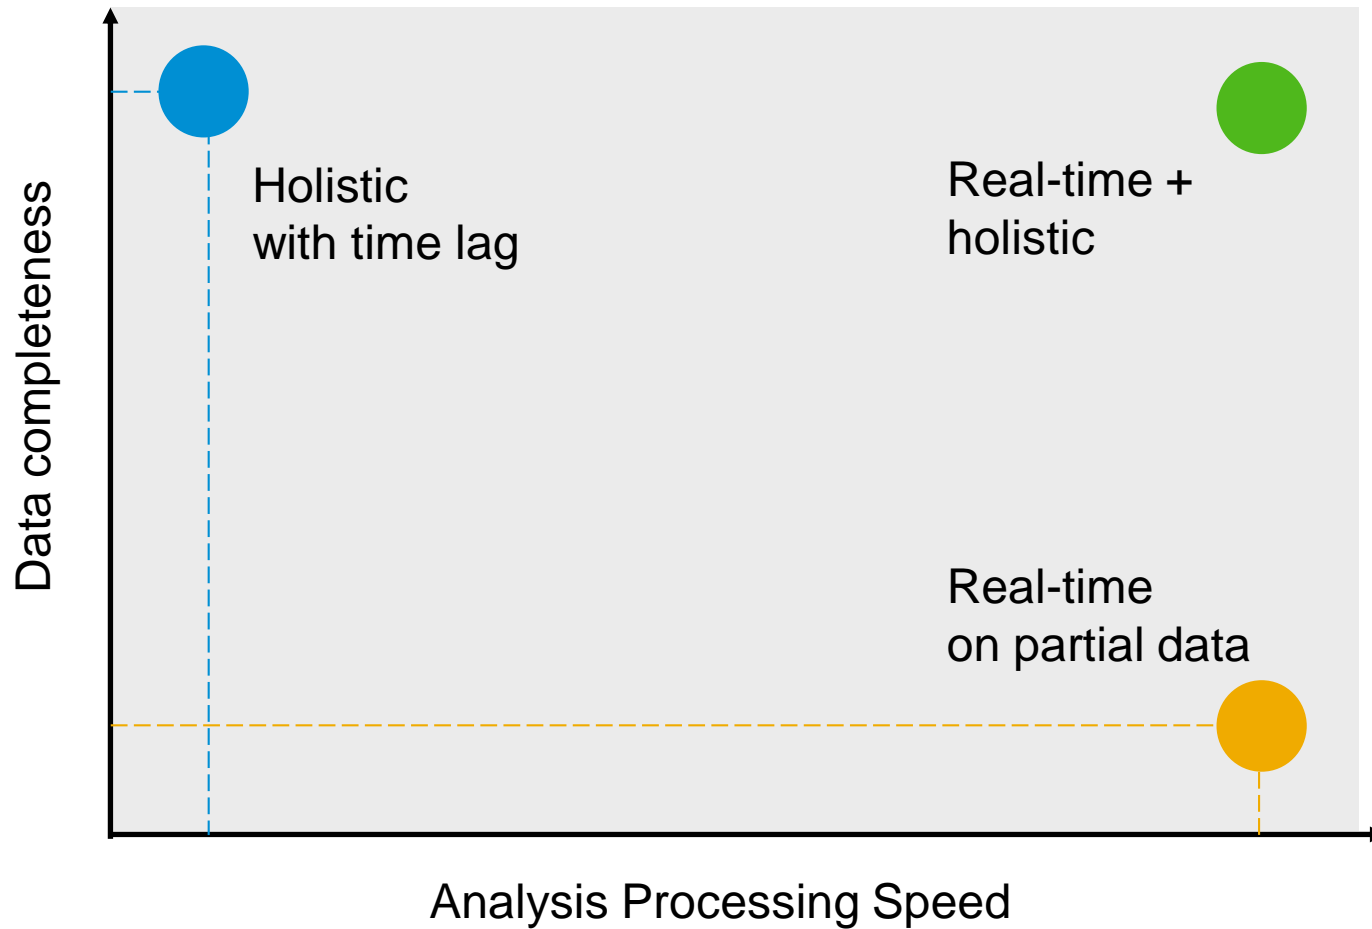

# Manufacturing Quality

**Analysing Manufacturing Quality is often a compromise for Manufacturers**

- **Holistic:** sensor + ERP with delay
- **Real-time:** sensors only

# Manufacturing Quality

**Analysing Manufacturing Quality is often a compromise for Manufacturers**

- **Holistic:** sensor + ERP with delay
- **Real-time:** sensors only
- **SAP Business Technology Platform:** sensors + ERP in real-time

