Working Group 9.4

18th Conference of the
International Federation for
Information Processing
(IFIP WG 9.4)

2024
20 -22 MAY
Cape Town, South Africa

PROGRAMME

Host: University of Cape Town, South Africa

PREFACE

In a world where digital technologies have become the linchpin of global progress, a stark reality has emerged: a society characterised by inequalities and injustice. South African President Cyril Ramaphosa underscored the glaring inequality in the distribution of essential resources, as exemplified by the unequal access to COVID-19 vaccines, during the New Global Financing Pact summit in Paris, France, in June 2023. It serves as a reminder of the enduring disparities that define our world.

Digital technologies remain a force with the potential to disrupt existing power structures and democratise access to opportunities. They have empowered communities to engage in social, political, and economic spheres that were once out of reach. The impact of digital technologies has extended to catalysing global social justice movements and creating platforms for marginalised voices. Yet, the transformative potential of technology is nuanced and replete with complexities.

The 18th Working Group 9.4 Conference of the International Federation for Information Processing (IFIP WG 9.4) gathered scholars and practitioners dealing with how ICT affects social development. The conference theme, **"Reshaping an Unequal World Through Social Justice and Digital Technologies,"** aimed to initiate the journey to explore digital technology's multifaceted role in forging a more equitable and just world. The conference provided a platform for rigorous discourse, innovative solutions, and collaborative endeavors that leverage the potential of digital technologies to tackle global inequalities and champion social justice. The conference invited submissions of full research papers and short papers to the following 15 tracks:

1. Artificial Intelligence, Inequalities, and Human Rights
2. Technology & Social Justice
3. Diverse and Inclusive Digital Transformation
4. ICT in Displacement and Conflict Zones: Ideas, Disconnects, & Innovations
5. Giving Voice to Marginalised Perspectives in IS Research
6. Human-Computer Interaction for Ethical Value Exchange and Social Inclusion
7. Smart Collaborations & Crowdsourcing
8. Philosophical, Theoretical and Methodological Approaches to Researching ICT4D
9. ICT Curriculum and Education
10. Information and Computer Security
11. Digital Inclusion through e-Government
12. Research in Indigenous African Languages
13. Digitalisation for Indigenous Emancipation
14. Digital Platforms in the Global South
15. General Track

One hundred seven (107) full papers were submitted by the deadline. Full-paper submissions were subjected to double-blind reviews by at least three reviewers, of which 58 full papers and six (6) short papers were accepted for publication after revisions were made as suggested by reviewers. Accepted papers were published in the Springer conference proceedings and made available in SpringerLink after the conference, with authors receiving personal access links.
