The European Climate Research Alliance (ECRA) unites top climate research institutes and universities across Europe to improve our understanding of the complex climate system and provides policymakers with the necessary information to develop effective policies to mitigate and adapt to climate change.

ECRA's vision is to support and promote high-quality climate research and to ensure that outcomes inform effective policy development to mitigate and adapt to climate change.

Our website offers relevant information on climate science, including topics such as climate modelling, observations, and impacts on regions or sectors such as Polar climate, Hydrological Cycle, High Impact Events, and Sea Level Rise. We aim to promote interdisciplinary collaborations and link European research organizations with the European Union's framework for science funding, decision-making, and networking.

To achieve this, we publish White Papers that provide a comprehensive overview of the current state of climate science aspects, the potential impact of climate change on various regions and sectors, and propose research priorities to advance our understanding of climate change and inform policy decisions. Our White Papers serve as a valuable resource for researchers, policymakers, and stakeholders interested in advancing our understanding of climate change and developing effective strategies to mitigate its impacts.

*SAVE THE DATE: 5. & 6.03.2024 General Assembly in Brussels*