# Manufacturing Quality

## Exemplary use case for SAP's Business Technology Platform

- Advise in real-time
- Apply Machine Learning
- Merge the data source

### Production plant

- Sensor data

### SAP ERP

- Historic quality data
- Raw materials
- Supplier details

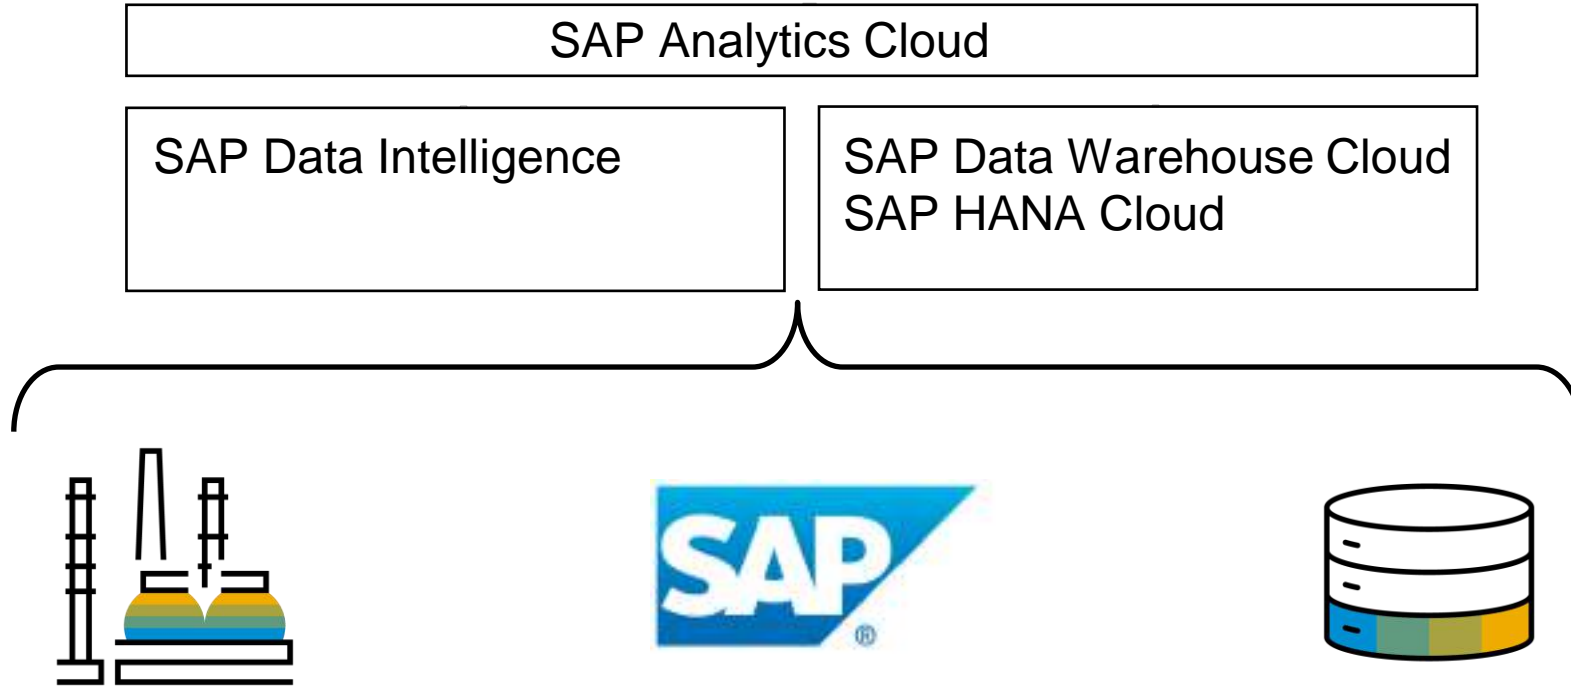

### Further data sources

- ...

# Manufacturing Quality

Analyse, predict and take preventive measures in real-time

BUSINESS TECHNOLOGY PLATFORM

# Business Technology Platform

# Interested in some hands-on experience?

## Predictive Quality Workshop

Remote collaboration

½- 1 Day

Free of charge, limited seats

### Purpose

- Experience how the SAP Business Technology Platform creates value out of data assets in manufacturing
- Predict whether the quality of a Polymer manufacturing batch will be in- or out-of-spec
- Follow a step-by-step instruction in a live system (Python in Jupyter Notebooks) guided by an expert

### Attendees

- Business & Data Analysts
- Data Engineers & IT Architects
- SAP experts new to Data Science
- Data Scientist new to SAP functionalities

### Tools

- SAP Data Intelligence
- SAP HANA Cloud
- Automated Predictive Library (APL)

### Outcome

- Raise Technology Awareness via manufacturing use case
- Hands-On experience with advanced analytics

# Thank you.
