

Gabriele Schiattarella

Gabriele Schiattarella is an MD PhD cardiologist-scientist and Professor of Cardiometabolic Diseases at Deutsches Herzzentrum der Charité (DHZC) – Charité–Universitätsmedizin Berlin and the Max Delbrück Center for Molecular Medicine (MDC) in Berlin. His research explores the molecular drivers of heart failure, particularly HFpEF, and cardiometabolic disease, with a focus on interorgan crosstalk involving the heart, liver, and adipose tissue. Using integrative systems biology and experimental models, his group aims to uncover novel therapeutic targets and advance precision medicine in cardiovascular disease.
