

Dr. Itumeleng Molefe is a Senior lecturer in the Division of Forensic Medicine and Toxicology, University of Cape Town (UCT), Faculty of Health Sciences and is a Researcher in and the Co-Director of the Neuroscience Institute Brain Bank project. She holds the following qualifications from UCT: MBChB (2001), Post-graduate Diploma in Health Professional Education (PG Dip HPE) (2012) and Masters in Forensic Pathology (MMed For Path) (2016); and from the Colleges of Medicine of South Africa (CMSA): Diploma in Forensic Medicine- Clin/Path (2007) and Fellowship in Forensic Pathology (FC For Path) (2010). The topic of her MMed thesis is Violence Against Women: Epidemiology and Pathology of Femicides and Suspected Sexual Homicides in Cape Town: A 10-Year Follow-Up Study. She is currently involved in both teaching within and oversight of Undergraduate and Postgraduate courses. Her personal statement is as follows: *Repeated brain injury causes a health disparity that promotes a cycle of violence and affects the entire family structure, and the whole of society. Prevention requires understanding risks and accurate diagnosis of traumatic brain injury.*
