

Frederic Boal

Dr Frederic Boal is an INSERM Researcher at the I2MC in Toulouse, France. After completing a PhD in Cellular and Molecular Biology at Bordeaux University in 2006, during which he studied the molecular mechanisms regulating insulin secretion by beta-pancreatic cells, he next specialised in the role of phosphoinositides in the regulation of cellular trafficking, specifically in post-Golgi and endosomal sorting. In 2012, he joined the I2MC to study phosphoinositides and their metabolising enzymes in myocardial remodelling during heart failure.
