

THE TRIM-GUIDE: THE CHECKLIST FOR YOUR OPTIMAL TRIM SOLUTION

When you're searching for a trim optimization solution for your business, there are all kinds of factors to consider. We've summarized the important aspects for you in this checklist. Use it as a starting point for your search.

Big Picture

- Do you cut reels, sheets or both within your production process?
- Do you produce mother/jumbo reels yourself?
- Do you track defects in the reels you use?
- How much man-power is currently consumed in your current process (e.g. manual cut-planning, reworking results from your current trim application)?
- Which aspects need to be considered when finding an optimal solution? Simply reducing waste or considering a mix of waste, yield, setup time and various other aspects as they are needed?

Planning

- Do you need the option to automatically as well as manually optimize your slitting plan?
- Do you purchase reels of various dimensions and need your trim optimization solution to make the best use of the dimensions available?
- Do you need to consider tolerances (in quantity or dimensions), specified by your customers?
- Do you wish to drastically reduce waste by optimizing around defects in the raw material?
- Is setup time an unproductive time and need to be considered as part of the optimization? Do you need a solution that can reduce total waste across a single or multiple step slitting and cutting process?

Technical

- Considering integration with your current planning tool and ERP system, is stability of the trim tool with the system important?
- Considering integration with your current planning tool and ERP system, is flexibility within the system important for the trim tool? For example, can you add additional requirements from production execution on the short term?
- Does your trim application need to consider all restrictions (from the customer, equipment and/or storage) to create a robust and optimized cutting plan?
- Do you need the ability to enhance your trim application using well-known extensions and options (e.g. user-exits, customer functions or BADIs)?
- Do you need a solution which can handle work centers with only simplex work center? Or do you need a solution which can handle duplex or multiplex work centers?

With TRIM SUITE from T.CON, you can cover each of the listed aspects in the checklist. You set the requirements for the trim solution - we deliver the optimal solution.

That's the TRIM SUITE

Model your order-to-cash process for reel-based products fully within the standards from start to finish by combining TRIM SUITE with PP/DS (APO) and T.CON's MES CAT. TRIM SUITE is very easy to use. You can launch the automated optimization with just one click. Alternatively, let TRIM SUITE generate a whole set of optimization scenarios, then choose the best solution. Multiple orders are combined into blocks for scheduling: That doesn't mean you lose the information about individual orders, it's still available, but the orders are treated as a block when scheduling the next steps, e.g. coating or slitting in APO.

FEATURES:

- Single or multi-stage optimization
- Incorporate inventory and warehouse information
- Automatic optimization
- Quality trim adjusts for errors in inventory
- Intuitive user interface

TRIM SUITE certified by SAP.

T.CON's in-house development TRIM Software, which sets new standards for optimizing cutting waste, has been certified by SAP SE. The "SAP Integration and Certification Center (SAP ICC)" has certified that TRIM SUITE 2.0 can be fully integrated into SAP S/4HANA using standard technologies. The TRIM SUITE helps businesses to create optimized cutting schedules from within the SAP System's detailed planning (ERP or SCM) – without an interface.

SAP® Certified Integration with SAP S/4HANA®

With TRIM SUITE from T.CON we can cover every single aspect covered in the checklist. You decide which requirements you need from a Trim solution – and we deliver the optimal solution.

Arrange a demo with us today! We will use your data, machine information and orders, and show you how quickly and easily production optimization can be achieved with TRIM SUITE. Together with you, we will explore the right path and the correct strategy for your new trim optimization solution.
